- .The following pages present substantially my Doctorate Thesis submitted in 1924, and embody the results of my long-continued efforts to bring together in a concise form the speculations of the Hindu grammarians determining the scope, the function, the definitions of grammatical concepts and the value of grammar as a distinct branch of Sanskrit learning. The systematic study of the purely philosophical aspect of Sanskrit grammar as attempted in this book is, I believe, a long-felt want.' The idea of preparing a comprehensive account of these speculations, based on different treatises on grammar, specially on the Mahabhasya and the Vākyapadīya, was first suggested to me by the late lamented Sir Asutosh Mookerjee, and I can well imagine how pleased he would have been had he been alive to-day to see in print the work inspired by him. It may be stated here that I have endeavoured to the best of my powers to represent the grammatical speculations of the Hindus in their true significance without unnecessarily amplifying them. I hope that the speculations contained in

I hope that the speculations contained in this book will serve to show that grammar in Sanskrit literature was not a mere by-product of scholarship; on the contrary, it was elevated to the dignity of *Smṛti* and *Agama* and considered a system by itself broadbased on philosophical principles.

I take this opportunity of acknowledging my gratefulness to Sir Devaprasad Sarvadhikari, for the encouragement I have all along received from him from the very inception of this work.

I am much indebted to my esteemed friend and colleague Mr. Sailendranath Mitra, who has read the book in proof and has helped me from time to time with his valuable suggestions. I have also profited by discussing with Mr. Kshitish Chandra Chatterjee, Lecturer in Sanskrit and Comparative Philology, some of the points treated in the book.

The index is entirely the work of my pupil Mr. Chintaharan Chakrabarti, Kāvyatīrtha, M.A., Lecturer Bethune College, Calcutta, who is a keen student of ancient Indian history and culture.

My thanks are due to Mr. Jogesh Chandra Chakravorti, M.A., Assistant Registrar, for his uniform kindness and courtesy.

Mr. Atul Chandra Ghatak, M.A., Superintendent, Calcutta University Press, has helped me in all possible ways in seeing the book through the press, and to him I am much indebted for the keen interest he always took in the progress of the work.

THE PHILOSOPHY OF SANSKRIT GRAMMAR

CHAPTER I

INTRODUCTORY

Evolution of Sanskrit Grammar—Grammatical speculations—Ancient grammarians—Yāska, Vyādi, Vājapyāyana, Pānim, etc.

The history of the origin of Sanskrit Grammar affords a difficult field of study. It is not possible to say anything definitely either about the period when speculations of a grammatical nature had really come into existence, or about the ancient teacher who might be credited with having for the first time assimilated the principle of a regular system of grammar. An attempt is, however, made here to discuss some of the most plausible views on the evolution of Sanskrit Grammar.

Sanskrit Language, though no longer a spoken tongue, has got such a vast stock of words, and contributed so largely to the real knowledge of the intellectual world by its monumental productions, that it can defy any language ever known to the philological world. The refinement of thought, the melody of

intonation and the unsurpassably high order of spiritual and religious speculations that breathe through this :"Divine tongue," reveal to us not only the intellectual capacity of the Indo-Aryans who made wonderful progress in civilization, but also serve to show the extent of perfection to which the Indian mind had developed in those primitive days. Let us begin with the first intellectual unfolding of the Indian mindthe Vedas, which are regarded either as a symbol of eternity, or as revelations of eternal truth finding audible expression through the utterances of ancient seers. The Vedas never represent, as some Western scholars have opined, a huge collection of "pastoral songs." But what is true is that they are a sublime embodiment of wisdom. It may be stated without hesitation that the four Vedas with all their subsidiary literature are in reality an encyclopædia of human knowledge. Through centuries they continued to be the sacred storehouse of knowledge, and their authority, in matters both religious and secular, was so great with the ancient Hindus that any idea running counter to the Vedic injunctions was liable to be rejected. In the creative period of the Vedic literature we find, among other things of purely sacrificial and religious interest, the brilliant dawns of many speculations which were popularised and co-ordinated into a coherent system of thought by later thinkers. It can consequently be maintained that the Vedic literature, revealing as

it does, in a crude form, the intellectual horizon of our ancient forefathers, provided ample room for the subsequent development of different branches of science and art. There was a time in ancient India when by 'learning' people used to understand only the Vedic learning ('वेदविद्या'),1 and a man's education was not complete until he had acquired a thorough knowledge of the Vedas. The time has much changed since then and the ordinance of Manu 2 is but little honoured in these days.

The reason why we have dilated upon the originality and authoritativeness of the Vedas and their influence on the history of Indian thought is that the origin of Grammar is organically and most intimately connected with the study of the Vedas The six Vedangas. as is well-known, mainly owe their origin to a vigorous attempt at facilitating the Vedic studies, and, among these, Grammar seems to have been the most important subsidiary. That an earnest student of the Vedas can hardly ignore the studies of these Vedangas (Grammar, Phonetics, Etymology, etc.) is made sufficiently clear by the Sruti 3 which emphatically declares

के विद्ये देदितयो इति स्व ग्रह्मविदी बदन्ति परा भौवापरा भ। ऋषेदी यज्वेद: सामवेदोऽयर्जवेद: गिचा कस्पो व्याकरण निरुक्त कन्दो जोतिपसिति। चय परा यथा सदचरमधिगम्यते॥

Manu Sachita. 2.

³ ब्राह्मणैन निष्कारको धर्मः धडडी वेटो*उसे* सो को स्था।

that the unconditional duty on the part of a Brahmin is to make a thorough study of the Vedas along with these popular 'Angas.' The injunction "साधायोऽध्येतव्यः" does not only insist upon a regular study of the Vedas, but presupposes a knowledge of grammar sufficient for the understanding of the Vedic texts. Patanjali refers to the ancient custom when Brahmin students, as a rule, used to take up grammar for their study, as an indispensable step towards the study of the Vedas. Grammar was, therefore, studied not only for its own sake in ancient India, but as a helping guide for penetrating into the structure of the Vedic texts. While enumerating the motives that are practically served by the study of grammar, Patañjali has first mentioned "Preservation of the Vedas" as the primary reason why the science of grammar should be studied with particular attention. How useful and indispensable the study of grammar is, so far as the understanding of the Vedic texts is concerned, is best shown by such descriptive epithets of grammar as "वेदानां वेदः," 2 व्यानरणं स्नृतम्, " 8 etc.

When we enquire into the origin of Sanskrit Grammar from a historical standpoint, we find

¹ पुराकत्य एतदासीत्, संस्कारोत्तरकालं त्राह्मणाः त्याकरणं साधीयते। तिथ्यसत्र स्थानकरणानुप्रदानज्ञेभ्यो वैदिकाः श्रन्दा उपदिश्यन्ते। Mahabhāṣya, Vol. I, p. 6.

² Chandogya Upanisad, 7.1.

³ Pāṇinīya Sikṣā, 42.

that there were three prominent causes in operation which brought the speculations on grammar into existence. First, certain principles of spontaneous growth, followed consciously or unconsciously in the utterance of significant sentence, provided the very basis of grammatical generalisation. In combining one word with another so as to make a significant unit of speech, people undoubtedly made use of certain laws or order regulating the mode of their verbal expression. The question of priority of language to grammar is too well known to require any explanation. The way in which men learn almost instinctively their mother tongue without having any knowledge of grammar is an evidence of how we become familiar with the vocabularies as well as with the method of constructing sentences before we actually come in touch with grammar as such, Long before any regular system of grammar was written and studied, people with whom Sanskrit was a spoken tongue could, for example, use such a verbal form as 'भवति,' without having any idea of the grammatical operations whereby the root 'a' might be changed to 'all' and 'aq' in obedience to the technical process of 'guna',1 and 's andhi.' Similarly, forms like 'गच्छित ' and 'मसोति' had obtained currency in a certain grammarless period when the grammatical conception of 'प्रकृति 'and 'प्रत्यय' were unknown, and when

the conjugational difference of the root 'गम्' from ' भ्क, ' could not be explained as peculiarities of two well-marked classes of roots, namely, 'भादि' and 'खादि.' The rule ' अन : सवर्णे दीर्घ:' presupposes a phonological principle according to which two ' अ ' or ' आ' sounds having close proximity in their utterance usually and invariably show the natural tendency of being amalgamated into one lengthened 'अ' sound. To such principles underlying the physical structure of language may be ascribed the rudiments of grammatical speculations. The fundamental basis of grammar is not purely artificial but appears to be more or less natural. A careful study of the Paribhāṣās (generalisations of grammar) and of the rules of euphonic combinations makes it abundantly clear that the principles of grammar have close affinity with popular axioms and laws of nature. The extent to which grammar is related to popular usage is best shown by Patañjali in his elaborate exposition of the rules of grammar.1 The method in which Patanjali 2 has analysed words or, more properly, a group of similar words, in order to distinguish the stems and formative elements of words, is an indication that grammar has a scientific stamp so far as its basic principles are concerned. The science of grammar does not, however, attempt

[ं] नैवेश्वर श्राज्ञापयति, नापि धर्मम् वताराः पटन्ति—श्रपवादेशत्सर्गा वाध्यन्तामिति। किं तिर्धं ? लौकिकोऽयं दृष्टानः ।—Mahābhūṣya, Vol. I, p. 115.

² सिद्धं लन्वयव्यतिरेकाम्याम् ।—Mahābhāṣya, ibid, p. 219.

to coin new words and expressions for use, but takes them in the very forms in which they are popularly used.

Secondly, the most important factor in the evolution of grammar, as a scientific and indispensable branch of study, was the necessity, more religious than academic, of devising some practical means ensuring a successful study of the Vedas; and the result was the evolution of grammar. By Sabdānusāsana or governance of words, the author of the Mahabhasya has, as Kaiyata maintains, in clear terms expressed the immediate or supreme end of grammar as such, . . and by the expression 'रचीहागमलवृसन्देहा: प्रयोजनम्' he has shown the indirect purposes that are usually served by grammar or Sabdānusāsana, as he calls it. "Preservation of the Vedic text" seems to have been the sole purpose that made the study of grammar so useful and indispensable at the same time. It is, however, difficult to say definitely when such a necessity was actually felt for the study of grammar. It is in all probability in the transitional period 2 between the poetical activity of the oldest Sambitas, and the prosaic exegesis of the Brāhmaņas with greater tendency towards classical forms, that we may try to find out the crude beginning of grammatical speculations. The trend of human thought does not always

¹ रचार्थ वेदानामध्येयं व्याकरणम्—Mahābhāṣya, p 1.

² Systems of Skt. Grammsr., Belvalkar, pp. 2-3.

flow along the same level, but it changes its course as time rolls on. The palmy days of beautiful poetry that witnessed the appearance of the Samhitas were followed by a period of intellectual decadence, if we are allowed to say To be more clear, the period of outstanding originality was followed by one of interpretation and elaboration. The ancient seers or Rsis are said to have been born with such a spiritual vision as to possess all knowledge intuitively, and it was possibly through their medium that the sacred hymns came to light. The etymological meaning of the term "ऋषि" 1 corroborates this view. Next to these Rsis came a comparatively inferior class of seers, better known as "Srutarsi" who were not gifted with intuitive knowledge from their very birth, but rose to the eminence of 'seer-ship' by receiving instructions on the Vedas from their teachers. These sages,2 out of compassion for the people of future generations, on account of their shorter span of existence and intellectual dwarfishness, are said to have composed the Vedāngas with the avowed intention of making the Vedic study less arduous. There is reason to believe that the exact meaning of the oldest hymns had already begun to be forgotten in the second stage spoken of above; and it was undoubtedly to preserve the

¹ ऋषिर्दर्शनात्-Nirukta.

² विवाग्रहणायेमं ग्रन्थं समामासिषुवेंदं च वेदाङ्गानि च-Nirukta, p. 143 (Bom. ed.)

Samhitā texts intact and to save them from misinterpretation that particular attention was directed towards grammar and the Nirukta. Yāska¹ frankly admits that the study of the Nirukta derives its importance from the fact that the meaning of the Vedic texts are not otherwise comprehensible. As a matter of fact, the Vedic hymns had ceased to be intelligible to a great extent even at so early a period, and, what is still more surprising, some teachers of respectable antiquity even pronounced in clear terms their vardiet. about the meaninglessness of the hymns. An ancient teacher like Yāska has recorded the contention of Kautsa 2 against the Vedas. The hymns, he contends, are meaningless and as such not worthy of commanding respect. When an acknowledged teacher of such remote antiquity could have assailed the trustworthiness of the Vedas on grounds, hardly justifiable, it is not at all surprising that later teachers belonging to the atheist school of Sugata and Carvaka would come forward to demolish the glorious edifice of the Vedas. In the face of such undignified attack threatening to undermine the very basis of religion, the Mīmāmsakas were confronted with a problem of great seriousness; they consequently tried

¹ प्रधापीदमनरिण मन्त्रेष्वर्षम्बयो म विदाते-Nirokts, p. 115.

[ँ] यदि मन्तार्थप्रयायानधैकं भवतीति कौकोऽनधैका हि सन्ताः—Nirukte, p. 115

their level best to set aside all antagonistic views regarding the eternality and the trustworthiness of the Vedas. Both Nairuktas and Vaiyākaranas seriously engaged themselves in the arduous task of preserving the Vedic texts intact by advocating the eternality of Sabda, on the one hand, and by analysing the entire structure of the Vedic words, on the other. The etymologists sought to bring out the meaning by suggesting derivation of words, while the grammarians took upon themselves the task of supporting the Vedic'forms by an analytical process; and these methods, supplementing each other, proved to be of much importance in preserving the sacred texts in their pristine glory. Patañjali seems to have been conscious of this paramount function of grammar, as is clear from his statement 'रचार्थं वेदानामध्येयं व्याक्तरग्रम्.' In the estimation of Patanjali grammar is pre-eminently the greatest of all Vedāngas; its greatness obviously due to the fact that grammar is indispensable to an understanding of the Vedic hymns. The epithet "Vedānām Vedam," as applied to grammar by the seers of the Upanisads, is really suggestive of the importance and dignity in which Vyākaraņa was held in those days.

In the third place, the growing popularity of different forms of Prākṛta served almost like an incentive to the rise of so many systems of grammar in Sanskrit. Sanskrit, even when it was a spoken tongue, had been confined to the area of the cultured community. The Siṣṭas or the

Sanskrit-speaking people had, however, to come frequently in touch with the untutored masses, and this was calculated to destroy the purity of the "Divine tongue" to a certain extent. As a result of this intercourse, many Prakṛta forms crept into Sanskrit and became almost naturalised in course of time. That Sanskrit had suffered mutilation and distortion of forms at the hands of those who failed to pronounce the correct Sanskrit words, either on account of wrong imitation or their natural inaptitude, is testined by the so-called Apabhraméas which represent Sanskrit only in a distorted form. The space at our disposal will not, however, permit .us to discuss the much vexed question as to whether Prakrta-Apabhramsas are directly descended from Sanskrit under circumstances stated above, or originated from an altogether different source. We only repeat what we have pointed out elsewhere that the Hindu grammarians, because of their unbounded regard for Sanskrit as the most original of all tongues, or for the striking similarity of the so-called तद्वव forms of Prākṛta with Sanskrit, held Prākṛta to be an off-shoot of Sanskrit. To look upon both Sanskrit and Prakrta as two sister tongues, descended from a common source, is a view that is little favoured by the Hindu grammarians. As the number of Sanskritspeaking people gradually diminished, and Prakria dialects, on the other hand, began to

obtain greater popularity till they spread all over the country, the orthodox Hindu teachers were almost compelled to notice the linguistic peculiarities of Sanskrit and draw hard and fast rules regulating them, their sole motive being the preservation of their tradi-'tionally sacred tongue from corruption. The expression शब्दानुशासन, as significantly used by Patañjali instead of the more popular term व्यान्नर्ण, serves to indicate that the main function of grammar is as much to support the correct forms in conformity with the fixed rules, as to show indirectly how words of pure Sanskrit origin differ from Apabhramsas which represent the linguistic corruption caused by wrong imitation and inability to pronounce the correct Sanskrit words. In the Mahābhāṣya we find it explicitly stated that 'governance of the correct words' forms the main function of grammar, and by the discrimination of correct forms as gauh, the corrupt ones as $g\bar{a}v\bar{\imath}$, $gon\bar{\imath}$, $got\bar{a}$, etc., are indirectly pointed out.2 Sanskrit grammar thus draws a line of demarcation the correct and corrupt forms, the former being conformable to the rules laid down in grammar, and the latter lying entirely outside the scope of Sanskrit grammar. The spread of Buddhism, as it was accompanied by the popularity of Prākṛta, is supposed to have given a

¹ साध्वतुशासनेऽस्मिन् शास्त्रे, etc., Mahābhāṣya, Vol. I, p. 104.

² गौरित्येतिसानुपदिष्टे गस्यत एतङ्गाव्यादयोऽपशब्दा इति ।—Vol. I, p. 5.

stronger impetus to an intensive study of Sanskrit grammar. It must be, however, remembered that the Hindu grammarians, in spite of all their attempts, as is evinced in their formulation of rules, could not entirely evade the possibility of their sacred tongue being mixed up, though to a small extent, with the corrupt Apabhramsas. Kumarila speaks of the naturalisation of certain Dravidian forms into Sanskrit.

Thus, there grew up different systems, of grammar in Sanskrit: commentators after commentators came to elaborate and supplement them in the light of new facts. At this stage of our knowledge, we cannot exactly determine the number of grammatical systems that once existed in ancient India. We generally hear of eight prominent systems each founded by a renowned Sābdika or grammarian.1 Astādhvāví mentions the names of many grammarians whose works have, unfortunately, not come down to us. In the Mahabhasya mention is made of two eminent grammarians, namely, Vyādi and Vājapyāyana, the former is supposed to have written a huge treatise on grammar called Samgraha, which is so authoritatively spoken of by Patanjali.2 Yaska has

^{ः &#}x27;'ऐन्द्र चान्द्र' काश्रकत्स्यं कीसार शाकटावनम्। कारस्तरं चापिशलं शाकलं पाणिनायकम्।''

² कंपह एतत् प्राधादीन परीचितं निल्लो कास्यात कार्यो वैति।—Vol I, p 6

recorded a controversy between two gramma-rians—Sākatāyana and Gārgya—each of whom had undoubtedly a system of grammar to his credit. The old treatises on grammar are almost irrecoverably lost; but those that remain are sufficient to constitute a vast literature of which there is no parallel in any language of the world. In no other land except India was the science of grammar studied with so much zeal and deliberation.

This is, in short, the history of the evolution of Sanskrit grammar. It is, however, difficult to ascertain the period to which the real foundation of the science of grammar might be traced. The analytical method upon which is based the fundamental principle of Vyākaraņa is first seen, though in a crude form, in the Pada-Pāṭha arrangement of the Samhitā texts, which is popularly attributed to the authorship of Sākalya. It is in this method of decomposition that we meet with the beginning of disjoining Sandhi and Samāsa, and the addition of Upasarga with the verbal forms. While the Pada-Pāṭha order thus represents the first step towards grammar, the elaborate logical speculations of the Prātiśākhyas may be said to have shown grammar in the making. Some problems of real grammatical interest are also to be found in the Prātiśākhyas. The oldest specimens, however, of the Prātiśākhyas, which are so akin to grammar, are not accessible, and most of the extant treatises are of comparatively

modern origin, some of them being even posterior to Panini There is ample evidence to indicate that different schools of grammar had already been in existence when Yaska wrote his famous commentary on the Nighantu. That Yaska was preceded by a good many grammarians is clear from his statement वैयाकरणानां चेके 1 and the grammatical controversy he has referred to Yāska made ample use of these earlier systems of grammar current in his time. The definition Sandhi, पर: मजिक्दं: मंहिता, quoted by Yāska, and incorporated into his Aştādhyāyī by Pāņini, is supposed to have been taken from some older systems of grammar. Morcover. Yāska's fourfold classification of Padas as noun, verb, preposition and particle, also seems to be a reproduction from a certain grammar which has not left any trace behind. The use of such technical terms as affect, etc., does not really indicate originality on the part of Yaska, but what is plausible is that they were undoubtedly borrowed from some earlier systems of grammar no longer extant. The loss sustained by grammatical literature is enormous; we find numerous references to several grammarians both in Yaska's Nirukta and Panini's Astādhyāvī, but it is regrettable that very little of their works has come down to us. Just as

[े] म सर्वोगीत गार्थी वैद्याकरणाना चैके-Nirokta. p 99

¹ Pan . T w 109

among the huge Nirukta literature, the work of Yāska only is available in a complete form, even so it is the Aṣṭādhyāyī of Pāṇini alone that has fortunately survived the numerous systems of grammar, such as those of Sākalya, Sākaṭāyana, Gārgya, Gālava, Senaka, Sphoṭāyana, Bhāradvāja, Āpiśali, Kāśakṛtsna, Vyāḍi, and Vājapyāyana.

The identity of the first grammarian is also a difficult point of enquiry in the history of grammatical speculations. Having discussed circumstances that paved the path for evolution of such a scientific branch of study as grammar, we now turn our attention, though without any avail, to the question of determining the first author of a system of grammar. peculiarities of language, specially when older forms became obsolete and were sequently replaced by new words of spontaneous growth, provided the basis upon which was built the scientific structure of grammar. There are certain fixed laws underlying the use of words; they are more or less natural and simple. the real difficulty comes when we proceed to determine that clever being who first assimilated such principles and developed them into a system of grammar. The Taittirīya Samhitā 1 contains a narration according to which Indra may be styled the first grammarian.

¹ वाग्वे पराच्यवाक्ततावदत्ते देवा इन्द्रमत्तुवित्तमां नी वाचं व्याक्तिविति व्याक्तित्ति वामिन्द्री मध्यतीऽवक्राय व्याकरीत्तक्मादिशं व्याक्तता वागुद्यते।—Tait. Sam., VI. 4. 7.

agé.when speech was undivided into its component elements, it was Indra who is said to have divided speech, and thenceforward it is known as व्यक्तिता वाक or analysed speech. This though apparently incredulous, is strengthened by the evidence of the Mahabhāṣya 1 where a tradition is recorded to the effect that Indra made a thorough study of words under the tutorship of Brhaspati-the divine teacher. Further, the name of Indra may be traced in the list of eight Sabdikas or grammarians. But we do not know whether it would be a truism or a positive mistake to ascribe the authorship of the so-called Aindra grammar to Indra as a divine personage. There is, however, no wonder that the conception of a grammar had first originated with a respectable divine being, because Panini is also said to have received the first 14 Sntras from the lord Siva and these rules are consequently known as "Makeśvara Satra," Nandikeśvara 2 in his Kāśikā has shown how on the pretext of beating drum the lord Siva revealed the fundamental principles of grammar. Similarly, Sarvavarman, the author of the Kātantra Sūtras. is said to have received the nucleus of his grammar from Karttikeya and hence the system

¹ ''एवं हि यूपते—अइम्पतिरिद्धाय दिखं वर्धसहस्र' प्रतिपदीकानां शब्दाना शब्दपारायकं प्रीवास नानं नगाम" (—Mabābhāṣṇa, Vol. I, p 5

श्वावसाने नटराजराजो ननाट ढका नवपश्वारम् ॥
 जदर्सुकामः सनकादिसिङ्गानेतादमभ ॥

18

is popularly known as "Kumāru Vyākaraņa." 1 Whatever value we may attach to these narratives and traditions, there is every reason to suppose that long before the grammarians of the Alexandrine period, the Hindu teachers had developed different schools of grammar and succeeded in giving them a highly scientific character.

Before concluding this topic we need only make a passing reference to what has been said by Bhartrhari in regard to the origin and importance of grammar. Following in the wake of Patanjali, the author of the Vakyapadīya 2 describes grammar as the foremost of all Vedāngas and as a direct auxiliary to the Vedic studies, supporting as it does the correctness of the Vedic forms. He is loud in eulogising the importance of grammar, for he boldly asserts that it is impossible to comprehend the meaning of words without an adequate knowledge of grammar. He maintains grammar to be the most sacred of all branches of learning and calls it 'Adhividya' and sometimes " $Ajihbhar{a}$ rājapaddhati." As an exponent of the doctrine of 'Sphota,' Bhartrhari looks upon grammar from a different standpoint, raising grammar to the dignity of Agama and Smrti, for he is

Vākyapadīya, I, Kār. 11.

¹ शहरस्य सुखादानीं सुला चैव पड़ानन:। लिखीख शिखिन: पुच्छे कलाप इति कथाते॥

[ै] त्रासनं नन्नाणसम् तपसासुत्तमं तपः। प्रथमं कृत्दसामङ्गं प्राष्ट्रव्यीकरणं बुधाः॥

even prepared to maintain that the study of grammar ultimately leads to salvation.

Vyakarana-Smrti, he holds, is a set of rules that helps the comprehension of correct words, it seems to be almost without beginning. (नित्य), because such a process as followed by grammar appears to have been current from time immemorial.

In my "Linguistic Speculations of the Hindus" I tried to show on the basis of some pissages from the Rg Veda and Brahmanas that speculations on language and grammar had their origin in India in a very remote age. The Samhitā literature represents, of course, the crude beginning of grammatical speculations, and there is consequently absence of systematisation and elaboration. It is interesting to see that the scientific accuracy of these speculations is almost unquestionable. The earliest reference to grammatical speculations, we may venture to add on the authority of Patañjali and Sayana, is to be found in the Rk watte 751,8 etc., which

admits of double interpretations-sacrificial and grammatical. The bull spoken of here represents the science of grammar and is said to be a divine being characterised by sound. Its four horns stand for four component parts of speech नासाख्यातोपसर्ग-निपाता:; three feet for three tenses (present, past and future); and two heads and seven hands symbolise respectively two kinds of Padas (सुबन्त and तिङन्त) or नित्य and कार्यभन्द and seven caseendings. Another Rk,1 as we have already pointed out, speaks of four different forms of speech (Parā, Pasyantī, Madhyamā and Vaikharī) and lays down that it is the fourth form of speech that is current among men. The ancient term denoting a grammarian seems to have been "वागयोगवित" meaning 'one who knows the connection of words, viz., combination of stems and suffixes;' and it is emphatically stated in a Rk that $V\bar{a}k^2$ or speech reveals herself entirely to such 'analysers of speech.' While commenting on the Rk सुदेवोऽसि वक्ष, 3 etc., Patañjali explains the expression सप्तसिस्वव: as an allusion to grammatical case-endings which are seven in number. There are many passages the Samhitas which have thus either direct or indirect bearing upon grammar—a fact which

Bhartrhari also speaks of Śabda or, more properly, Śabda-Brahman, as a Bull representing the Supreme Deity—"प्राहुमहान्तस्यमं येन सायुच्यमिष्यते"—Vākyapadīya, I. 132.

चतारि वाक्परिमिता पदानि तानि विदुन्नी सणा ये मनीषिण:।

³ Rg Veda, VIII. 69. 12.

proves beyond doubt that Indian speculations on grammar are decidedly the oldest of their kinds. In the Tait. Samhita, as we have already shown, Fak is said to have been originally undivided into parts, and that it was Indra who analysed speech in response to an appeal made by gods.

Then, we turn to the Brahmana literature. Here we find the real beginning of grammar. · The etymological explanations of words, such as, यहरीदोत् तद्वद्रस्य सद्दलम् and so on, showing us at once the derivative meanings as well as the method of analysing words into their parts, bring us face to face with grammar in its growth. The Nairuktas or etymologists adopted this method of explaining words and have quoted largely from the Brahmanas. The term Pyakarana, meaning as it does the 'science which dissolves words into elements' (stems and suffixes) and thereby brings out their exact meanings. is in itself an indication that grammar and etymology are intimately connected with each other. It is obviously for their mutual dependence that Yaska has expressly stated that the science of etymology (Nirukta), though it has its independent character as well, may be viewed as a complement to grammar. The difference between the Sainhitäs and the Brahmanas is not, far from speaking of their subject-matter, one of melodious poetry and monotonous prose, but a careful study will reveal that there is distinct

difference of language too. In the transitional period of this literary activity we find, as we have already shown, that the older Vedic forms have almost disappeared and new words and expressions with greater tendency towards classical forms were coming into existence. That the Brāhmaṇa literature made some progress in grammatical speculations is quite evident from the fact that there occur here and there such grammatical terms as Vacana (number), bhakti (case-endings), Dhātu (root) and so on. Of the Brāhmaṇas the Gopatha deserves special mention, since it contains in a passage 1 almost all the popular technical terms of Sanskrit grammar. In its enumeration of different branches of learning the Chandogya Upanimention of such a branch of sad makes वेदानां वेद:, which is explained by Sankara as referring to the science of grammar. The epithet "the Veda of the Vedas," as applied to grammar, serves to indicate the indispensable character of grammar for an understanding of the Vedic texts. That is why grammar is compared to the face of the Vedas. Patañjali also observes that grammar is preeminently the greatest of all Vedāngas.

Even in so remote a period as that of the Brāhmaṇas, necessity was already felt to devise

¹ श्रोंकारं पृच्छाम:। की घातु:? क: प्रत्यय:? क: खर:? किं प्रातिपदिक्तम्? कि नाम? किं साख्यातम्? किं लिङ्गम्? किं वचनम्? का विभक्ति:?

practical means for the preservation of the older texts and the natural outcome was the evolution of the Vedangas. Of these Vedangas. Siksa and Nirukta are more or less related to grammar. The Siksūs or treatises phonetics deal with letters (vowels and consonants), accents (Udatta, Anudatta and Svarita), different organs of pronunciation. Sandhi or euphonic combination and so on. We do not, however, fail to see that the "Siksas," though their main importance lies in the correct recitation of the Vedic hymns, deal with the phonological side of grammar. That grammar has connection with accents is clearly shown by the fact that the so-called Samasas, so far as the Samhitas are concerned, had to be determined by different modulations of accents. Here again we first meet with "Sandhi," i.e. the combination of letters with one another in accordance with certain euphonic principles. The arrangement of words, as shown in the "Padapātha", serves to evince an attempt not only at disjoining the so-called "Sandhis" but clearly indicates how the grammatical method of analysis had already been in operation. treatises on phonetics are almost irrecoverably lost. The Pada-pātha texts which are popularly attributed to Sakalva only seem to have been well preserved.

Early Sanskrit literature had to suffer enormous loss; and nowhere such loss is more remarkable as in the case of the Pratisakhyas and the

Niruktas. We have got no oldest specimen of these classes of literature indicating the historical and continuous development of so ancient but extensive a literature; and what have practically survived seem to have a comparatively modern origin. The Prātiśākhyas, even in their present forms, are sufficient evidence that the study of grammar as a science had already been taken up with all earnestness. "If the nature and contents of our existing Prātiśākhya literature," says Dr. Belvalkar, "can safely be made the basis of any inference, we may suppose that these earlier treatises (1) classified the Vedic texts into the four forms of speech known to Yāska; (2) framed and carefully defined some of the primitive Samjñās or technical terms; and (3) possibly also made some more or less crude attempts to reduce the words to their elements and explain the mode of their grammatical formation."

We have already referred to the fact that Yāska, who flourished at a date not later than 700 B. C., had a good many predecessors—both etymologists and grammarians; and his work is not the first of its kind. The list of etymologists and grammarians, as mentioned by Yāska, gives unmistakable proof that Yāska had already found in existence different schools of the Nirukta and grammar. We are naturally inclined to think that the speculations on grammar which had had their crude beginning in the Brāhmaṇa literature had gradually obtained

wider scope and scientific character and finally developed into regular systems long before Yaska. That plagiarism as a literary theft was unknown in ancient India is borne testimony to by the fact that a teacher, whenever he happened to cite anything in support of his particular view, either from his predecessors or contemporary authors, was not at all slow to acknowledge his indebtedness to them by mentioning their names. This practice has been of considerable help, to us, as it enables us to trace the names of those teachers whose names, like their works, would have been otherwise undiscoverable. In the Pratisakhvas mention is made of a good many teachers some of whom were undoubtedly grammarians. In the Taittiriya, for instance, are mentioned some twenty teachers, but we fail to trace there the name of any reputed grammarian. Among the host of teachers mentioned by Yaska, there are four, namely, Sakatayana, Gargya, Galava, and Sakalya who are credited with having founded their respective schools of grammar and their works seem to have been existing even in the days of Pāṇini. Yāska has recorded a controversy which had ensued between Sakaţāyana on the one hand and Gärgya and the grammarians on the other, with regard to the reducibility of words to roots. Sākatāyana seems to have been one of the oldest grammarians, and some of his views (as his work is no longer available) might

Mention is made of Sākaṭāyana in the Atharva-Prātiśākhya in connection with combination, division, and disjunction of words. Yāska has thrice referred to Sākaṭāyana and has probably given his doctrines verbatim thus:—(1) 'All words are derivable from roots'; (2) 'Prepositions have no significance by themselves apart from nouns and verbs to which they are prefixed'; (3) his fanciful derivation of the word "Satya" from two different roots (as, in).

Though our knowledge of ancient grammarians is nothing but scanty and meagre, it is admitted without contention that speculations on grammar had already taken a definite form long before the Christian era. The few observations. as mentioned above, will serve to show the extent of scientifi caccuracy exhibited by the Indian grammarians. Yāska had undoubtedly many treatises on grammar and etymology before him and he made ample use of them. The theory enunciated by Sākaṭāyana as to the reducibility of all words to roots was accepted by Yāska with all earnestness; he followed it as a basic principle in all his etymological explanations. He classified speech into four forms, namely, noun, verb, preposition, and indeclinable, giving their exact significance. This four-fold classification of words seems to have been taken by Yāska from some earlier works on grammar. He not only distinguishes nouns from verbs with grammatical terminations (sup, tin) but

seems to have known even the formation of verbal nouns (kṛdanta). In his discourse as to the priority of combination (Saṃhitā), he has given a definition of Sandhi 'पर: ধৰিকৰ্দ: ধাৰিকা' which was probably incorporated into his Aṣṭādhyāyī by Pāṇini in a later period. The two well-marked forms of the language, namely, Chandas and Bhāṣā (current speech) were known to him, as he has sometimes derived Vedic words from 'laukika' (spoken tongue) roots and vice versa. He has also taken notice of dialectical varieties of Sanskrit as they existed in different parts of India, where Sanskrit had been then a spoken language.

Among the ancient grammarians, Vyādi and Vājapyāyana appear to be somewhat prominent, specially as the exponents of two popular doctrines of grammar.

Vyādi and Vājapyāyana are said to have been reputed grammarians. The former is well-known as the author of a huge work on grammar called 'Samgraha.' Pataājali has referred to this work, as an authoritative one, while discussing the eternality of Sabda. Mention is again made of Vyādi in the Vārttika as one holding 'substance' (इन्च) as the meaning of all words. This is, in short, what we know about Vyādi. The name of Vājapyāyana also occurs in the Vārttika. In conjunction with the Mīmāṃsaka point of view, Vājapyāyana holds that all words are expressive of 'class' (पाकति).

28 PHILOSOPHY OF SANSKRIT GRAMMAR

Next we pass on to Pāṇini, the popular author of the Aştādhyāyī. As the founder of a scientific system of grammar which has survived the destroying hands of time, Pāṇini is regarded as the highest authority on grammar. Pāṇini is mentioned as one of the reputed eight grammarians. His work is often alluded to as a great system पाणिनीयं सहाशासं पदसाधुत्वसत्त्रणम् 1 and sometimes as "Vyākarana-Smrti." 2 He was not a pioneer in his attempt, but had the advantage of consulting many earlier treatises on grammar before he could develop such a system which bears the stamp of scientific perfection in so remarkable a way. With him closes a period of Sanskrit literature which represents the beginning of the classical period. His aphorisms have a history behind them and presuppose a literature. Prof. Goldstücker 'Pāṇini: His Place in Sanskrit Literature' has dealt with the question of pre-Paninian literature and has discussed at length Pāṇini's scope of knowledge; but my views differ from those of the learned professor in some points. The object kept in view in writing these pages is to show in broad outlines the philosophy of Sanskrit grammar and not to attempt historical study of grammatical literature. Prof. Belvalkar's learned work 'Systems of

¹ Parādara-Upapurāņa.

[ं] भापन्त्रानविषया मैपा व्याकरणसृतिः। Vakyapadiya and तन्तर्कस्तद दितीयार्यंडत्येव पाणिनैः सृतिः।

Grammar,' however, gives a historical survey of different systems of Sanskrit grammar, and is a valuable contribution to our knowledge.

Though Panini had many predecessors in the same line, it is his "Aştādhyāyī" alone that has survived as a great landmark in the domain of Sanskrit literature. To a student of ancient Indian history, Pāṇini's "Aṣṭādhyāyī" has got its historical importance too. Thus, judged from both grammatical and historical standpoints, Pāṇini's work is a very valuable record of Indian culture. Many other works on grammar following in the wake of pre-Paninian and Paninian schools came into existence and gave rise to a vast literature which is almost without a parallel. The system of grammar founded by Pānini was studied with uncommon zeal, as a Vedānga, by so reputed scholars as Kātyāyana and Patanjali. Attempts were also made from time to time to elaborate and supplement it in such a way as to make it a complete whole, Kātyāyana to whom is attributed the authorship of the 'Varttikas' tried his best to supplement the work of Panini, having paid keen attention to the new stock of forms that gradually obtained currency in the course of linguistic development. Then came Patañjali with his wonderful genius and unparalleled erudition and wrote his famous commentary the 'Mahābhāsya,' which is still regarded as the highest authority on all problems of grammar. He may be said to have changed the angle of vision. He proceeded on a new line with the consequence that grammar received a far more scientific treatment in his hands and ultimately came to be regarded as a particular system of philosophy. He approached grammar from a logical standpoint always trying to find out the principles underlying the aphorisms of Pāṇini and Kātyāyana. There is indication in the first 'Āhnika' of the Mahābhāṣya that grammar was not only a heterogeneous combination of Sūtraś with Patañjali, but it was treated by him as a regular science.

Though virtually a commentary, the Mahābhāṣya has its originality both in method and exposition; it brings the system of Pānini to perfection and provides a vast field of study. Pāṇini, Kātyāyana and Patañjali are popularly known as the "Triad of grammarians" and the as "Trimuni Vyākaraņa" (त्रिमुनि व्याकरणस्). Next came Bhartrhari, the author of the "Vakyapadiya," who seems to have made a masterly study of the "Mahābhāṣya" which fitted him to write his famous work dealing mainly with the philosophical aspects of gram-It was, therefore, finally in the hands of Bhartrhari that the philosophical character of grammar became more and more conspicuous and grammar was ultimately established as a distinct system of philosophy.

To give a consistent history of grammatical speculations and the huge literature that evolved

out of them lies almost beyond the compass of this work. What we have tried to show in the foregoing pages is to point out that the speculations on grammar which had had their crude beginning in the Brāhmaṇas and subsequent literature had to pass through different stages of perfection before they could develop into regular systems in the hands of Sākatāyana, Sākalya, and others.

The indispensable character of grammar for understanding the Vedic texts was a matter of so great concern that grammar came to be regarded as the greatest of all Vedāngas. The importance of grammar lies in the fact that without a thorough knowledge of grammar one cannot distinguish correct words from incorrect ones (as there is no difference of meanings) and consequently fails to attain that religious felicity which is only attainable by the use of correct words. The study of grammar enables one, on the other hand, to discriminate the correct words as opposed to the so-called "Apabhramsa." Bhartrhari calls grammar " Smrti " 1 which has for its subject the knowledge of correct words. One may argue that the knowledge of correct words may be obtained from popular or current usage and consequently grammar does not serve any useful purpose. Bhartrhari 2 meets this

¹ साप्तकानविषया सेषा व्याकरचकृतिः। धविक्वेदेन शिष्टानासिदं सृति-निक्तनस् ।—Vākyapadiya, I, 143.

^{*} तत्त्वाववीधः मन्दानां नासि व्याकरणाहते ।—11. 1. 13.

argument by holding that grammar derives its importance from the fact that it lays down principles covering almost the entire field of correct words and has thus become a practical standard for distinguishing the correct words current among the "Sistas" from corrupt forms. For the recognition of current words, we should take recourse to certain principles to avoid unwarranted uses; grammar is identified with such principles made on the authority of the Vedas, conforming to the current uses and handed down to us through generations of teachers. "Vyākaraņa-Smṛti", as Bhartrhari often applies this epithet to grammar, is current from time immemorial and does not appear to have suffered any breach of continuity in the course of its development. The author of the Vākyapadīya is not content with this statement only but goes further and maintains that the study of grammar leads ultimately to salvation. How final emancipation is obtained from a study of correct words will be understood only if we, like the ancient seers, try to find out the mystical aspect of sound and look upon words as an emblem or symbol of All-pervading God. origin of the doctrine of 'world-producing Logos' or भन्दब्रह्मवाद: may be traced to an attempt to discover the divine element in words. Puņyarāja quotes a verse 2 which states that

तदुदारमप्वर्गेष्य वाङ्मलानां चिकित्सितम् । पवित्रं सर्वेविद्यानामधिविद्यं प्रकाशते ।—Vākya., I. 14.

⁵ Vākyapadīya, I, p. 8.

water is the most sacred thing in the earth; the Vedic mantras are more sacred than water, but grammar is even superior in sanctity to the Vedas. The references given above are intended to show the respect that was accorded to grammar in those days.

CHAPTER II

ANUBANDHA AND CATEGORY

Grammar—Name and definitions—The Philosophy of Sanskrit Grammar—Anubandhas—Categories of Grammar.

The earliest name whereby the science of grammar was designated is possibly वेदानां वेद: 'the Veda of the Vedas,' as is to be found in the long list of Sastras enumerated in the Upanişads. The popular term 'Vyākaraņa' appears to be an old one; it points at once to the analytical process (ন্বার) by which words are dissolved into bases and suffixes. expression like আলুনা বাৰ meaning 'divided speech' is also to be met with in the Vedic literature. Both the terms व्याकरण and वैयाकरण occur in the Nirukta. Grammar is also called शब्दशास, and the grammarians are popularly known as शाब्दिक and sometimes as 'वाग्योगवित्,' i.e., one who knows the combination of speech. Patanjali has used the expression 'शब्दान्यासन' instead of व्याकरण at the very beginning of his work, his object obviously being to point out that the first and foremost function of grammar is to show how by their conformity to the rules of grammar correct words are distinguished from incorrect ones. He derives the term व्याकरण as 'व्याक्रियन्ते व्युत्पाद्यन्ते शब्दा अनेनिति-व्याकरणम्' and speaks of both words and rules as what constitute grammar that supports the correctness of Sanskrit words (लध्यलचार्ण व्याकरणम्). He holds further that the knowledge of words does not really follow from the rules alone, but from a clear interpretation of those rules showing both examples and counter-examples. Of the six Augas, Patañjali maintains, grammar is decidedly the greatest, as it directly helps the study of the Vedas. Durga holds that grammar consists of rules and primarily deals with the physical structure of words, whereas the science of etymology lays greater stress on the psychological aspect, viz., significance. Grammar seems to have attained to scriptural authority, for Bhartrhari and others are often found to ascribe such epithets to grammar, as व्याकरणस्मृति and व्याकरणागम. There is a special section on grammar in the Purva-Mimamsu system where grammar has been referred to as a branch of Smrti having bearing upon Dharma. The way in which grammar comes in close touch with Dharma may be shewn by, the fact that grammar, as a science, deals with the correct forms of words, the proper knowledge is necessary for the attainment of which of religious merits. Though the correct Sanskrit forms, says Patanjali, as well as the corrupt words are equally expressive of sense, it is only the use of correct ones that is attended with religious felicity. Moreover, grammar is the only instrument whereby correct words are distinguished from corrupt forms, and the meanings of words are ascertained. The importance and usefulness of grammar for a thorough knowledge of the Vedic texts cannot, therefore, be over-estimated.

It will be a mistake to suppose that Sanskrit grammar, as defined above, is nothing but a number of rules that attempt to explain the formation and analysis of words in a manner that has nothing to do with principles as such. Words are so numerous and so diversified in forms, that the grammarians had had to face a great difficulty in making a thorough study of words. Scholars of the reputation of Patanjali and Durga failed to take notice of the entire field of words 1 which, as we find, is always being enlarged with the advancement of knowledge. But credit to the vigorous attempts of the Indian grammarians who succeeded conspicuously in their study of words and placed the grammatical speculations on a purely scientific basis.

It is really striking to see how the grammarians could systematise their studies of words in spite of such varieties of forms. Great as the task was, the grammarians proved equal, as they adopted the scientific method and framed the rules on the principle of generalisation and particularisation, taking notice of all possible forms. Still greater was the difficulty in determining the radical and

[े] श्रष्टं च भाष्यकार्य कुणायैकिषयावुभी । नैव ग्रन्दाम्बुधः पारं किमन्ये लङ्बुद्धयः

inflexional elements in words. Analysers of speech as they were, the grammarians had to reach the last stage of linguistic analysis, and this, as we know, was practicable by the application of the principle of अन्वयव्यतिरेक or the method of agreement and difference. The conclusion to which we are naturally led is that Sanskrit grammar was not busy with isolated words but was based on principles. An attempt may be made here to show that the study of grammar is not a mechanical way of mastering 'the conjugation and declension of certain forms and that grammar does not give a cumbrous process of fanciful derivations. Grammar, like all philosophical systems, has its own categories and logic and is ultimately based on the principles that are strictly philosophical. The study of grammar on a philosophical line received its inception at the hands of Patanjali who, in his elaborate commentary known as the Mahābhāṣya, has dealt with the grammatical problems from a different standpoint and has practically given them a philosophical character. The work of Pānini has been treated by Mādhavācaryya as a system of philosophy.1 Grammar was no longer looked upon as an artifice but as embodying the principles of spontaneous growth. Bhartrhari seems to have made a careful study of the Mahābhāṣya; this had not only widened his scope of knowledge but befitted him to

explain the principles of grammar from a purely philosophical stand-point. With him grammar was a regular system of philosophy and he treated it as such. What Patañjali and Bhartrhari have done for grammar is really wonderful: they would always deserve our admiration the founder of an interesting branch of study as the 'Philosophy of grammar.' Their conspicuous contribution towards the building up of this new school of thought is none the less important and valuable than what Plato and Aristotle have actually done for philosophy proper. Thanks to the labours of these grammarians, we can boast of this peculiar system of philosophy to the rest of the world.

Having taken a brief survey about the origin of grammatical speculations and the subsequent periods in which those speculations had been systematised by the ancient grammarians in a scientific way, we now proceed to shew, following the line of thought of Patañjali and Bhartrhari, that Sanskrit grammar may be studied as a regular system philosophy. There was a time when the authoritativeness of grammar reached such a height as to deserve such epithets as आगम and स्रुति, and the author of the 'Sarvadarsanasamgraha found in the Pāṇiniyan system grammar certain characteristics which induced him to treat it, as if it were a regular system of philosophy. Now, as a system of philosophy,

grammai must have its Anubandhas, entegories and principles Grammar, to begin with, is mainly connected with Sabdas and their corresponding significance, and is, therefore, popularly called Sabda-Sastra The relation, ag iin, in which words stand to the world of objects is one of Pacya-Pacaha (connoter and connoted), and there are is many words as there are objects to be named Thus, we see that the scope of negrita covers almost the entire sphere of thought It' is said that the entire world of objects resides in words in a subtle form and the so-called Pacya and Vācaka are not really different but essentially one and the same thing Further, no cognition whatsoever is ever possible without the use of words, and the knowledge of all descriptions seems to be bound up with words

Every system of Hindu philosophy has its own Anubandhas Grammur, when viewed as a system of thought, may be shown to have its particular Anubandhas (1) Grammar has Sabda as its subject, (2) the relation of grammur with Sabda is that the former analyses Sabda into stems and suffixes (NUTA and NUTA), and thus helps the understanding of the significance

¹ मन्देवेवाधिता सक्षिपेयसास्य निवस्तनी।—Vakyapad ya 1 119 and स्वतिद्वानिव ज्ञान सर्वेगस्ट्रेन सासत।— 1 124

While explaining the expression वेदानां वेद:, as an epithet of grammar, Sankara states that grammar by division of words enables us to comprethe meanings thereof. As regards the Prayojana or object, it is definitely stated by the expression शब्दानुशासन, that is, the first and foremost object of grammar is to formulate such principles as would 'serve to distinguish correct forms from incorrect (স্বথন্ন্য) Kaiyata rightly observes that by the expression शब्दानुशासन, the author of the Mahābhāsya sets forth the immediate object of grammar and the statement रच्चोहागसलवृसंदेहा: प्रयोजनस् enumerates only the indirect purposes that are served by the study of grammar. So far as Adhikārī is concerned, it is sufficient to say that one desirous of having the knowledge of correct words is alone competent to take up the study of grammar. It is known to all students of Hindu philosophy that the Indian teachers have, as a rule, discussed the question Anubandhas in the very beginning of their discourses, with the obvious object of inducing people to those studies. There are reasons to believe that this was followed as a traditional practice, because Yāska too in his Nirukta did not fail to treat of such Anubandhas.

Having dealt with the Anubandhas of grammar, Patanjali has drawn our attention to the fact that the statement of objects (Prayojana) is of no use, as both the Vedas and grammar are required to be studied without having any

definite object in view. The question to of Prayojana may arise with regard to other branches of studies apart from the Vedas, because it is definitely enjoined that the unconditional duty on the part of a Brahmin is to make a study of the Vedas with the six popular Augas (grammar, etymology, etc.) and acquire a thorough knowledge of them. He gives us a glimpse of the timehonoured custom regarding the ancient method of teaching in India. The Brahmins are said to have devoted themselves in ancient times to the study of grammar just after their Upanayana ceremony was over; and they were allowed to study the Vedas only on their attaining a sufficient knowledge of grammar. But time has much changed. People now take up the study of the Vedas first, as their shorter span of existence does not allow them to master grammar before attempting such a vast field of study. Further, they cannot practically afford to devote the greater portion of their life exclusively to the acquisition of proficiency in grammar, since they like to turn out teachers, capable of speaking Sanskrit, in course of a short duration. This is why they take to the study of the Vedas just in the beginning of their

वैदातिरिक्तविपये एव प्रयोजनात्वाच्यानं न स वैद्रविषये ।

[—]Bbāsya Pradīpodyota.

* पुराकस्य ण्वराशित् मंस्रारोधरकालं ब्राझ्यणाः व्याक्षर्यं प्रापीयते । तेप्यत्मत्तृष्यानकरवातृत्रानदानश्चेश्यो बैदिकाः ग्रब्स प्रपिद्यन्ते, तद्दालं न स्रष्टा, पेदमधीन सरिता बक्षारी भवीत् ।—Mshibbāsya, Vol. I. p. 5.

academic career. Grammar is called Uttarā $Vidy\bar{a}$ which is capable of being understood to a considerable extent by intelligent students, engaged in the serious study of the Vedas. What Patanjali has observed here is applicable to much recent times. The presentday scholars are more or less actuated by the desire of securing recognition as Pundits in as short a time as possible. With this object in view, they engage themselves to the study of many Sastras, though superficially, before they have obtained sufficient proficiency in grammar to qualify them to take up other branches of study. The statement of Prayojana has indeed some other reasons. Patañjali has anticipated an objection that might be raised against the so-called necessity of making a study of grammar. We know that words—both Vedic and Laukika -form the subject of grammar. The study of grammar as a science, some may argue, is of no importance, because the Vedic words might be learnt from the Vedas and the correctness of Laukika or current words from popular usages. 1 The study of grammar, if pursued for the knowledge of words, is, therefore, nothing but useless. Now it is simply to do away with such unreasonable arguments that Pāṇini wrote his famous Aṣṭādhyāyī clearly showing the

वदान्नी वैदिका: शब्दा: सिद्धा लोकाच लीकिका:। तसादनर्थकं व्याकरणिमति। तिथा एवं विप्रतिपन्नवुडिभ्योऽध्येत्रभ्यः सुहृद् सूला चाचार्यं इदं शास्त्रमन्वाचष्टे—इसानि प्रयोजनान्यध्येयं व्याकरणम् ।---Mahābhāsya, Vol. I, p. 5.

objects for which grammar should be studied. The enunciation of *Prayogana*—both direct and indirect—is, therefore, necessary to show that the study of grammar is indispensable for the knowledge of the Vedic texts and the accurate discrimination of correct Sanskrit words.

The eternality of Sabda, as supported by the grammarians, furnishes another objection as to the usefulness of grammar. As a matter of fact, if words are held to be eternal, the science of grammar, which teaches the formation and analysis of words, should necessarily become useless.1 The author of the Varttika meets this position by holding that the principles laid down in grammar serve to put a stop to certain undesirable consequences.2 One may, for instance, be led to think that the root mri always retains the form mrji in all declensions (according to the wording of the Dhatupatha); but grammar in such a case brings forward certain restriction, viz., grammar teaches " that the root mrj changes to mārji (gets Vrddhi), when it is followed by suffixes other than Lit.

By categories of Sanskrit grammar, we mean precisely the fundamental concepts of grammar. Sabda is pre-ominently the basis on which rests the entire structure of grammatical science.

44

As Sabda is intimately related to thoughts logic, the extent of Sabda-sāstra immensely wide. The cateseems to be gories of grammar, looked at from a wider point of view, comprehend almost all those that are enumerated by the Vaisesikas. Mention, is here made, among others, of the following grammatical concepts:—(1) Genus and individual (जातिव्यित्ति), (2) Co-inherence (सामानाधिकरण्य), समवाय (inseparable connection), (3) Hetu and Karana, (4) Quality (गुण), Substance (द्रख), Relation (सरबन्ध), Parts and the whole (अवयव and अवयवी), Prakṛti and Vikṛti, and Efficiency (ম্নি:). The inclusion of Śakti in the grammatical categories marks, however, a departure from the Nyāya-Vaisesika stand-points.

First, both class and individual are taken by the grammarians as the significance of all words. There is, as we know, a great controversy as to whether words denote a class or an individual. The two well-known grammarians Vājapyāyana and Vyādi held opposite views with regard to this problem, the former, like the Mīmāmsakas, was an exponent of the Class-theory, while the latter advocated the Individualistic theory. We have elsewhere pointed out that the Naiyāyikas' seem to have brought about a reconciliation between these contradictory views by holding that it is neither class nor individual alone that is usually denoted by words, but an individual qualified by the class (जात्यविक्वित्रव्यिता) is the meaning of all words. As to the view of the grammarians,

Patañjali is of opinion that both class and individual are taken to be the sense of words. He particularly observes that Pānini had the same view before him while framing the rules of grammar.

It is not only in the Nyaya system of philosophy that we frequently meet with such terms as मामानाधिकरस्थ or co-inherence and कारण or cause, but grammar also has these concepts and their proper expositions. The term मामानाधिकरस्थ means 'the state of being substratum of two qualities' The class of compound known as Karmadhāraya is based upon the conception of such co-inherence. In an instance like नीसोत्यसम्, both blueness and 'the state of being lotus' inhere in a common substratum, ie. lotus.

There is an elaborate treatment of both Helu and Karana in Sanskrit grammar. The very conception of Kāraka is intimately related to that of cause (क्रियानिमित्रं कारकम्) By Hetu is meant the material cause. In the grammatical conception of Hetu,¹ we should remember, there is no room for action. Karana or instrument, defined as a 'cause associated with action' (आपादन कारणे करणम्) is intimately related to action. There is, however, no essential difference between Hetu and Karana, it is only the association with action that makes the difference.

The question of quality comes invariably in connection with the consideration of Visesana

Vyanjana, Itaravyāvartaka and Dharma generally the terms whereby is The grammatical conception denoted. quality is almost the guna. or as we find in the Nyāya-Vaisesika systems. Patanjali seems to have only reproduced a Sūtra of the Nyāya philosophy while he enumerates guna as sound, touch, form, smell and taste. Under the rule 4.1.44. Patanjali has made an attempt to give a clear definition of quna. Guna, he holds, is what inheres in substance, sometimes liable to destruction, found different classes, not produced by action and essentially different from substance. Elsewhere, he explains guna as what serves to distinguish an object from others (belonging to the same class भेदका गुणा:);2 as, for instance, the same entity as water is said to be either hot or cold, according to the difference of quality. Further, he continues that gunas are also found to be non-differentiating (अभेदन), as a man, say Devadatta, retains the same name, no matter

whether he is a boy, young or old.

[े] सत्त्वे निविश्तेऽपैतिपृथग्नातिषु दृश्यते । श्राधेयशामियानस् सीऽसत्त्वप्रक्षति-र्गणः । And उपेत्यन्यज्ञहात्यन्यदृष्टी द्रव्यान्तरेष्वपि ।

[—]Mahābhāṣya under the rule, Pāṇ., 4. 144. याचक: सर्वेलिङ्गानां द्रव्यादन्यो गुण: सृत:।

² and ¾ Mahābhāṣya under the Vār. भेदकलात् गुणस्य, Vol. I, p. 41. एकोऽयमात्मोदकं नाम तस्य गुणभेदादन्यत्वं भवति। अन्यदिदं शीतमन्य-दिदमुणमिति।

उभयमिदं गुणेषूत्तं मेदका अमेदका इति।

grammatical idea of Pisesana (इत्रावानर्तक्षमं) is, therefore, essentially the same as that of gung. According to the grammarians, words like net, etc., are expressive of both the quality and the object qualified. Bhartrhari, while speaking of guna, gives much stress 1 differentiating character as well as on dependent 2 nature of guna, dependent nature means that we cannot conceive of a quna or quality without considering at the same time a substance in which that particular quality might inhere (द्व्यपारतन्त्राम and भेदकलम् प्रधानगुण्नचण्म्). Much has been said with regard to the object and quality in Sanskrit grammar, specially in the Mahābhāsva. According to Bhartrhari, genus, such as nea, is also included in the category of quality.

A substance is the substratum of qualities (गुपाच्या द्व्यम्). Patanjali defines substance ³ as what does not lose its essence even when different qualities come to inhere in it. A fruit, for instance, remains the same, when in course of time its blueness gives way to redness.

² संसर्गिभेदकं यदात् सव्यापारं प्रतीयते । गुपलं परतन्तवाधस्य ग्रास्त स्टाहतम ।—Vökyapadiya, 3, p. 145.

यस्य गुणानरिष्विप प्रादुर्भवत्सु तस्त्रं न विद्वयते तद् द्रव्यम् १—Mebābbāṣya under the rule, Pāṇ, 5, 1, 119.

Bhartrhari 1 holds substance to be eternal and enumerates soul, object, nature, body and the four elements as synonyms of dravya. We give below the sum and substance of what Helārāja has said in connection with Dravya. Dravya, he maintains, is of two kinds:2-transcendental and popular; it is the latter that are comprehended by Vyādi when he says that all words signify substance. Brought up in an atmosphere of sacred traditions and religious culture, the Hindu teachers are generally found to have approached all problems from a standpoint that is more or less metaphysical. Thus, while speaking of so concrete a phenomenon as Dravya, they have brought in the subtle q estion regarding the ultimate nature of substance, as conceived by different philosophers. Dravya, looked at from the transcendental standpoint, is the same as Soul. Those who support the non-dualistic view are of opinion that it is the all-pervading Soul alone that manifests itself in manifold object and appears to be diversified in association with different qualities (उपाधि). The Buddhist philosophers hold that an object (वस्त) having its own identity as its own mark (खलचण्म) and capable of doing works is known as Dravya. The followers of the dualistic view understand

^{ें} द्रव्यं दिविषं पारमार्थिकं व्यावहारिकं च ।—Under the Kārikā, 3, p. 85

existence or nature by *Dravya*. According to the view of Cārvāka, the four elements, namely, earth, water, light and air which, in their particular combination produce the body and senseorgans, are considered to be *Dravyas*.

Sambandha or relation is of various kinds :-it may be one of Fācya-Vācaka, as exists between a word and its sense; or, one representing Bhedaka-Bhedya, as is to be found between Prakrti and Pratyaya, and as cause and effect and so on. Words and meanings are mutually both cause and effect, so far as the verbal-knowledge is concerned. Having shown that the mean. ings of words are either class or individual (wife or व्यक्ति) or, an individual conditioned by the class. we now turn to the question as to how a particular word always seems to be associated with a particular sense. As this question has already been dealt with, a few words are only needed to 12 explain the relation that exists between words and their meanings. The reason as to why a particular word always implies a particular sense points to the existence of certain relation. whether conventional 2 or fixed by nature, otherwise the word gauh might have signified a pot and so on. The Mimamsakas and the grammarians held, as we know, this relation to be

¹ ग्रन्द: कारवमयैथ म हि तैनीयजन्तते ।-- Vākyapadiya, p 112.

eternal, while the Naiyāvikas explained it as fixed by Gars will (संकेत). The question of Sambandha occupies a prominent place in Sanskrit grammar. In grammar Sambandha is generally denoted by षष्ठी which is technically called Sesa. Under the rule Pān. 1.1.49, Patañjali says that the meanings of षष्ट्री are one hundred in number. One Sabda is said to be related to another when both of them have close affinity regarding their places of utterance. Besides this, words may have among themselves some such relations as proximity, posteriority, etc. (आनक्तये, सामीध्य).

Samavāya or inseparable connection is one in which a quality stands to the object. In carmani dvīpinam ha ti—the relation of skin with the leopard is one of Samavāya.

Avayava and Avayavī or parts and the whole form another concept of grammar. The class of compound known as Ekadešī Samāsa, the Paribhāṣās, such as, Ekadeśavikrtamananyavat, Avayavaprasiddheh samudāyaprasidhirb līyasī, and the particular division of Adhikaraṇa, as Aikadešika are instances that prove the grammatical conception of Avayava and Avayavī. Like the Naiyāyikas, the grammarians do not take the whole to be a distinct entity from the parts of which it is composed, but consider it simply as an aggregate of parts.

अभ्यन्तरय समुदायेऽवघवः ।—M. B., 1. 23.

The grammarians have taken Praktti to be the final element of words; it is either Nāman of Dhātu. In instances like Yūpāya dāru and Kundalāya suvarnam, the grammarians take both post and earring as modifications of wood and gold respectively. Thus, Praktti also means the original in 'ation to Prārti of modification. To the Sāṃkhyaites, Praktti is the primordial substance out of which the entire universe has evolved. Bhartrhari has also started with the doctrine that the whole world may be viewed as only Vivarta or modification of Sa'da-Brahman.

In considering the fundamental concepts of grammar, we can logically put forward what Bhaitrhari has said in connection with efficiency 1 (Sakti) and its different manifestations, 1 such as, space, agent, action and time. The conception of efficiency comprehends in itself the idea of objects; we cannot, to be more clear, . conceive of any efficiency without thinking of certain objects with which it is naturally associated. We can, for instance, hardly think of the power of burning unless we think of fire at the same time. Efficiency and the efficient object, therefore, seem to be practically inseparable. It was on the ground of such inseparable connection that the Naiyāyikas did not include efficiency in their categories, as an entity distinct

ग्राह्म प्रतिष्ठ पराधानामधन्तमनविख्यता: । दिक् साधन क्रिया काल इति वस्तिधायिन: |—Vākyapadiya, 3. 1., p 167.

from the object. The grammarians, however, admit that efficiency, though parctically dependent on the object (dravyaparatantra), has got its independent character too. Though inseparably connected and entirely identical with objects, efficiency has its own form (Siddhasvabhāva), since all objects are found to exhibit some efficiency or energy, as we may call it, when they perform some actions. What is true is that such efficiency is not directly implied by words which signify objects. Patanjali has clearly shown that the thing and its quality or efficiency, though related inseparably, are different; as, for instance, in using the comparative and superlative forms, such as, sweeter and sweetest, we do not apply the degree of excellence to the thing itself but to its quality, i.e., sweetness.

Both space and time are regarded as *Dravya* by the Naiyāyikas, but the grammarians take them as efficiency inherent in objects. Space involves the notions of limit, priority, posteriority, and so forth. Generally, we have the idea of space when we say 'This is prior to it;' 'This is posterior to it;' 'From this place onward,' and so on. In instances like these, we get the fifth case-endings denoting *Avadhi* or *Apekṣā*. But when the relation between the whole and the parts is meant, we have Ṣaṣṭhī, as in *Pūrvam Kāyasya* (the fore-part of the body). The Vaišeṣika system also mentions space as a

¹ परापरले सूत्तीनां देशभेदनिवस्तने।—,Vākyapadīya, 3, p. 159.

Drarya, and takes space as one eternal entity without division. The so-called divisions of space, as north, west, east, etc., are only conventional; they are usually determined by the motion of the sun (Adityagatyā).

Next we come to the second manifestation of efficiency, i.e., Sadhana or activity. This Sadhana i implies that energy or activity of a thing whereby actions are performed As an instrument of actions, this Sadhana is of great importance, so far as the grammatical conceptions of cases, such as Nominative, Objective, Instrumental, etc., are concerned. The word Sadhana may be taken as a synonym of Kāraka, as both of them imply an agent or instrument of action. Pataniali has identified Sadhana with the combination of qualities (Gunasamudāyah Sādhanam). What is true of a quality is that it always appears as a distinguishing mark of the thing wherein it inheres and this is exactly the case with efficiency also. Helaraja, therefore, is of opinion that the statement Sadhanam2 vai Dravyam of the author of the Mahabhasya may be explained as implying the identity of Sadhana with efficiency. It is by drawing an identity between the efficiency and the efficient thing that Patanjali has sometimes attributed

¹ किशाचासभिनियमी सामध्ये साधनं विद्व: [—Vākyapadiya, 3, 1, p 173

[े] यत्तु साधनं वे द्रव्यमिति माणे द्रव्यस्य साधनलाभिधानं तत्त्वक्षत्रि गत्तिमतोमदा-विवचस्यवयनत्त्रव्यम् ।—Ilelaraja under the Kar, 8 1, p 173

'Sādhanatva to things also. As a solution of the question as to why efficiency is considered to be Sādhana or active agent and not things themselves possessing such efficiency, Bhartrhari continues to say that the whole universe seems to have been made up of efficient force (Sakti-kalā) which reveals itself in manifold thing. The manifold aspect and diversified character of the world is due to the corresponding plurality and diversity of this efficiency. Patañjali understands by active agent 'an aggregate of quality.'

Time is held to be a kind of efficiency. The Naiyayikas, as we know, have treated of time as a Dravya. Time is said to be the ultimate substratum of the world; it is indivisible and eternal. In grammar, time has an important place as indicative of tenses. Patanjali 2 defines time as that whereby both growth and decay of objects are perceived. The division of time into day and night indicates some sorts of conjunction of actions with time; action or $Vy\bar{a}p\bar{a}ra$ means here the motion of the sun. is immaterial and conceived as a of eternity. The popular division of time into moments, hours, etc., are only artificial. grammar, we hear of three-fold division of time, namely, present, past, and future. Under the rule Pān. 3.2.123, Kātyāyana 3 rightly observes

¹ कालो हि जगदाधार: कालाधारी न विदाते।

² येन मूर्तीनासुपचयाश्रापचयाश्र लच्चन्ते तं कालमाह:।
—Mahābhāṣya, Vol. I, p. 409.

[ै] सन्ति च कालिक्सागाः।— $V\bar{a}\tau$. 5. तिष्ठन्ति पर्वताः। स्थास्यन्ति पर्वताः। तस्युः पर्वताः।

' that time, though essentially indivisible, is spoken of as present, past and future in the science of grammar, Patañjali has given three instances indicating the three different divisions of time, as 'Mountains exist;' 'Mountains existed' and 'Mountains will exist,' and goes on to say that in the above examples the existence is to be understood as pertaining to the action of the kings that are either present, past or would come in future.1 Patañjali has also shown the divergent views regarding the existence of such a division of time as 'Present time.' Some ' say, he continues, that there is nothing like present time. Their view is thus represented :-'The wheel does not exist, nor the arrow is thrown; the streamlets do not flow towards the sea. The whole universe is motionless; there is nothing that moves; he who can realise it is not blind.' The second and third verses quoted by Patanjali remind us of the arguments whereby the Madhyamika's school of the Buddhist philosophy set aside the popular divisions of time. Some,4 again, hold, on the contrary, that there is

"न वर्तते चक्रमिषु ने पायने न रुव्हने स्टित सामराय। कृटखोऽय लोको न विचेष्टितास्ति यो छोव पम्यति भोऽष्यनस्य।

⁻M Bhasya, Vol II, p. 124.

present time, though it is imperceptible like the sun's movement Patanjali seems to have been a scholar of wide culture and thoroughly acquainted with the principal systems of Indian philosophy, consequently it is not unlikely that he might have studied the Buddhist philosophy as it existed in his time.

Next we come to $Kriy\bar{a}$ or action as the last manifestation of efficiency. The conception of $Kriy\bar{a}$ plays an important part in Sanskrit grammar, specially in connection with $K\bar{a}rakas$. $Kriy\bar{a}$ is the meaning of verbal roots ($Dh\bar{a}tvar$ -thah $Kriy\bar{a}$). $Kriy\bar{a}$, holds Patañjali, is immaterial, invisible and is only comprehended by inference.

The method followed throughout Sanskrit grammar is purely analytical: grammar does never attempt to coin new words, but dissolves words into their radical and formative elements in accordance with the principle of Anvaya-Vyatireka or the method of agreement and difference. The Indian grammarians, as have said elsewhere, had a conception scientific methodology, as is clearly evidenced by the way in which they had analysed words of so diversified character and determined their Prakṛti and Pratyaya. The grammarians had to experience great difficulty in the course of analysis of words. The author of the Mahābhāṣya gives us clear idea as to how the grammarians, proceeding on the line of Anvaya-Vyatireka,

succeeded in distinguishing the radical from the formative elements. We do not like to repeat here what we have already said. It will suffice here to point out that the grammarians seem to have taken a group of similar forms such as, ghafah, ghafena, ghatat and pacati, pacatah, apaksit, otc., and then proceeded to find out the common and uncommon elements in them. Now the common or unaltered element, namely, ghata and pac, which has not undergone any important change in all those forms is called Prakrti; the uncommon elements, on the other hand, ing, at, ti, tah, which are liable to variations in different forms, are termed Pratyaya. This is, in short, the process whereby the grammarians could successfully dissolve the words.

Though the adherents of the doctrine of Sphota take all words to be indivisible and eternal and look upon all such disintegrations as purely artificial, we do not fail to notice the scientific value of such a procedure that furnishes an instrument to get into the meaning of words. There are three forms in which words generally appear : sentence, inflected form, and the radical and formative elements. Of these, a sentence is the logical unit or the significant part of speech. Words, as we have already said, have no independent existence apart from a sentence. According to the Valyavadins, i.e., those who take a sentence to be real, indivisible, and the only significant unit, the analysis of a sentence into its constituents, i.e., Padas, is at best artificial, but recourse is taken to this process, however imaginary, as it provides the only means of showing the meaning of a sentence. The Padavādins, on the other hand, hold that Padas are real, and seek to prove the unreality of a Vākya, as an indivisible unit. A sentence, so to speak, is nothing but an aggregate of Padas, consequently a sentence has no separate existence apart from its constituents. The aphorism of the Prātiśākhya defining Sandhi is construed by the Padavādins in such a way as to indicate the priority of Padas to Samhitā and the reality of Padas is thus sought to be established. According to them, Padas, though essentially indivisible, are analysed into Prakrti and Pratyaya in order to bring out their significance. The decomposition of words into Prakrti and Pratyaya is the central problem upon which are concentrated the entire speculations on grammar. It is by such analysis it is often called, that the or Samskāra, as Sanskrit grammarians could exclude Apabhramsas from coming under the cognisance of their systems of grammar. The view of Pāṇini and Patañjali, as explained by Bhartrhari and Helārāja, shows that both of them were in favour of the Vākyavādins, i.e., Padas are unreal and have no separate existence, whereas a sentence is indivisible and really significant by nature.

¹ पदप्रक्रति: संहिता (—Prātiśākhya. पदानां संहिता योनि: संहिता वा पदाश्रया |—Vākyapadīya, 2, 59,

The expression Padakāra, as used by Patañjali, is a sufficient indication that Padas are essentially unreal. It is simply for the understanding of unintelligent people that the grammarians have taken recourse to such an artificial process, as the separation of Padas from a sentence.

[े] न सचिन पदकारा चतुनको, पदकारेनेत्रस्वस्वस्तृत्रस्वेस्—Mahabhasya, Vol III, p 17. CHAPTER III

SAMJÑĀ AND PARIBHĀSĀ

Samjūā or grammatical technics—Paribhāṣās or axioms of grammar—Rules of grammar.

Every system of philosophy has its particular concepts and contains necessarily a set of corresponding terms that are more or less restricted in their sense. Terms of this description, which are specialised in their significance, are popularly called Samjñã or technical terms. The Nyāya system, specially the Navya-Nyāya, contains a large number of such technical terms. These words, it must be remembered, are not used by the Naiyāyikas in their popular sense. To a Naiyāyika the words Prakāra and Pratiyogin, for instance, are not denotative of kinds and competitive respectively, but usually express an adjunct and anything that non-existent.1 The use of such technical terms has manifold advantage. Samjñās often used for the sake of brevity and conciseness, and are consequently adopted in most of the treatises on science in their respective fashions.

¹ यस्याभाव: स प्रतियोगी।

A Samjñā generally means an enunciation or mention of something by name. Vātsyāyana has used the word उद्देश:, as a synonym of Samjñā, and holds that the logical or scientific procedure comprehends enunciation, definition and examination, as necessary for the scientific treatment of a subject. The grammarians also, as is evident from their method of treatment, have followed this scientific process. To enumerate something by name is what is known as Samjñā and those that are denoted or comprehended by such Samjñā are called Samjñī. Patanjali defines Samjñā as a shortest name which is adopted for the sake of brevity.

In the Sūtra ছাৰ্মাইন্ Pān. 1. 1. 1, the word ছাৰ: is a Samjāā and মান্ and ऐন্ are Samjāā? But how are we to know that it is a Samjāā? The Sūtra quoted above forms the opening aphorism of Pāṇini and there is no preceding rule like Samjāā that may be taken as an Adhikāra-Sūtra. The question raised by Pataūjaili's is that Pāṇini ought to have used the word Samjāā before the rule ছাৰ্মাইন্, so as to avoid the ambiguity as to whether হাৰ or মাইন্ is to be taken as Samjāā. To recognise Vrādhi as a Samjāā naturally presupposes an adequate conception of Samjāā itself. Pataūjali further observes that even the

¹ नाममाचक्यनं संचा।

विविधा पास्य शास्त्रवृत्तः—उद्देशो लचलं परीचा चेति ।

हड्डादीनां गन्दानां संजीवय संप्रवयो यथा स्थात्।

enunciation of संज्ञाधिकार is not sufficient enough to give an accurate cognition of Samjñā and Samjñī, as there is hardly any evidence in favour of accepting the word $\mathcal{V}_{?}ddhi$ as a $Samj\tilde{n}\bar{a}$ and आदेच as Samjñī. He then refers to the ancient teachers whose usage is the only criterion for the precise knowledge of a Samjñā. That the word Vrddhi denotes a Samiña (as opposed to a Samjñī) and not a Samjñī is evident from the usages of the ancient grammarians. The fact is that the technical terms like Guna and Veddhi, as used in the Astadhyayi, are not really of Pāṇini's invention, but they are rather supposed to have been borrowed from earlier systems of grammar. Similar is the history of all proper names, both popular and the Vedic; as, for instance, the name 2 Devadatta, with which parents baptise their newly-born son, continues to gain currency in the society by the force of popular usage. Another view that seems to be none the less plausible is that the grammatical technics, such as, Guna and were too popular terms to require any exposition or even enunciation. It is probably for this reason that Pāṇini did not think it worth his while to make a distinct rule as $Samj\tilde{n}\tilde{a}$ as would facilitate the knowledge of Samjñā.

¹ श्राचार्याचारात् संज्ञासिडि:। यथा लौकिकदैदिनेषु |--- Mahābhāsya, Vār. 4.

Patañjali continues further that some grammarians, while interpreting the rule in question, have clearly indicated that the word Pradhi is a Samjaa and पारैच is Samjai. In order to bring out the exact significance of the rule afferige. some grammarians, again, have (only given the examples of Piddhi as, प्रसैपीत, श्रकापीत्) only enumerated the Saminis of Vradhi, such as, चारैच, under the rule सिचि हृद्धि: परकेपदेषु and have thus made it sufficiently clear that the word Pr idhi is expressive of पादैच् in grammar. The relation between the words Frddhi and Adaic is. therefore, one of the indicating and the indicated. The rule serves practically a two-fold purpose: it expresses a Samjñā as well as makes the word Vrddhi a Samjñā. What Patanjali' deduces from these facts with regard to the distinction . between Samiñā and Samiñi is that what implies something 14 a Samjaa and what are so implied should be regarded as a Samini. The author of the Varttika has suggested two more criteria so as to show the distinction between Samiña and Samiña more clearly. (1) Samiñā is formless,2 whereas Samiñīs are found to have forms It is a fact of common experience that a Samiñā, like Devadatta, is given to a mass of flesh having certain form

¹ तें सन्यामहे यया प्रवायको सा सन्ना ये प्रतीयने ते संज्ञित इति। Mahābbāṣṣa, Vol. I. p. 88

[ै] पनाकृति .— Var 6, Bhasya प्रयानाकृति रेजा। पाकृतिमस्त मृज्ञिन,। लोके,पि फाकृतिमती मांमपिष्टम्य टेबर्ट्स इति मृज्ञा क्रियुत्ते।

Again, where there is a form, there is a difference. Moreover, Samjñā is one, while Samjñīs are more than one. (2) A Samjñā may be recognised by some special mark.1 Patañjali holds further that Samjñā and Samjñī, like nouns and adjectives, seem to have co-inherence as well as equal case-terminations. To the grammarians, Adaic (which is formed by the process of Pratyōhāra from the letters enunciated in the so-called Siva-Sūtra) is really expressive of sense. Some, again, take the word Vrddhi as indicative of the forms of words, viz., the word Vrddhi and Adaic are mutually convertible. Patanjali few more characteristics has suggested a whereby Samjñā and Samjñī might be clearly recognised. Samiñās, he maintains,2 like Vrddhi and Guna, are repeatedly mentioned in grammar, but such is not the case with their corresponding Samjñīs, for it is more convenient and attended with more economisation of labour to mention a Samjñā, say Vrddhi, than enumerate each time Adaic which contain greater number of letters. When Samjñās are really adopted for the sake of brevity and conciseness, the word Vrddhi is preferable to Ādaic from a practical point of view. Further, it often comes to our notice that Sāmjñī is , placed before the $\mathit{Samj} \tilde{n} \tilde{a}^{3}$ in the rules of grammar

¹ लिङ्गेन वा। - Vār. 7.

² श्रावित्तेनाः मंजा भवन्ति । हिल्लाम्बद्यावर्तते नारैक्टव्सः !-- Ibid.

अथवा प्रवीचारित: संजी, परीचारिता संजा |—Ibid.

(as in पदेहण:). But the rule ष्टेडिरादेच forms an exception, as the word Prddhi comes here first. This anomaly is explained by Patanjali as a particular instance where the word Frddhi has been! given priority only to indicate a sense of auspiciousness (महाचार्यम्). Both Samjñā and Samjñi being thus reciprocally convertible, a question is raised against their mutual dependence (अन्योन्याययत्). As a matter of fact, we get a Samin'i like Vrddhi for Adaic and the Samiña again serves to indicate Adgic. The defect of such mutual dependence is finally set aside by Pataniali on the ground of the eternality of word (सिरंस नित्यगब्दलात्-Var. 9). Adaic are permanent word-forms, for the denotation of which a Samiñā like Frddhi is adopted, but the Samiñā itself does not practically bring them into existence. The eternal view of Sabda * does not. however, render the science of grammar absolute. ly useless, since grammar, as it is primarily concerned with the exposition of correct words, serves to remove all possible confusion and misinterpretation by the formulation of rules.

Bhartrhari has even tried to show the permanent character of such Samiñā-Sabda and acknowledges the relation between Samjñā and Samjñī as permanently fixed.3 But this view is open

to objections and is contrary to our experience. Samjñā or proper names are purely of human invention, men giving names to objects according to their own desire. The arguments whereby Bhartrhari sought to refute this popular view are as follows: It is admitted that in certain cases Samiñās are restricted in their denotations by the usages of men; as, for instance, one might say, 'From this day the word Ditha would mean this person.' But so far as the relation between a Samiñā and a Samiñī is concerned, there is no denying the fact that the word Ditha, 'like the word gauh, is also connected with its meaning by permanent relation.2 Bhartrhari has divided Samjñās into two classes-Krtrima (as ti, ghu, etc.) or artificial, and Akrtrima (as Ditha) or popular names current in the society. The so-called artificial $Samj\tilde{n}\bar{a}s$ are of modern origin; their significance is confined to the area of those Sastras wherein they are used, that is to say, they have no meanings popularly assigned to them.

Having thus discussed the different criteria for the recognition of Samjñā and Samjñā, we now proceed to speak a few words more on the

number and nature of such Saminas. Different systems of grammar have their different Samiñas; as, for instance, Panini uses ac and hal whereas Katantra system has Svara and Vynjaña in their stead. It will be evident from a study of these Samiñas that most of them are meaningless outside the short compass wherein they are used; they are neither to be found in lexicon, nor current as significant words in their specialised sense. Samjñā-Sabda, as a rule, are not derivable (অুর্থর); and though popular words, such as, Vrddhi, Guna, etc., are used as Samjñā, their popular significances have practically no connection with what they signify grammar. Bhartrhari says that the meaning assigned to such Samjñā-Sabda by the grammarians is to be taken as modern convention, as opposed to the divine convention. It is to be noted here that the two Samiñā-Sabdas, namely, Svara and Pynjana, as are to be found in Yaska's Nirukta and in the Kātantra system, and which are undoubtedly older than ac and hal respectively, are really significant (खरं राजते इति खरः, व्यवनमन्द्रक). It is, therefore, believed that the Katantral system has preserved the old grammatical technics more faithfully than that of Panini, who is rather credited with

¹ Kātantra system has also retained such old grammatical terms as Kōrtia (Pāṇini has vio), Vərtamanā (bhabantī seems to have been the oldest term for Vārtamānā), Bhavisyanti, etc.

having invented a peculiar way of enunciating letters, a system of $Praty\bar{a}h\bar{a}ra$ unknown to other grammarians, and certain technical terms like ac and hal, etc.

The word Samjñā means ordinarily a name. Just as an object is found to have a good many names in popular speech, so in grammar a form may have different Samjñās. It is to be borne in mind that excepting a few instances like Svara, Vynjana, Lopa, Dirgha, etc., as used in grammar, there are Samjñās as nadi, ti, ghu, etc., which are absolutely meaningless and purely artificial. There are in grammar; they are numerous Samjñās made use of by the grammarians view to secure the brevity and conciseness. They may be, however, divided into two classes, according as they are significant and meaningless. The Samjñās belonging to the group are almost the same as used in popular speech, though with a specialised significance, while those that come under the second group are absolutely meaningless except in grammar. There are certain Samjñās, such as, Nadī, 2 Agni,3 Śraddhā4 which are used as types to denote respectively words ending in lengthened ई, জ, short इ, इ, and lengthened अ. The so-called Siva-Sūtras,

though unintelligible by themselves and entirely meaningless to others, representing a great departure from the popular order of letters, have great importance to the students of the Aştādhyāyī, as they are suitable for making Samjñās like an, in, etc. Jagadīša understands by Samjñā 1 all names having convention or Samketa and classifies it under three classes, namely, Naimittiki, Paribhāşiki, and Aupādhikī. Samiñās are artificial; their origin may be traced to an attempt to find out the shortest symbol to denote a group of individuals. The system of Samiña is thus important for more than one reason; it is the shortest possible name for a class and consequently marked by brevity. The Samjaas adopted in different systems of grammar are so variant that one cannot expect to make a successful study of any system of grammar without having a thorough acquaintance with its particular sets of Saminas.

Logic means agreement of facts with truth. Grammar in dealing with the formation of words and formulation of rules has sometimes shown strict comformity to truth. What is true of logic is thus true of grammar too. Science, as is well known, takes for granted certain axioms which are more or less self-evident truths and consequently require no explanation. These axioms or generalised

though unintelligible by themselves and entirely meaningless to others, representing a great departure from the popular order of letters, have great importance to the students of the Astadhyayi, as they are suitable for making Samjuas like an, in, etc. Jagadisa understands by Samjāā all names having convention or Samketa and classifies it under three classes, namely, Naimittiki, Paribhāṣikī, and Aupādhikī. Samjūās are artificial; their origin may be traced to an attempt to find out the shortest symbol to denote a group of individuals. The system of Samjñā is thus important for more than one reason; it is the shortest possible name for a class and consequently marked by brevity. The Samjāās adopted in different systems of grammar are so variant that one cannot expect to make a successful study of any system of grammar without having a thorough acquaintance with its particular sets of Saminās.

Logic means agreement of facts with truth. Grammar in dealing with the formation of words and formulation of rules has sometimes shown strict comformity to truth. What is true of logic is thus true of grammar too. Science, as is well known, takes for granted certain axioms which are more or less self-evident truths and consequently require no explanation. These axioms or generalised

¹ क्ट मंकतवज्ञान सेव मंत्रीति की र्रोते,—Babdasaktıprakasıka Kur. 17.

statements (deductions) are freely made use of by different systems of philosophy. These are deduced from common experience. Geometry, for instance, begins with a number of such axioms (e.g., the whole is greater than its parts) and shows their applications in the exposition of problems. Logic, as a science, has also its particular axioms (a thing is what it is, viz., the law of identity) which are not. only applicable to logic alone but are found to be used in other departments of science for their incontestable validity. Here we find the reason why logic is popularly called the 'science of all sciences.' It has added doubtedly to the scientific character of grammar, for it has also treated of such axioms. These axioms or generalised statements are known in grammar as Paribhāsās. The fact that is established by the Paribhāṣā¹—'A thing does not essentially become a different one even when some of its parts get deformed,' or, more clearly, 'A dog does not become anything but a dog when its tail is cut off'-is one of common experience and equally true in ordinary life also. In grammar we find a good many Paribhāṣās. The Paribhāṣās, as used in grammar, may be explained as what represent the highest grammatical generalisation. The Paribhāsā may be broadly divided into two classes: (1) Paribhāsās which are not restricted in their

applications to grammar alone but equally hold good in other spheres of experience; (2) Paribhasas that are closely associated with grammatical operations and contain technical terms of grammar. The Paribhasas like undar-विक्रतमनन्यवत्, etc., which does not contain any grammatical term and are true to all sciences, belong to the former group of the Paribhāṣās. Paribhāṣās falling under the second category are those that contain grammatical technics and are couched in grammatical terms, as, यशोहेशं संजापरिभाषम, उपपद्विभक्तेः कारकविभक्तिर्व सीयसी, etc. These cannot be explained for obvious reasons without reference to grammar. From a study of the Paribhagas belonging to the former class, it appears that they are decidedly the older and more popular than those coming under the second group. We fail, however, to trace their origin with a degree of certainty. They are sometimes presupposed by the rules of Panini and sometimes deducible from the rules of the Astadhyavi. Panini had undoubtedly before him many axioms of this description when he composed the rules of the Astadhyayı. It is clear from the statement of Nagoji1 (who has collected these Paribhagas-122 in number and explained them) that some of these Paribhāsās were used as regular

¹ प्राचीनवैद्याकरचतके वाचनिकात्रक पाचिनीयतके आप्रकर्पायधिङानि भाष्यवार्ककवीर्मिक्डानि यानि परिभावादपाचि तानि व्याष्ट्राधको ।

Sūtras by older grammarians. Pānini has, however, incorporated some of these Paribhāṣās in his Aṣṭādhyāyī¹ and some of them are suggested by the rules. The Paribhāṣās established by either Jñāpaka or Nyāya have been refered to by Kātyāyana and Patanjali. Generally speaking, there are three kinds of Paribhāsāś:—(1) Vācanikī—verbatim used as Sūtra by older grammarians; (2) Jñāpaka—as deduced from the interpretations of Panini's rules; (3) Nyaya referring to the axioms either taken from the experience of ordinary life or established by logical inductions. There are, again, two different forms of Nyāya-Nyāya-Siddha and Loka-Nyāya-Siddha. The Paribhāsā— सनिपातलचणो विधिरनिमित्तं तिद्वधातस्य—is an instance of Loka-Nyāya-Siddha, because the truth it conveys is sufficiently proved by the facts of daily life, viz., 'A thing should not be the cause of destroying that wherefrom it derives its very existence.' These Paribhāṣās are of practical help to us for understanding the rules of the Aşṭādhyāyī. Nāgojī has not only taken notice of those Paribhāṣās alone which might be deduced or taken directly from the Varttika or Bhāṣya, but has undoubtedly treated of the Paribhāṣās taken from other grammarians. There is a Paribhāsā 2 which expressly enjoins

समर्थ: प्रदिधि: I-Pān. 2. 1. 1. विप्रतिषेधे परं कार्यम्। — Ibid, 1. 4. 1.

व्याख्यानतो विभेषप्रतिपत्तिन हि संदेहादलचणम।

that for the removal of doubt and ambiguity in connection with a rule of grammar, the interpretations of the learned commentators are to be regarded as the only authoritative and decisive ones. Some Paribhūṣūs with their respective meanings have been referred to in the 'Linguistic Speculations of the Hindus' under 'Logic of Grammar.'

Having shown the nature of Saminas and Paribhāsās according to their grammatical interpretations, we now propose to say a few words regarding the characteristics of the grammatical aphorisms. The style followed by the grammarians in constructing the rules is the same as adopted in the so-called Sūtra literature. This style of composition, in which most of the standard works of Hindu philosophy have been written, was adopted by the grammarians, as they unduly favoured brevity and conciseness, sometimes to the extent of unintelligibility. How much the grammarians favoured brevity and conciseness in the composition of Sūtras is best illustrated by the Paribhāsā 'श्रर्थमातालाघ-वेन प्रतोतसर्वं मन्धन्ते वैयाकरणाः' The characteristic features of grammatical rules are as follows 1:-(1) The Sūtras should be so framed as to contain the least number of letters. (2) The Sūtras to be constructed in such a way as to avoid ambiguity and doubt. (3) The Sūtras

खत्याचरमधन्दिन्धं सारवत् विचतोसुखम् ॥ तिद्धिमनवर्यं च सूर्व स्विविदं।
 विदः।

must be impregnated with meanings. Paṇini is said to have composed the rules of the Aṣṭādhyāyi with all religious solemnities and great caution, Patanjali strongly believes that even a letter of his aphorisms, far from speaking of the entire rule, is not likely to be meaningless. (4) The Sūtras must have widest applications. This is exactly the case so far as the general rules (डत्सर्गविधि:) are concerned. (5) The Sūtras should be free from all defects and reasonable at the same time. The Sutras having these qualifications generally fall under six categories, namely, Samjñā, Paribhāṣā, Vidhi or rules that enjoin something, Niyama or rules that enjoin restrictions, Pratisedha or prohibitive rules, and Adhikāra. Samiñā Sūtras are those that point out grammatical technics, such as, Vrddhi, Guna, Lopa (disappearance), ac, hal, etc. As regards the Paribhāṣā Sūtras, we have already pointed out that certain Paribhāṣās were incorporated by the grammarians in their systems of grammar as regular Sūtras. The Adhikāra Sūtras are of four kinds.2 Patañjali has illustrated three different kinds of Adhikāra.

As to the principle followed in the formation of rules, it must be clearly stated that it was

प्रमाणभूत श्राचार्यो दर्भपविचपाणि: ग्राचाववकाशे प्राझुख उपविध्य महता यवेन स्वं प्रणयित स्व, तवाशकां वर्णेनाप्यनर्थकेन भवितं किं पुनिर्यता स्वेण।

[—]Mahābhāsya, under the rule Pāṇ., 1. 1. 1.
गोगृष: सिंहदृष्टिय मण्डूलम्नुतिरेव च। गङ्गासीत:प्रवाह्य त्रिधिकारयतुर्विध:।

indeed a great difficulty to make a thorough study of each word. We are told that Indra, oven under the tutorship of Brhaspiti, and continuing his study for a great length of time, failed to make an exhaustive study of words. How then the grammarians had succeeded in such an arduoutask? Patañjali rightly observes that the rules of grammar should be framed on the scientific basis of generalisation and particulurisation, so as to enable one to make a study of words, though so diversified and numerous, with the least amount of effort. He clearly shows that the rules and way Pap. 3, 2, 1 and stranguments. Pap. 3, 2, 3, were written by Papini having the same object in view.

Now as to what constitutes a grammar. Patañjali has elaborately dealt with the question in regard to what is precisely meant by grammar. It is too well known a fact that it is the Sutras that constitute grammar or, in other words, grammar is entirely identical with the Sutras. We use the word Vyūkarana with reference to a number of Sutras and do not practically understand anything else. But there are certain objections in the way of accepting this view as an accurate one. The difficulty that arises on the

¹ Mahabhanya, Vol I, p 5.

[°] चत्स्योदवादी। कविदृत्स्योः कर्मव्यः खविद्यवादः—Mahabhasya Vol I, p. 5

[ै] चय व्याकरचिमियस गप्टव्य कः पदार्थः १ मृतम्। सूते व्याकरचिपद्वाधीऽनुपः पद्यः ।--- Var 10 गप्टापतिपतिः । गप्टे सुदर्धः भवे । प्रोक्षादयय तिविधाः

assumption of identity between grammar and Sūtras is that the question of relation, as is indicated by the expression (व्याकरणस्य स्तम्) 'the rules of grammar' becomes necessarily incomprehensible or incompatible, that is to say, the above expression clearly indicates that grammar is actually different from the Sūtras. Again, no cognition of words would be possible, if grammar were identified with the Sūtras, because the knowledge of words does not practically follow from the Sūtras, but rather from the interpretations and expositions of such rules. Words are then held to be constituents of grammar and this view is considered to be sufficient to meet the aforesaid objection. But this is also not absolutely free defects, inasmuch as the identity of grammar with words would render the derivation of the term Vyākaraṇa (व्याक्रियन्ते व्युत्पाद्यन्ते ग्रब्हा अनेनिति) simply inconsistent. The drift of the arguments is that words are derived by means of Sūtras and not by other words. Moreover, the rules like सदे, प्रोत्ताद्यश्च, तत सवः, तेन प्रोत्तम्, etc., will be inconsistent with their meanings, if words are held to be identical with grammar. In fine, Patanjali sets forth the conclusion that words and Sūtras in their combination form the life of grammar (लच्यलच्णे व्याकार्णम्).

The word Sandhi literally means conjunction of two; in grammar it implies the combination of two letters having close proximity. The definition of Sandhi as given by Pāṇini (which is also to be found in the Nirukta) lays stress on the extreme proximity of letters, whether vowels or consonants, as the primary condition of Sandhi (Parah sannikarşah Samhitā).

It has already been pointed out that the word is the same as sound. A word is, again, of two kinds, namely, sound as produced by the beat of drum, and sound as distinctly audible and expressed by letters. To the former class belong those sounds which are not capable of being represented by letters and have no real expressiveness like popular words that consist of letters. These letters, whether 48 or 49 in number, represent phonologically all possible modulations of voice. There are eight different places, such as, chest, throat, nose, head, tongue, roof of the tongue, teeth and lips wherefrom letters are produced and they are named accordingly. The order in which letters are to be read is said to be fixed (Siddhovarna-samāmnāyah), but Pānini seems to have shewn some amount of ingenuity. as he gives rather a clumsy arrangement of letters only to serve the purpose of forming the Pratuāhāras. The method adopted by Pānini may be scientifically accurate, but it really marks a departure from the popular order of letters.

The subtle form of Nāda having its origin in the Mūlādhāra proceeds upwards till it reaches the vocal apparatus and becomes audible; it develops into distinct sound when it clothes itself with letters. This is usually the process whereby letters are produced. Letters are transient and liable to

disappear just after their utterance is over. According to the time required for pronouncing, a sound is said to be short, long and protracted. Letters are broadly divided into two classes: Svara and Vyanjana. Svara is so called because they are distinctly audible by themselves; Vyanjana requires the help of vowels for their intelligibility. The use of ac and hal in the place of more popular terms Svara and Vyanjana represents one of Pānini's manifold innovation.

There are generally two different ways in which words are uttered-rapid and slow. Patañjali maintains that close proximity is to be taken as the fundamental condition of Sandhi. It then follows almost naturally that no such Samhitā or the combination of letters takes place when two words are uttered at intervals. It is said in defence, however, that proximity of letters is the same, whether they are uttered rapidly or slowly. It is practically the time, as is required by the speaker to pronounce the words, that makes the utterance either rapid or slow. Three 1 definitions have been suggested to explain Samhitā, but no one is found to be strictly accurate and free from defects. The last tentative definition,2 which brings in the idea of order as priority and posteriority among letters, uttered

² पौर्वापर्यमकालव्यपेतं संहिता चेत् पूर्वापराभावात् संहितासंज्ञा न प्राप्नोति— न हि वर्णानां पौर्वापर्यसस्ति—Mahābhāṣya.

without any intervention of time, is also open to objection, because the very idea of priority and posteriority is inconceivable in regard to letters that are never uttered simultaneously. पीर्वापर्य is to be understood with reference to space, as we apply the terms Purva and Apara to things when they are found to exist simultaneously. But such is not the case with letters. It is practically seen that we cannot pronounce two letters at a time.1 The vocal organ that operates in pronouncing the letter ga is not the same that gives rise to au-sound and so on. Again, for the transient character of sound, ga is no longer existent when au is uttered. It is to be carefully noted here that Paurvaparva. as stated here, is not to be taken as referring to time, because letters are liable to destruction after the utterance is over, and there can be no relation as priority and posteriority between the existent and the non-existent letters Pataniali, then, arrives at the conclusion and brings the whole discussion to a close when he holds that Paurvānarva, as the essential requisite of Samhitā, pertains to intelligence, that is to sav. the determination of priority and posteriority of letters is the operation of intelligence.2 An intelligent man adopts the following procedure

¹ एकैकवर्णवितिलाडाच छद्यरितमध्योग्धलाच वर्णानाम्—Var 10. एकैकवर्णवितिनी बाक्। म ही युगपट्टचारयित। गीरिति ग्रकारि यावती वाक् वर्तते नीकारे न विश्वजनीय Mahabbāsya

[•] बुजिविषयसेव शन्दाना पौर्वापर्यम्—Mahābhāşya.

in ascertaining the order of Paurvāparya:—This word is to be used in this sense and this word consists of these letters. Then, he proceeds to determine them one after another.

There is another definition of Samhitā given in the Prātisākhya¹ which has also given rise to a considerable discussion. The main difficulty lies in the way of disjoining the compound Padaprakrti which admits of double pretation. If we take the expression Padaprakṛti as meaning पदानां या प्रकृति सेयं पदप्रकृति:, it would naturally follow that Sumhitā or combination is the original form of speech wherefrom Padas are separated. It is quite evident from this exposition that Samhitā represents the original form, whereas Padas are only modifications. According to another interpretation, which treats of the expression Padaprakṛti as an instance of Bahuvrīhī and lays down that Padas in their combination constitute Samhitā: Padas are to be taken as Prakṛti and Saṃhitā as merely modified forms. The question raised here is one of great importance, as it forms the fundamental problem of the linguistic science. The point at issue is to decide which of these (Samhitā and Padas) represents the original form. Durga 2 has advanced arguments to show that Samhitā is Prakții and Padas represent only Vikțti. He

पदमहति: चंहिता ।

[ं] मंहिताया: महतिहां न्याय: 1—Nitukto, p. 135.

has based his arguments on the fact that the Vedic Mantras have come down to us in their Samhitā form (but not as isolated Padas); Samhitā or combined forms are first studied by the Vedic scholars and the Mantras are specially recited in their Samhitā form at the time of sacrificial performances. It is an established fact that we do not meet with an instance of fater in the Vedic Mantras.

A careful study of the rules concerning Samhitā will make it clear that the principles underlying such Samhitā are based on regular phonological basis. The rule दकी यणचि, which enjoins that E, E, E, followed by ac. are changed to y, v, r, respectively, records rather a phonetic tendency according to which z+v. when uttered at a stress, are apt to take the form of z and so on. The transformation of इinto य, as in दध्यत, is due to the fact that both g and g are letters that originate in the same place and have necessarily natural affinity for combination. Jaimini 1 has clearly stated that in zwa letters do not undergo any modification but a new letter comes into exis-The rule स्थानेऽन्तरतमः enjoins that in case of Adesa, a letter having close affinity, either through the internal efforts or owing to the similarity of place of utterance, is to take the place and function of Sthani.

¹ वर्षां लरसविकार: Mim. Sütra, I.1. 13.

These instances will suffice to show that the rules of $Samhit\bar{a}$ are outcome of natural tendencies, as are illustrated by phonetic laws. In popular usages, $Samhit\bar{a}$ is sometimes obligatory and sometimes optional. It is thus stated in a $K\bar{a}rik\bar{a}$: $Samhit\bar{a}$ is obligatory in Padas; between roots and prefixes and in compounds; in all other cases $Samhit\bar{a}$ is optional.

There are, broadly speaking, five kinds of Sandhi, according to the nature of letters that enter into combination. Among these five, the so-called Prakiti-Sandhi (an instance of Sandhi which is not attended with necessary changes and modifications) forms a peculiar group. We call them peculiar in this sense that the instances of Prakrti-Sandhi are so rigid that they retain their original forms intact and do not come under the general principles of Samhitā. In an instance like late ime where no change is brought about by rules of Sandhi, it is really difficult to distinguish it from ordinary forms. In cases like this, Sandhi is to be determined only by accents. Similarly, compounds and non-compounds were distinguished in the ancient Vedic age simply through the instrumentality of accents.

When a conjunction between two letters takes place in $Samhit\bar{a}$, we usually find that two individuals do not retain their separate

मंहितैकपरे नित्या नित्या धात्पसर्गशी:। नित्या समासे वाक्ये तु सा विवचानपेचते।

forms but merge into one and consequently give rise to a new letter which, though practically different from them, has close affinity with those letters. In the course of combination, letters are sometimes dropped as in Prsodarah and sometimes, they undergo modifications as in Dadhyatra. The changes and modifications brought about by Sandhi are natural and not artificial. In etymological 1 explanations of words we find instances of productions of letters (Gavendrah), inversion of letters (Simhah), modifications of letters (Sodasah) and disappearance of letters (Prsodarah).

CHAPTER IV

THEORY OF SPHOTA

Theory of Sphota—identity of Sphota with Progara—its origin and nature—arguments against the assumption of Sphota.

The Hindu grammarians are credited with having for the first time enunciated the doctrine of Sphota which forms one of the outstanding features of Sanskrit grammar. It is at once the essence and result of Indian speculations on grammar; it embodies the careful ingenuity and keen-sightedness on the part of the Indian grammarians, and ultimately proves by drawing identity between Sphota and Brahman Sabda-tattva and Brahma-tattva are different in name but essentially convertible with each other. The grammarians have, however, carried this theory to such an extent traced the final germ of speech to so subtle an element as to place the dissertations on words more or less upon a metaphysical level.

The history of Sphota, judging from the height of contemplation it discloses, is calculated to reveal a mystical vision, and shows a

¹ प्रश्लेवित्यचरं प्राष्ट्रसमी पूर्णात्मने नमः ॥—Vaiyākaraņabhūşaņa, Kar. 72. and निष्मर्षे तु नहीं व स्तीटः।

पनादिनिधनं ब्रह्म शब्दतन्तं यदचरम् ।--- Vakyapadiya, Kar. 1.

peculiar pious tendency which seeks to explain all phenomena as emanating from something divine. The original conception of Sphota goes back to the most creative period of Indian thought, we mean the Vedic, when Vak was considered to be a manifestation of allpervading Brahman; Pranava regarded as the ultimate germ of all speech-sounds and Sabda viewed as an imperishable and potential factor in the creation of the world. Philosophy, so to speak, begins with concrete objects of thought and finally arrives at more and more nice abstraction. The grammarians, in the same way, started with the physical analysis of words and conceived sound as what clothes itself with letters. They proceeded still further and on 'minute examination of internal phenomena, grasped the remotest form of speech, riz., Sphota, that is manifested by sound, eternally existent, indivisible and really expressive of sense.

It is, however, difficult to ascertain as to when and with whom this theory had first originated. History does not definitely mention the name of any particular philosopher, so far as the authorship of this theory is concerned. All that we know about its history is that this theory received a strenuous support at the hands of grammarians, while almost every system of Hindu philosophy had attacked it mercilessly and rejected it as being absurd and inconsistent.

भागियहाः, नित्यः, चत्रमः, वाचवः।

We do not, however, definitely know of any grammarian who may be said to have formulated this doctrine, nor do we find any specific mention of Sphota in the aphorisms of grammar. We only repeat that our knowledge is not permitted to proceed beyond the limit that the theory of Sphota found much favour with the grammarians, who seem to have carried it to such an extent as to finally inter-weave Sphota with Brahmatattva, thus raising the artificial character of grammatical speculations to the dignity of theological discourses. But this is not the sufficient reason why we should take this theory as one of grammatical origin. On the other hand, it might be maintained with a greater degree of certainty, on the evidence afforded by some other popular theories of unknown origin, that the . Indian grammarians had already found the nucleus of the theory in existence in some form or other. They interpreted it consistently with their views and finally made it their own by giving it a distinctly grammatical stamp. What the grammarians have practically done with regard to this theory is that they popularised it with all earnestness and ultimately incorporated it into their systems as a tenet of fundamental importance. Similar is the original history of of the popular doctrines of Hindu The main doctrines philosophy. of the Sāmkhya school, for instance, seem to have been transmitted through generations as a common heritage of man and current as a

distinct line of thought long before they were systematised by Kapila or Paūcasikha. In this process of tracing the origin of old doctrines, we may be allowed to seek for some clue as to why the Vedas are emphatically declared by orthodox teachers as works not of human origin; and why it is authoritatively laid down that the Seers, who are mentioned by names in the Vedic hymns, are far from being the real authors.

To give a clear idea of Sphola, we find it necessary to start with Pranava. It has repeatedly been stated in the Vedic literature that the mystic syllable, i.e., Pranara, represents the primordial speech-sound wherefrom all forms of Pak are supposed to have been evolved. This sacred combination of three particles (घ. घ. म), which is still uttered with the utmost severence and regarded as a positive emblem of the supreme God, is said to have flashed forth into the heart of Brahman, while he was absorbed in deep meditation. Pranava unfolded itself in the form of Gayatri, which again gave birth to the three Vedas-this is how the cosmic world came into existence from so subtle an entity as Sabda. When we present this orthodox view in all its bareness and accordingly maintain that the entire world of Vāk has Pranava as its ultimate source, we should

म् स्वमुरेप भगवान् विदी गीतः समातनः। शिवाद्या पावि पर्वेना कत्तारिक्ष्यः न कारकाः—Mobābbāgavata Porēņam.

crave the indulgence of modern scholars who are likely to discard it as an unscientific and irrational theory. The Suta-Samhita 1 divides Pranava into two kinds, namely, Para and Apara. The former is the same as Brahman, while the latter is identified with Sabda. must be admitted at the very outset that while dealing with so mysterious a thing as Pranava and showing the orthodox belief in the potency of Sabda, we are really drifted to a land that lies far beyond the range of common experience. Pranava has two more aspects-external and internal—corresponding to those of Sphota. Vācaspati 2 in his gloss under the aphorism विशोका वा ज्योतिसती has attempted to show the internal aspect of Sphota. There is a lotus, it is said, having eight petals, that resides in the region between heart and abdomen; the three constituents of Pranava represent in the lotus, the solar, the lunar and the fiery regions respectively. Above it, as the Brahmavādins are only allowed to perceive, rests the Brahma-Nāda assuming the form of अर्धसाता. अर्धेसाता (capable of being perceived by the Yogins) which represents the Turiya or the fourth part of Pranava that resides in

[े] परः परतरं ब्रह्म ज्ञानानन्दादिलचणम्। प्रकर्षेण नवं यसात् परं ब्रह्म स्वभावतः॥ चपरः प्रणवः साचान्छव्दरूपः सुनिर्भेतः। प्रकर्षेण नवलस्य हेतुत्वात् प्रणवः स्वृतः॥

[ै] उदरीरसीर्मध्येऽधीसुखमण्टदलं पद्मं तद्रेचनप्राणायामेनीर सुखं कला तवालम्बने चित्तं धारयेदित्यादि।—Yoga Sütra—Vācaspati on the Bhāṣya. 1.36,

the heart of all beings, is called Nada-Sphota. It is emphatically laid down that the consummation of Yoga lies in the positive realisation of this absolute entity. Reference is made to this Nada in the Markandeva Purana where it is identified with Sakti or the supreme potency that exists from eternity and is not capable of being uttered by vocal organs. The history of the Hindu 'Trinity of gods' seems to have a close connection with the theory of · Pranava, for the three elements (ч. ч. н) constituting the Pranava are popularly believed to represent the three principal Hindu deities, viz., Brahman, Visnu and Siva, Now it is almost safe to assert without any contention that Sphota, taken as an imperishable unit of Vak (usually manifested by sound), which finally accounts for the evolution of speech. is analogous to Pranava; or, to take a still more orthodox view. it is the same as Pranava. Moreover, the expressions like भोंकार एव सर्वी वाक् and स हि सर्वशब्दार्थप्रकृति: which are, strictly speaking, applicable to Sphota also, serve to confirm our belief regarding the identity between Pranava and Sphota. The analogy is so striking that Nagesa does not hesitate to compare Sphota with the internal phase of Pranava,2

^घ ष्यधैमात्रा स्थिता नित्या यानुचार्या विश्रेषत:। 1.

च चाय' स्कीटः भान्तरप्रचन्द्रप एव |—Laghumañjüçä, p. 389.

In the Upanisads, however, we miss the term Sphota in its grammatical significance, but we frequently meet with the words Pranava and Aksara as expressive of Brahman. quently, the specific term Sphota, as understood by the grammarians, seems to have acquired a special meaning at a later period, when the grammatical speculations began to obtain more and more philosophical treatment and ultimately encroached upon the domain of pure metaphysics. The Seers of the Upanisads have already declared in unmistakable terms that Brahman is reducible to Pranava, or, Pranava is a living symbol of the Supreme Being. Accordingly, they have advocated the worship of Pranava 1 as a form of spiritual practice that leads to a state of perpetual bliss. So much sanctity and reverence were accorded to Pranava and its potency and spiritual character eulogised in such a manner that Proporo came to be regarded as Brahman itself. What a unique place Pranava occupied in the spiritual thought of India is evident from the numerous Vedic passages and from the traditions that have gathered round it from the Vedic times. In the Yoga system of Patañjali, Pranura is not only held as what positively denotes the Supreme Being," but repeated utterance of Propura is also suggested as an instrument for attaining the concentration of

र क्रिकेट एक समुद्रीय स्थापन क्रिकेट के क्रिकेट के क्रिकेट क्रिकेट के क्रिकेट के क्रिकेट के क्रिकेट के क्रिकेट

To the attent which implication with a fact

mind We may thus adduce abundant evidence in defence of the sacred character of Pranava All scriptural passages, specially the Vedic hymns, begin, as a rule, with this sacred syllable. The natural outcome of such speculations evalting Pranava to divinity accounts, if we are allowed to hold, for the evolution of the theory of Sabda-Brahman, so conspicuously dealt with by the reputed author of the Väkyapadiya. We have dilated at great length upon the unique spiritual aspect of Pranava, with a view to prepare the ground for the belief that Sphota, like Pranava, is ultimately convertible with Brahman.

The four forms of Val, denominated as Parā, Pasyanti, Madhyamā and Vailharī, may be viewed as indicating the different stages through which Sphota (Nada-Vindu) receives manifestation. Both Parā and Pasyanti are too subtle and delicate to be comprehended by sensorgans, the former residing in the Mulādhāra 2 in the shape of motionless Vindu, and the latter coming up to the naval region pushed by the internal wind. Of the four forms, it is Madhyamā that indicates Sphota. All these are, however, more or less mysterious. The popular form, viz., Vaikharī is what is uttered by the vocal organs and is capable of being heard by others

³ भनादि।नधन ब्रद्ध शब्दतस्तं यदसरम्—Vakyapadiya Kār 1 ब्रह्मोर्ट् गब्दनिमाण शब्दशक्तिनिवसनम् ।

It is further 1 held that $N\bar{a}da$ is simultaneously produced by Madhyamā and Vaikharī, but there is considerable difference between the two. We may have some cognition of Nada as produced by $Madhyam\bar{a}$, either at the time of counting $(Japa)^2$ or when ears are shut up. What is of vital importance is that this form of Sabda, as is manifested by $madhyam\bar{a}$ - $n\bar{a}da$ is what we precisely call Sphota: it symbolises Brahman and has eternal existence. Sphota is further said to be essentially one and without divisions. are, in short, the salient characteristics of Sphota. According to this theory, however, it is one and the same indivisible Sphota that is represented by Varna, Pada and Vākya, just as one and the same face 3 appears to be long and round when seen through stone, sword and looking-glass, or, as a piece of stone, taking reflection from red or blue flowers, seems to be either red or The difference between ka and aa^4 blue. is not practically due to the diversity of Sphota, but points to the peculiarities of sounds that serve to manifest Sphota. It is to prove both the unity and indivisibility of Sphota that it is often sky and consciousness compared to $_{
m the}$ which, though one and admits of no fractions, are said to have such attributive difference

as, घटाकाम, मठाकाम and Jira, Israra, respectively. Those who take पर and याच to be similarly indivisible units, express their views in the following way: Just as letters are devoid of parts, so no letters are comprehended in Padas as their constituent elements. Strictly speaking, it is not admissible to take words separately by splitting up a sentence. To those who advocate the divisibility of both Pada and Pākya, it is the last letter that indicates Sphota, each preceding letter being only necessary for a cognition of the intended sense.

In view of the difference between Madhyamā and Faikharī, we may divide sound into two kinds, namely, natural or everlasting (inexhaustible) and unnatural or momentary. It is the natural sound only, which is generated by Madhyamā, that suggests Sphoļa. The unnatural (aprākṛla-dhvani) sound is so called because it rises from Prākṛla-dhvani and undergoes an amount of modifications in the shape of long and short sound. Sphoļa being essentially one and without any modification is not at all effected by the quick utterance of sound, which practically refers to Vikṛla-dhvani. Considering

to be permanent, as an internal phenomenon, the grammarians have scanty regard to the logical view advocating the momentary character of Sabda. The existence of a permanent form of Sabda, as is represented by Sphota as such, proves a dubious point, so much so that it merited no support but adverse criticisms from all leading systems of Hindu philosophy. While they speak of production and destruction of Sabda, the Naiyāyika's seem to have Kārya-Sabda (as opposed to Sphota) in their view. They refused to take a more psychological view of Sabda apart from what appear to be a matterof-fact one. Consequently, they lost sight of those internal operations that are associated with the evolution of sound that goes to prove the existence of a permanent source of sound (Sphota). Another point which is none the less important in this connection is that Sphota alone,1 as is evident from its derivative meaning, is really associated with the expressiveness of sense.2 It is for the sake of convenience and popular practice that we assign meanings to Sabdas, but a closer examination of both the internal and external facts will show that Sphota is finally the significant element of speech.

As to the reason why Sphota is said to be one that does not admit of any division into

<

¹ सुटत्यघींऽसादिति स्पोट:।

² वाचकता स्पोटिकनिष्ठा।

parts, we should frankly state that the ultimate nature of Sphola, so far as it is brought to our comprehension by sound, letters and combination of words, seems to be undifferentiated. Physical structure of words only differs by virtue of Tiketa-dheani, but the very life of Salda, or. more clearly, the original Noda, is absolutely one and practically changeless. What we really mean is that, though the word Gauh differs from the word Ghotoh both in physical and psychological aspects, the ultimate germ giving rise to such sound is really one and the same. Sphota being one and permanent, Bhartrhari rightly observes that such difference, as is caused by sound, is not at all essential. The apparent difference t of words is thus due to that of sound whereby Sphota is indicated. Sphota is practically one; it is only the indicator of Sphota, viz. sound, that differs.

It is evident from what we have noticed above that it is difficult to form a definite idea of Sphola without a proper investigation into the internal phenomena connected with the evolution of sound. We assume the existence of such a mystic element beyond sound only through the instrumentality of external sound that serves to indicate Sphola. But we are never allowed to demonstrate its existence with a greater degree of vividness. There is no

¹ महीटे व्ययक्रप्यमिगतकत्वादिमाभान् ककारी वृद्ध क्रमीपाधिकी निदम्यवद्वारः :
— Manifles.

Jes

doubt that the internal operations, as referred to above, and connected with the materialisation of thought into sound, are what actually take place in the utterance of sound. It can hardly be denied that in the course of such translation something that lies dormant within (Avyakta) gets itself manifested by degrees while passing from the innermost part of the body to the vocal apparatus. The internal wind which plays so important a part in the transformation of consciousness into sound has been alluded to in connection with the psychological aspects of language (vide Linguistic Speculations of the Hindus).

In oppsition to the Naiyāyika standpoint, according to which Sabda is momentary and consequently liable to both production and destruction, Patañjali has strongly supported the permanent character of Sabda. It is curious to note that the attributives whereby he usually characterises Sabda, or more properly, Sphoṭa, are exactly those that are often ascribed to Brahman. There is convincing evidence that Patañjali, as a representative grammarian, had early realised the distinction between two kinds of Sabda, namely, created and permanent. It is explicitly with reference to Sphoṭa or permanent wordform that he used such expressions 2 as, Nitya,

¹ इष्ट ही शब्दात्सानी नित्य: कार्यय |—Mahābhāṣya.

[े] नित्येषु च श्रव्देषु कूटस्थैरविचालिभिषैर्णैर्भवितव्यमनपायीपजनविकारिभि:। —Mahābhāṣya, Vol. I, p. 18.

Avikārī and Kūtastha. In connection with the exposition of the class-theory of Sphota, as opposed to the individualistic one, he has given us some climpse into the salient features of Sphota. -Sabda is, maintains Patanjali, what is perceived by auditory organs, comprehended by intellect. manifested by sound and pertains to the sky. This definition, if we are allowed to style it as such. though concise and garbed in highly philosophical language, seems to be impregnated with deep significance, and purports to bring out the exact meaning of Sphota. Having regard to the importance of this definition, we think it worth while to take up the expressions of the Bhāsya one by one and explain them in the light of Kaivata and Nagesa. Percentible by the sense of hearing is used to indicate that the organ of hearing is only a fraction of ether 2 wherein Sabda or sound is directly perceived. Both Nyāya and Vaiseşika systems have taken Sabda to be a positive quality of ether. Sound 3 which has its origin in the vibration of ether is capable of being perceived only by the organs composed of the same element. Patanjali scems to have an accurate knowledge of the scientific fact in regard to the production of sound. The expression comprehended by intellect offers

[े] योतोपनसिर्मुहिनियाद्यः प्रयोगेषाभिञ्चलितः चाकाणदेगः थस्दः । —Vol. I. 1. 2. p. 18.

^{*} मध्यो अवरगुण: मीनगात्ता: ı--Prasastapāda Bhāsya.

an explanation as to how words, though consisting of letters that are liable to disappear as soon as they are uttered, are found competent to express the intended sense. The answer is the same as suggested by the Naiyāyikas.1 It is practically from the last letter that the cognition of the entire word is derived together with the impressions produced by the preceding letters. It is evidently an intellectual operation which enables us to retain the recollection of the entire structure of a word, even when we hear the last letter 'alone. Manifested by sound implies that Sphota, though permanent, is not always comprehensible, but comes under our cognition only when the vocal organs are engaged in operation Nāgeša states expressly for its manifestation. that the oneness of ether implies similar oneness in regard to Sabda or Sphota. We speak of priority and posteriority in respect of Sabda just in the same way, as we are apt to say ghatākāśa and mathākāśa having regard only to the difference of attributes. Of both ether and Sphota, the so-called difference is only due to their different attributes (upādhi). The singular number in Sabda is intended, as Nāgeša points out, to indicate both the unity and indivisibility (एकलमखण्डलञ्च) of Sphota.

It is quite evident from what he has said of Sphota that Patanjali recognised three prominent

[े] पूर्वपूर्वैध्वन्युत्पदिताभिव्यक्तिजनितसंस्कारपरम्परापरिपाकान्त्यवृद्धिनिगाच्च-द्रसर्घ: 1—Kaiyata.

characteristics of Sphota, viz., unity (Ekatva), indivisibility (Akhandatva) and eternality (Nityatva). In considering the question of time (as is required for the utterance of a word), he rightly observes that it is sound that seems to be either long or short, but what is manifested by sound, i.e., Sphota, is not at all effected by the variations of sound. He takes the instance of a drum and continues to say that sounds that are produced by beat of drum1 are not of equal velocity, some travelling 20 vds, and some 30 vds, and so on. The essential difference between sound and . Sphota. which has proved so difficult a problem to othersis clearly brought to light by Patanjali. He declares in unmistakable terms that Sphota represents what is Sabda proper, whereas sound is only a quality, that is to say, it serves only to manifest Sphota. The relation is, therefore, one of the indicator and the indicated. He further elucidates the point that Sabda has two aspectssound and Sphota; it is sound alone that is usually perceived and appears to be either long for short as the case may be, while Sphota remains entirely unchanged and is not readily perceptible by sense-organs.

The foregoing observations will serve to show that Sphota, though strictly one and indivisible, is also capable of being classified as internal and

¹ एवं तर्हि स्कोट शदा धानि शब्दगुब,। कथम् १ भेवीधातवत्। मेरीमाहत्व जायिदि शतिपदानि गच्छति। स्कोटलावानैव धानिज्ञता इदि:। धानि स्कोटय शब्दाना धानिस्तु खलु-लुद्यते।—Mahābbaşya, Vol I, p 181,

ecternal. So far as the innate expressiveness of sense is concerned, it is the internal form of Sphota (that lies within and is only manifested by sound) that is really significant. The external form of Sphota, as is comprehended by our hearing organs, has no such intimate relation with the meaning. In all our linguistic enquiries we engage ourselves more or less to the investigation of the external aspects of a language, but we take very little notice of the internal phenomenon which forms the very life of a language. We assign the meaning to sound, as we fail to proceed further so as to grasp the ultimate reservoir of sound that is really associated with the significance. It requires only a moment's consideration to realise that sounds or vocalised thoughts are not only produced by the operation of vocal organs, but have their origin in certain ethereal region of the body, which does not vary, though the modulations of voice are always different from one another. The grammarians have thus sought to explain the existence of an internal cause of sound. The external form of Sphota is, again, of two kinds, denoting class and individual.

As a great exponent of the Mahābhāsya, Bhartrhari has dwelt at length on the question of *Sphota*. Bhartrhari begins with the enuncia-

¹ स्कोटो हिनिध:। वाह्य: श्राध्यत्तर्य। ततान्तरस्य मुख्यं वाचकत्वम। Kunjikā on the Manjūṣā, p. 287. श्राध्यत्तरस्कोटो वाचक इति सिह्नम्।——Manjūṣā.

tion of two kinds of Sabda, as the indicator and the indicated, the former representing the ultimate germ of speech-sound, and the latter being what is really expressed by Sabda.

In view of the popular belief regarding both plurality and order (krama) of Sabda, he makes his position clear by pointing out that no question of order, such as priority and posteriority, and that of plurality can logically be raised in relation to Sphota, which is essentially one and eternal. It is sound, he maintains, that passes through successive stages in course of articulation and appears to be either long or short in proportion to the exertion required for the utterance of a word. It is practically due to the varying modulations of voice, as caused by the vocal apparatus, that 'ka'-sound seems to be different from 'kha'-sound and so on. But Sphota, it must be remembered, remains unaffected. A parallel example 2 is then sought to explain the relation between sound and Sphota. It is a fact of common experience that the sun, though practically a fixed body, seems to be quivering and moving when it is seen through the agitated water of a pond. Just as the agitation of water is reflected on the sun, so (inspite of the oneness and undifferentiating character of

¹ बातुवादानमञ्जेषु मन्दी मन्दिविदः। एको निमित्तं मन्दानामपरीऽर्थे प्रयुक्तते।—Vākyapadiya, p. 20.

² प्रतिविसं यथान्यत स्थितं तोयक्रियावयात् । तत् प्रश्तिमवान्वेति स धर्मः; स्कौटनाद्यो: —VAkyapadiya, 1, 49.

Sphota) order and difference pertaining to sound are falsely attributed to Sphota. The dual aspects of Sabda, as referred to above, imply that Sabda has the potency of expressing itself as well as its meaning that is associated with it by inseparable connection. This fact is further corroborated by the epistemological evidence. His main thesis may be briefly stated in the following words: Sabda, like light, is supposed to possess a double function, as grāhaka and grāhya. A light is luminous by itself and serves to illuminate others. Similarly, a Sabda is first comprehended and then becomes expressive of meaning.

Then, he proceeds to show how Sabda is evolved. Reference² is first made to the view (as that of the Naiyāyikas) that does not take Pada to be anything but a combination of letters, and similarly does not recognise a sentence as distinct from Padas and letters. The grammarians, however, entertain quite an opposite view, because they maintain Vākya-Sphota to be an indivisible unit that knows neither division nor order. It is nothing but an artificial device of grammar to analyse a sentence into parts (Padas) and those parts again into stems and suffixes.

² गाह्यतं ग्राहवालं च हे शक्ती तेजसी यथा। तथैव सर्वशब्दानासीते पृथगवस्थिते।—Vakyapadiya, I, 55.

² तहणे यतिरिक्तेन पदमन्यन्नविद्यते। वाक्यं वर्णपदाभ्यां च व्यतिरिक्तं न किञ्चन।—Vākyapadīya, I, 72.

There are, as the grammarian maintains, two different aspects of words, namely, Kārya or popular form and Nitya or the permanent form of speech. The former is generally produced by the exercise of vocal apparatus and serves to give a reflection of internal consciousness, the latter is what represents the ultimate germ of speech. Sphota is identified with this latter aspect of speech.

The three views regarding the cognition of sound and Sphota may be thus briefly summarised 1:-(i) Sound when produced is heard by the auditory organs and becomes the positive instrument whereby Sphota is comprehended. (ii) Having assumed the material form through the medium of sound, Sphota is capable of being heard. (iii) Sound acts upon the organs concerned and serves to manifest Sphota. Bhartrhari lends his support to the last one. Sound is the outer garment of Sphota. Though incomprehensible and inconceivable by itself, Sphota reveals its existence through the medium of sound. Sound and Sphota are intimately related to each other. As the scientists have found out atoms or electrons as the final factor of creation, so the grammarians started with sound and ultimately reached the subtle element of speech to which the term Sphota

[े] यदा जशकुसुसद्भात्पन्नसमित स्कटिकादीनां यह यं तथा ध्वनिद्धात्त्रयन्न एव स्कीटसादिक्सायेनीयनस्पते द्वि केशाचिन्त्रतम्, etc.—Popyarāja under the Vākyapadiya, Kār. 1, 82,

was significantly assigned. As to how sound and Sphota, related to each other as the indicative and the indicated, are to be comprehended, Bhartrhari refers to four different views on the subject. Some say that Sphota is recognised as identical with sound, just like a piece of marble red in contact with a Javā-flower; looking some holding sound (though not cognisable by itself) to be indicative of Sphota; some maintain that the exact nature of Sphota being too subtle to be determined, it is sound only that comes under comprehension; some, again, freely admit is really manifested but it is Sphota indistinct and unintelligble on account of the distance wherefrom it is evolved. No doubt, Bhartrhari has here recorded the views of his predecessors and contemporary grammarians in order to do full justice to so important a But we can hardly afford to pass over these views without taking notice of the unique advancement of grammatical speculations, as is clearly borne out by these references.

Referring to the intellectual process involved in the comprehension of Sabda, Bhartrhari ¹ says that the cognition of Sabda practically follows from the last sound together with the impressions made by the preceding ones.

The immediate consequence of holding Sphota to be one and indivisible was a grave

¹ नादैराहितबीजायामन्येन ध्वनिना सह। आहत्तिपरिपानायां नुडौ शब्दोऽवधार्यते।—Vākyapadiya, Kār. 1, 85.

one, as it threatened to strike at the fundamental principle of grammar by making all process of analysing sentence and words purely artificial. The science of grammar is primarily based upon the principle of analysis. Now, to justify the procedure of grammarians, it must he said on the contrary that they had no other alternative than to isolate words from a composite sentence, in order to make the sense of words intelligible to others. It is simply due to our inability. Bhartrhari strongly argues. that we cannot comprehend a sentence without taking it to be a combination of words and words as consisting of no parts (Prakrti and Pratyaya). An examination of facts shows that the grammatical method of analysing sentence and words into their component parts, however artificial from the standpoint of Sphota, is calculated to afford the only scientific means, so far as the knowledge of meaning is concerned.2

The doctrine of Spho(a, as expounded by the grammarians, is not a creation of fancy and the result of idle philosophising; it is rather based on the facts that speak for themselves. A moment's notice is only required to realise the existence of some inexhaustible potency

¹ व्यवक्षाराय सम्बन्धे प्राक्षार्वप्रक्रिया यत: i—Vākyapadīya, 2. 231. Popyarāja—एवं च निरवयदेष्यि वर्षेद्रवास्त्रेषु सामाविभागो वर्षेविभाग: पद्विभागय जान्यनिको सिथेति भाव: .—Uoder Kār. 93.

 1.4.

lying inside the body, which is conceived to be at work at every time of utterance. Sound that we hear is not produced by the operation of vocal organs only, but has its origin elsewhere. However subjected to adverse criticisms by the opponents, the dectrine of Sphota, with all its mysticisms, will continue to appeal to speculators on the psychology of language, as embodying the most accurate explanation with regard to the origin of $V\bar{a}k$. That the principle of grammatical analysis is more or less fanciful is evident from the fact that systems of grammar have their different nomenclatures and technical terms, though they have practically kept the same object in view and treated of the same subject.

This analytical method, though at best artificial, is supposed to have much utility, as it practically enables us to have an insight into the actual state of things. Starting with such unreal process as the division of sentences and words, with the obvious object of facilitating the study of words, the grammarians finally succeeded in obtaining a truer perspective while dealing with the problem of *Sphota*. Bhartphari² rightly observes that proper attention and close enquiry are needed to arrive at the final goal, running through a passage so artificial and bewildering.

¹ शास्त्रेषु प्रक्रियाभेदरैविद्यैवीपवर्ण्येते ।—Vākyapadīya, 2. 235.

² यथैव दर्भनै: पूर्वैद्र्गत् सन्तमसेऽपि वा। अन्ययाक्तत्य विषयमन्यथैवाध्यवस्यति।
— Vākyapadīya, 1. 90.

As it is imperfect observation that makes a rope look like a serpent, and such delusion ceases to exist the moment it is cautiously examined, so the grammarians first treated of a sentence as having many parts and those parts as containing various letters. But their mode of vision is materially changed on a closer examination of facts and they finally describe Sphota as an imperishable and indivisible unit without any reservation. The discourse on Sphota reached its culminating point when Sphota was regarded to be as gréat as Brahman itself. The doctrine of grammar has thus ultimately identified itself with the same transcendental reality which has always proved to be the be-all and end-all of metaphysical speculations.

The later grammarians, specially Sesakṛṣṇa, Nāgesa, Bhaṭtoji and Koṇdabhaṭṭa, have dealt with the problem of Sphoṭa more clearly and elaborately but all following the line of Paṭaṇjali and Bharṭṛhari. The arguments advanced by Seṣakṛṣṇa in defence of Sphoṭa are briefly as follows: An indivisible unit as Sphoṭa should be accepted on the ground that the sense usually denoted by a word can neither be derived from an individual letter (as it would render all other letters entirely meaningless), nor from a combination of letters, for letters being liable to destruction as soon as they

¹ न प्रश्लेकं न मिलिला न चैकस्यतिगोषराः। धर्यस्य वाचका वर्षाः किंतु स्कोटः स च दिथा।—Bphojatattvanırūpaya.

are uttered, it would be practically impossible to have a congregate of such transient letters. It is not even sufficient to say that they are cognisable by the same act of memory, because, if it were so, the undesirable consequence will be the identity between such groups of words as, Nadī, Dīna and Rasa, Sara (there being difference of order only), as they consist of the same letters and are comprehended by the same faculty of retention. The grammarians have, therefore, proceeded a step further and recognised the existence of Sphota, which is suggested by sound, eternal and not at all divisible into parts.

We can compare this view with what Patañjali has said with regard to order in letters. As two letters, Patañjali argues, cannot be simultaneously pronounced on account of their transient character, it is useless to raise the question of priority and posteriority in connection with letters. This order is to be understood as an intellectual one. Seşa continues to say that the cognition of Sphota follows from the last letter together with the impressions made by the preceding letters.

The later grammarians have to a certain extent shown prolixity in enunciating as many

न वर्णानां पौर्वापर्यमस्ति । उचिरतप्रध्वं सिलाच वर्णानाम् ।

² वुडिनिषयमेन शब्दानां पौर्नापर्धम्।

पूर्वपूर्वानुभूजन्यभावनासचिविऽित्तमे । चेतिस स्मुरित स्मोटः ।

as eight different forms of Sphota, such as, Varna-Sphota, Pada-Sphota, Vakya-Sphota, Akhanda-Pada-Sphota. Akhanda-Vakya-Sphota Varna-Jāti-Sphota. Pada-Jāti-Sphota. Vākua-Jati-Sphota. The author of the Sabda-Kaustuhha has clearly dealt with all these classifications. It must be, however, remembered that these varieties, with the single exception of Pakua-Sphota, are more or less unreal and not accepted by all grammarians. Reference has already been made to two kinds of Vakua-Sphota. viz.. class and individual. An attempt is now made to see how far these standpoints (Jati-Sphota and Vyakti-Sphota) are in concordance with the Mahabhāsva. Sabdatva which pertains to all Sabdas is regarded to be a class, and consequently, भ्रद्धास्ति by its very nature 1 deserves to be treated as eternal. Bhartrhari has thrown some sidelight this point. The word Sphota in Swan: स्कोटमालं निर्द्धियते has led some to favour the view Sphota is virtually a class that is suggested by individual words or sounds, and that ग्रन्दव्यक्ति receives the designation of dhvani by suggesting Jati-Sphota. Some, again, hold 2 on the other hand, that Vyakti-Sphota (as opposed to Jāti-Sphota) is one and imperishable. As to the apparent plurality of Vyakti, they maintain that the interval or intervention caused

[ं] भादित्यवत् सुः—तद् यया एक भादित्योऽनेकाधिकस्यस्त्री युगपद्देश-पृथक्केषपलायते ।—M. B. 1, p 18.

by time and words, which tends to prove the diversity of one and the same Vyakti as a, is only due to the variation of sounds whereby Sphota is suggested. According to this point of view, it should be borne in mind, the a-sound in da is not distinct from that in nda. This view is, however, open to objections and is finally set aside by Patañjali. Those who like Patañjali advocate Jāti-Sphoṭa¹ advance their arguments to repudiate both unity and eternality of Vyakti-Sphota on the ground that a seems to have more than one form, according as it is called udātta, anudātta, svarita and pluta. It is not even reasonable to suggest that the same a which is first pronounced as $ud\bar{a}tta$ is next taken to be Anudatta and so on, for, if it were so, Sphota would cease to be eternal on account of its assuming diverse forms. Thus, $J\bar{a}ti$ -sphota is finally accepted as what gives the correct solution of the problem.2

Having thus discussed the salient characteristics of *Sphoṭa* from all possible standpoints, we now proceed to see how *Sphoṭa-vāda*, which is popularly attributed to the grammarians, was received by different schools of Hindu philosophy. However carefully conceived and ingeniously nourished by the grammarians, the

theory of Sphota seems to have a strange fate. because it failed to have any favourable treatment at the hands of reputed philosophers. What is still more regrettable is that it was rather subjected to stern and vigorous criticisms. Though it embodies, so to speak, the crowning achievement of all grammatical speculations, the theory of Sphola unfortunately met with nothing but disapproval on all sides. The only school of Indian thought which appears to have lent support to the assumption of an invisible speech-unit as Sphola, is, if we are allowed to hold, the Yoga system of Patanjali. It is practically on the evidence of such aphorisms, as Yoga Sutras 1, 31 and 3, 17 and the expositions of Vyasa thereon, and partly in consoquence of the supposed identity between the authors of the Mahabhasya and the Yoga Sutras. that the existence of Sphota is said to have been recognised and supported by the author of the Yoga Sūtra. Truth to tell, there is no clear mention of Sphola as such in the aphorisms of Yoga system; it is only in the comments of Vyāsa and the gloss of Vācaspati that some light has been thrown on the question of Sphota.

It is too well known a fact that all objects of thought, with the exception of *Primordial matter* and Soul, are declared to be सार्थ। or

मक्रतिपद्ययोरन्यत सर्वे कार्धैर्मितः।

products by the teachers of the Samkhya school. Having taken a rather perverted view against the orthodox interpretations, they have rejected the fundamental tenets of the Mīmāmsakas, viz., eternality of sound,1 eternality of the Vedas and eternality of the relation between sound and meanings. It requires no other evidence, hold the Sāmkhyāites, but ordinary perception and inference to prove that Sabda is produced by the agency of vocal organs and has only momentary existence. The Samkhya Sutra (5.57) distinctly rejects Sphota as practically incomprehensible. The reason of their refutation is a very simple one. As no other element apart from letters comes to our notice in the cognition of a word, it is absolutely useless to assume the existence of Sphota (which passes our vision and comprehension) as distinct from letters.2 letters are, on the contrary, directly perceived, it is more reasonable to take them to be expressive of the sense. If, again, letters are supposed to be meaningless by themselves, we are allowed to doubt the so-called expressiveness of Sphola. Now, the point at issue is when letters are found to be really expressive of sense, the assumption of Sphota in addition to letters becomes a superfluity which the followers of the Samkhya school are not prepared to accept.

¹ न शब्दनियलं कार्यतामगीते: 18—Amkhya Sütra, 5. 68.

मतीयप्रतीतिभा न फोटायाक: गव्द: 1—Samkhya Satra, 5. 57. महोतिवैषांगामप्रतीत: फोटम्य वर्णातिरिक्तस्य, तमात्र फोट: गव्द: बिंतु वर्णा एव। —Supahya-Vetti.

There is another argument which also goes against the indivisible character of Sphota. As meanings are liable to changes according to the different arrangement of letters (as in $Nad\bar{i}$ and $D\bar{i}na$) and as sounds are diversified in their character and have manifold significance, we cannot reasonably take Sphota to be one and eternal. The conclusion to which this argument leads is that Sphota, being inconceivable, is far from being Sabda proper. It is letters alone, no matter if they are perishable, that constitute words in the real sense of the term.

No comment is, however, necessary to show that the Samkhvaites, who profess to be rationalistic, have taken notice of only the outward aspect of speech and have totally neglected the more important side of the question, viz., psychological or internal aspect. Their main difficulty is that they ascribe significance to so transient a thing as letters, but do not strive further to find out the permanent source of Sabda, as is manifested by sound. As to non-perception of Sphota, it must be remembered that the Sphotavadins also were not slow to emphasise the difficulty that lies in the way of having a perceptional knowledge of Sphota. They made no secret as to the necessity of a thorough concentration of mind in order to realise the existence of Sphota. It requires a good deal of mystical power, or some amount of spiritual vision, as is given rise to by the awakening of Praina-netra, to grasp the cit-aspect (Sphota) of the Supreme Being.

Moreover, Sphota is not capable of being perceived by ordinary sense-organs: it is only suggested or manifested by sound.

Regarding the existence of Sphota (as distinct from letters), the views of the Mīmāmsakas, as ably represented by the author of the Ślokavārttika, are far from being reconcilable with those of the grammarians. Having taken a purely physical view of Sabda, the Mīmāmsakas, like Sankara, turned to the old theory of the revered teacher Upavarsa¹ and accordingly identified Sabda with letters. To assume something as Sphota apart from letters, is, as they hold, opposed to all cognition and experience. Letters are actually perceived in a word, as, for instance, the word gauh does not appear to have any other element excepting the three constituent letters—ga, au and visarga. It is curious to note that while so much stress is laid on the popular experience, the importance of the logical aspect of Sabda has altogether been ignored, so as to weaken the ground on which the grammarians sought to build the edifice of Sphotavāda. When Sabda, as a combination of letters, is practically seen to be expressive. of the sense and as no other factor is found to be in operation in the comprehension of the meaning, it is nothing but superfluous to assume the existence of Sphota, as distinct from letters.

¹ वर्णा एव तु शब्द इति भगवानुपवर्षः ।—V. S., I. 8. 28.

The grammarins, it must be remembered, have declared Sphota to be virtually distinct from letters and further held Sphota to be the only significant element of speech.' The Mimimsakas maintain that letters have no parts and that there is no such collection in the cognition of words apart from that of the component letters, In assigning meaning to words, the Mimamsakas had to face one difficult problem. The question presented itself in the following form :-Are all letters individually significant by themselves, or, is it an aggregation of them whereby the meaning is expressed? The untenable character of the first view is clearly evident. since the competency of each individual letter to signify the intended sense is contrary to our experience. As regards the second view, it is not possible to have an aggregation or a simultaneous combination of letters, simply for the reason of minute intervals in the utterance of sounds. The Mīmāmsakas make their way out of the difficulty by saying that the significance of words depends upon the convention or popular usage. As the comprehension of the meaning directly follows from the letters that constitute a word, and as nothing else is required for the purpose, it is only logical, they hold, to take letters as what express the sense. Kumarila shows further how by accepting

¹ वाचकता स्कीटैननिष्ठा।

^{*} Wilcaic;-Bloka.varttika.

Sphota as an entity, we are liable to make a number of unnecessary assumptions, such as, the éxistence of Sphota, distinctness of Sphota from letters and its indivisibility. It guite clear from what we have said that the arguments advanced by the Mimāmsakas against Sphotavāda are, generally speaking, ducible to two only, namely, the existence of Sphota apart from letters (i) involves a negation facts (হছেলি) and (ii) is an . of :perceptible unwarranted assumption of something that is invisible or imperceptible (স্বহুত্ত্বন্দ্ৰনা). ..The concluding verse 1 of the author reveals, however, the reason why he could not lend support to the theory of Sphota. As a matter of fact, the assumption of Sphota, which makes all divisions of a sentence and words merely artificial, is found to be entirely inconsistent with the main tenets of the Mīmāmsā system, for it renders ūha, prayāja, etc. (which pertain to letters, words and sentences) absolutely conventional. It is, therefore, to retain the genuine character of the Vedic texts that Kumārila made such a vigorous attempt to refute the existence of Sphota.

The Vedāntins have fully acknowledged the eternality of Sabda. They have, on the authority of scriptural texts, even gone to the extent of investing Sabda with the potency of producing the entire world. While dealing with Sabda

¹ वर्णीतिरिक्त: प्रतिषिध्यमान: पर्देषु मन्दं फलमाद्धाति।
कार्याणि वाक्यावयवाश्रयाणि सत्यानि कर्त्तुं क्षत एष यवः॥—Slokavārttika. Kār. 137.

(Logos) and its 'world-producing power,' Sankara has conveniently devoted considerable space under the Vedanta-Sutra 1.3.28 to find out the exact nature of Sahda. With his characteristic manner of presenting arguments, he first . points out the incongruities that become almost unavoidable, if letters having both production. and destruction, were to be regarded as Sabda proper. Subsequently he continues to acknowledge Snhota as what represents the permanent form of Sabda. The way in which Sankara has at first advanced arguments in defence of the existence of Sphota, exposing the untenable features of adva, leads one to believe, though temporarily, that he entertained no antagonistic view against the grammatical interpretation of Sphotavada. This impression is, however, of a short duration, because next we find Sankara 1 more favourably examining the view of Upavarsa almost in the same way as the Mimāmsakas. As to the question of production and destruction of letters, he argues that it really implies the re-cognition (प्रत्यभिद्यान) of the same letter. What is meant is that different letters are not produced and uttered each time, but, as a matter of fact, the same sound, say ka (as in kala and kāla) is heard. It should be, however, noticed here that the Naiyayikas are not prepared to take the above as an instance of re-cognition, but explain the

Vedāntā Sūtra, Šankara Bhāşya under the aphorism, 1.328.

118 PHILOSOPHY OFS ANSKRIT GRAMMAR

sameness of ka-sounds as due to their belonging to the same class (কৰে). To sum up the two views: According to the Mimāmsakas and the same ka-sound is Vedāntins, the again and again, whereas the Naiyāyikas do not maintain the non-differentiation of the individuals and consequently take all ka-sounds as belonging to the same class. This re-cognition, continues Sankara, does not follow from the knowledge of a class; it is individual letters that are comprehended each time. Again, we accustomed to hold the form though it consists of three distinct letters, as one word. How is it, then, possible to have such a cognition of oneness when its component parts are far from being one? Having attributed the diversified character of one and the same letter to the difference of sound, he proceeds to say that sometimes many things form the subject of one intellection,1 as many trees, for instance, are denoted by one word 'forest' (Vana). At last Sankara sums up the arguments on both sides, viz., Parņavāda and Sphoţavāda, and after a minute examination of facts arrives at the conclusion that the view maintained by the Varnavādins 2 is simpler and appeals more to reason and experience, while that of the Sphotavādins is vitiated by prolixity and involves far-fetched

¹ अनेकस्याध्येकवुद्धिविषयत्वम्।

² वर्षवादिनी लघीयसी कल्पना, स्फीटवादिनस्तु दृष्ट्रानिरदृष्टकल्पना च वर्णांचेमे फ्रमीण ग्रह्ममाणा: स्फोटं व्यञ्जयन्तीति स स्फोटोऽपं व्यनक्तीति गरीयसी कल्पना स्वात्—Sankara-Bhäsys.

speculations. To hold, he observes, letters, as they are comprehended one after another, to be indicative of *Sphota*, which is said to signify the intended sense, is to take a superfluous view of the whole problem.

According to the Nyāya-Vaiseşika point of view, sound is a quality of ether, comprehended by the organ of hearing, and has only a momentary existence. It is of two kinds-(1) sound as represented by letters like ka, etc.; (2) sound as produced by beat of drum and blowing of conches and the like. The former, viz., वर्ष-जनजन्द, is alone significant and is generally used as a medium for communicating the ideas. Praśastapāda, the well-known commentator on the Vaisesika-Sūtras, has attempted to show how words are produced. The view of this commentator regarding the origin of sound_is almost the same as is to be found in treatises on Siksūs. A desire is first felt within, the author says, by the conjunction of the mind with the soul, for the utterance of sound (in order to give expression to the thoughts rising in the mind); then efforts are made which bring about a movement in the region of internal sir. Thus moved by causes from within, the internal air proceeds upwards till it comes in contact with the vocal apparatus. This conjunction which is followed by vibrations in ether gives rise to sound that is destroyed as soon as it is uttered. A word is, therefore, Kārya, as opposed to Nitya. The Naiyāyikas as well as the Vaisesikas have thus taken a

non-eternal view of Sabda differing from the grammarians who assume a permanent form of Sabda, as is represented by Sphota.

In his annotation on the Bhāṣya, Śrīdhara 1 has made an attempt to show the absence of logic in the grammatical conception of Sphota. He first raises the question whether meaning is expressed by a sentence or by Sphota. If a word is nothing but a collection of letters, holds the Sphotavādins, and a sentence not at all distinct from its component parts, then there would be no 'comprehension of the meaning whatso-For neither individual letter is competent to convey the entire meaning (as it would render other letters simply redundant), nor is a combination practically possible, as all letters cannot be pronounced simultaneously. The author meets this objection by holding, for argument's sake, that letters are eternal and not transitory, as in that case such an aggregate would not be incomprehensible. But this argument cannot stand for obvious reasons. It is further argued by the opponent that letters are perceived one after another and then impressions are produced in the mind. This is also untenable. For, if there is order in recollections, as shown above, there would be no co-existence of sounds to form an aggregation. As the comprehension of the meaning is otherwise impossible, the Sphotavādins have been led to acknowledge

Nyāya-kandalī (Śrīdhara) - Sk., p. 267.

the existence of Sphota, as what expresses the meaning. But such an assumption has no justification to a rationalist philosopher like Sridhara. The following arguments, among others, are sought by Sridhara to refute the existence of Sphota: Sphota is never directly perceived, but falsely assumed by the grammarians; the denotation lies within the word and not with an imperceptible entity as Sphota. To assume Sphota, as distinct from letters, is as fallacious as to conceive a 'flower in the sky.' 2

Before bringing this topic to a close, we have one word more. Considering what has been said about the doctrine of Sphota by different schools of Indian philosophy, it is sufficiently clear that the main contention raised against Sphota is based upon the fact that the assumption of Sphota is contrary to all perception and involves far-fetched speculations. Having taken their stand on the facts established by direct perception, the opponents of Sphotavada seem to have carried the popular view in their fayour. But it would be a positive mistake to suppose that what the Sphotavadins tried to establish is nothing but fanciful. It cannot be, however, denied that the Sphotavadins made no secret as to the imperceptibility of Sphota by ordinary means. Morcover, it is repeatedly pointed out

Nyāya-Kandalī (Śrīdbara), piz., Sk. series, गुक्यम्ये संस्कारनिद्यवम्
 -pp. 269 270. तद्वे वर्षेश्य एव संस्कारहारियार्थप्रव्यसभावादयुका स्कोटकच्या।

गगनकुसुसस्त्रेव स्कोटकल्पना न युक्ताः

that the realisation of Sphota requires a good deal of spiritual meditation as well as perfect concentration of mind. As it is not logically correct to take anything to be unreal, simply because it is not directly perceived, we do not find sufficient reason to deny the very existence of Sphota which, though imperceptible, is said to be manifested by sound. Sphota, to speak the truth, bears comparison with the soul, as both of them come under our cognition through the instrumentality of inference, the former being indicated by sound and the latter by volition, effort, pleasure, pain, etc. As to the other side of the contention, we should say that the upholders of Sphotavāda minutely examined all external aspects of words before they could grasp so subtle an entity as Sphota by unfolding the psychological phenomena underlying the origin of sound.

To summarise what we have said about Sphoța: Sphoța is the same as Sabda-Brahman or Brahman revealed in the form of $V\bar{a}k$. Sphoța represents the internal aspect of Praṇava; it is eternal and cannot be divided into parts (akhaṇ da) and expressiveness or $V\bar{a}cakat\bar{a}$ lies with Sphoța and not with Padas, isolated from the $akhaṇ da-v\bar{a}kya$ —the indivisible unit of speech. That there is no essential difference between Sphoța and Praṇava has been clearly stated by the ancient seers. $N\bar{a}da^{1}$ or primordial sound is said to have first

प्ताहितात्मनी ब्रह्मन् ब्रह्मणः परमेष्ठिनः।
ह्याकाशादमूद्रादो हत्तिरीघादिभाव्यते॥—Laghumañjūs्ā, p. 389.

originated in the spatial region of the heart (hrdyākāša) of Brahman when he was deeply absorbed in meditation. This subtle form of sound is capable of being perceived by shutting the auditory passage of the ears Out of Nada arose Omhara, the self-radiant, creative factor, which is regarded as the positive symbol of the supreme Being Viewed from the standpoint of Yoga, Sphota, Pranava and Pratibha are almost the same. The internal aspect of Vah. as is represented by Para and Pasyanti, is inseparable from cit-sakti, the fountain source of all cognitions Pranava or Pratibha, as we may call it, has its permanent sent in the heart of all sentient beings, its fourth part is what is known as ardhamatiā or Sphota 1 Further, it is held that Sphota which serves to manifest Vāk is heard by the supreme Soul (Paramatman). when the sense-organs lie mactive in a state of sleep 2 Both Sabda and Artha are in reality the manifestation of one and the same Soul. 3 it is only to the grammarian that one gets the designation of Vacaka and the other as Vacya Pratibha or intelligence is shaped by Sabda and Artha The inseparable connection in which Sabda stands to Artha also points to their origination from the same source, ie,

¹ सोऽय प्राविभावस्य इत्या प्रवश्तरीयायोऽधमावादपो नादो वा स्कोट इ.स्वचृति ।—Laghumañje‡a p 890

Buddhi. Durga makes this point clear when he continues to say that Buddhi (Pratibhā) residing in the heart of all in the form of knowledge (abhidhāna) and knowable (abhidheya) gets materialised into Sabda and Artha respectively.1 Again, it is said that what is denoted by all sentences is nothing but Pratibhā (Pratibhā eva vākyārthah). According to Bhartrhari, it is mahāsattā or mahāsāmānya (ultimate reality) that is really denoted by all Sabdas. It is one and without any division (vibhāga) and order (krama). To him who has not attained that spiritual vision which enables one to visualise the all-pervading reality, this mahā-sattā falsely appears to be manifold, as the objects possessing it are diversified in their external outlook. Sphota is identified with this mahā-sattā. Sphoṭa is the ultimate germ of all word-forms (Sa hi sarvaśabdārthaprakṛtiḥ); words may differ from one another, so far as external aspect is concerned, but the internal or intellectual one (Sphota) remains the same. The Vaiyākaraņas used to look upon Śabda as the audible manifestation of Brahman and advocated constant meditation on Sabda or Sabda-Brahman as a regular form of Yoga that ultimately leads to the emancipation of the Soul (param Brahmādhigamyate).

The standpoint wherefrom the grammarians have viewed the ultimate germ of all

¹ गरीरे छिभिधानाभिधेयछ्पा बुद्धिर्छं दयान्तर्गताकागप्रतिष्ठिता.......
Nirulta, p. 47.

speech-sounds is materially different from those of Saakara, Kumārila, Śrīdhara and others. To the grammarians, Sphoţa is sacred and divine, so much so that it is finally identified with Brahman. Notwithstanding all adverse criticisms that have been heaped upon the assumption of an intellectual phenomenon as Sphoţa, the theory of Sphoṭa, will continue to survive as embodying the most reasonable and scientific interpretation about the origin of sound.

CHAPTER V

SENTENCE AND PARTS OF SPEECH

Sentence—its decomposition—Parts of Speech—Prakṛti and Pratyaya—Upasarga and Nipāta.

In accordance with the strict interpretation of the doctrine of Sphota, as we have observed, the analytical method, though adopted by the grammarians as a cardinal principle, is liable to be regarded as purely artificial. But there is no denying the fact that the grammarians had no other alternative than to take up this process of dissolving sentences and words into their constituent elements, as the only means of getting into the meaning of words. Grammar is not a creation of fancy, nor an artificial combination of rules. Grammar is rather popular science; the principles on which the structure of grammatical generalisations stand are more or less drawn from popular experiences. That a special rule becomes applicable in preference to a general one,1 Patañjali observes, is a fact that is neither enjoined by a divine authority nor sanctioned by the authors

[े] नैवेश्वर श्राजापयित नापि धर्मस्चकाराः पठन्यपवादैकत्सर्गा बाध्यनामिति । किं तिर्हे ? लौकिकोऽयं दृष्टान्तः । लोकिऽपि सत्यपि संभवे वाधनं भवति । Mahābhāṣya under the rule Pāṇ., 1. 1. 47.

of the religious texts, but it is a popular example which is perfectly consistent with our daily experience Both Kātyāyana¹ and Patañjali have repeatedly drawn our attention to the most important point that the study of grammar has for its object the discrimination of correct words. Though corrupt forms are found to be as expressive of sense as their corresponding correct words, it has been stated with all possible emphasis and earnestness that the use of correct words in conformity with the rules of grammar is alone attended with religious felicity.².

Though there are eight different varieties of Sphota, as we have already pointed out, it is the Vālya-Sphota alone that is held to be real, the rest being more or less artificial. Trom the standpoint of Sphota, Vālya is not divisible into parts and is the really significant element of speech. Bhartrhari has the following: Just as an unreal process like that of analysing words into stems and suffixes is also resorted to for the knowledge of unintelligent people, so a Vālya

is broken-up into *Padas* by the grammarians with a view to get into the meaning of words. This *Apoddhāra* or decomposition is the first and foremost business of grammar.

There is much divergence of views regarding the precise nature of a $\nabla \bar{a}kya$. Bhartrhari has stated as many as eight different views of the ancient grammarians in regard to the constitution of a $V\bar{a}kya$. These views are summarised as follows:—A $V\bar{a}kya$ is (1) a verbal form; (2) a collection of words; (3) a class; (4) one and individual; (5) an order; (6) an intellectual assimilation; (7) the first Pada; (8) all Padas differing from one another but having mutual expectancy. Of these only 3, 4 and 6, i.e., class, one and indivisible and intellectual assimilation of meanings are accepted as proper definition of a $\nabla \bar{a} k y a$ by those who maintain the indivisibility of a Vākya. The rest, on the other hand, are supposed to form the accurate definition of Vākya from the standpoint of those who uphold the dissolvability of a Vākya (Padavādins). Again, the definitions of $V\bar{a}kya$, as either order or collection of Padas, are compatible with the view of the Abhihitānvayavādins and those as, verbal form, the first Pada, Padas in their different aspects having mutual expectancy, are consistent with the view of the

¹ षाखातगब्द: सङ्चातो जाति: सङ्घातवर्तिनी। एकोऽनवयव: गब्द: क्रामो बुद्धानुसंहित:। पदमादां पृथक्सदेपदं साक्वाङ्क्षास्यि। वाक्यं प्रति मितिभेन्ना बहुधा न्यायवादिनाम्।—Vākyapadīya, 2. 1.-2.

Anvitābhidhānavādins. A' Vākya 1 is also defined as a combination of words having mutual proximity, expectancy and compatibility. These three characteristics form the mediate causes with regard to the comprehension of the meaning from a sentence. (1) Expectancy-An aggregate of words that are not mutually expectant fails to give a connected idea; as, for instance, no consistent meaning is cognisable from such an unconnected group of words, as गौरख: प्रची इस्ती and घटकर्मलमानयनं कति: and so on. (2) Proximity implies that words that are uttered at intervals cannot have any inter-relation amongst them so as to constitute a significant sentence. (3) Competency means that we cannot construct a sentence out of words the meanings of which are mutually incompatible (as in বল্পিনা মিস্থারি). Jagadīśa 2 is not, however, prepared to take these three as direct causes, so far as Sābda-bodha or verbal cognition is concerned, because they would tend to place Sabdabodha under the category of inference. The Naiyayikas have, therefore, taken them to be Sahakārī (conditions). as opposed to direct causes. Expectancy refers

to the physical side (মহুনিছা), whereas competency is to be understood as pertaining to the logical side of Śabda (মুখনিয়া). We generally find that verbal expectancy is satisfied by words alone.1 But what is logically correct is that expectancy is also connected with the meaning and not with the form alone, and consequently the expression पदंसाकाइम् means Pada that is indicative of the meaning having mutual expectancy with that of another. It is sufficiently clear from what Patanjali has regarding the interpretation of vyapekṣā that expectancy really pertains to meanings that are reciprocally expectant. Similarly, competency, as a Sahakāri-kārana, is also to be understood as related to the meaning. As the cognition of import (तात्पर्ध) alone cannot produce Sābdabodha independently of expectancy, etc., Gangeśa recognises the necessity of their help for obtaining the so-called verbal cognition. Proximity,2 strictly speaking, is not a cause, it may be so with an unintelligent man, as it tends to help his quick understanding, but in the case of an intelligent man, proximity is not unavoidably necessary for his cognition. Import is also recognised to be the meaning of a sentence. Gangesa 3 states clearly that

ग्राब्दी छानाडा गब्देनैव प्रंति ।

³ श्रामि: प्रान्द्वीधे न कारणम् । मन्द्रधाविलम्बे न वोधे कारणम्, श्रमन्दस्य तु श्रामनाभावेऽपि वोधो भवतीत्वर्थः।—Manjūṣā, Kuŭjikā Ţikā.

[ं] तात्पर्याधीनं शन्द्रणमाण्यम् ।—Tattvacintāmaņi, p. 316. (Sabda-kbaņķa.)

the cognition of import is a necessary condition in the matter of verbal knowledge. sentence is uttered by the speaker with the explicit desire of expressing this sense "-is the way in which Tatparya is generally obtained. But Nāgeša differs from the Naiyāyikas and does not take import as an unavoidable condition for the comprehension of बाब्बाई, inasmuch as the meaning of a sentence is also cognisable even without any reference to the particular import of the speaker. The cognition of import is essential in the case of those words which have more than one meaning, as इति, सैन्यव, etc. Nagesa, however, maintains on the authority of the Mahabhasya that it is the knowledge of context (Prakarana), propriety and the like that helps us in determining the particular import of a word when it happens to have more than one meaning.

The author of the Varttika 2 defines Vakua as a verbal form having conjunction with either an indeclinable, a Kāraka, or an adverb, i.e., a verbal form constitutes a sentence in combination with the above adjuncts. Some say,3 as Patanjali observes, that a verbal form with its adjuncts is sufficient to constitute a sentence. It is further suggested that a verbal form alone 4

^{*} एकसिङ वाकाम।--Ibid,

is competent to constitute a $\nabla \bar{a}kya$. definitions have made it perfectly clear that a verbal form is the main constituent of a sentence. If we take a verbal form as what constitutes sentence, the meaning of a Vākya will necessarily be $Kriy\bar{a}$ or action $(Kriy\bar{a}\ v\bar{a}ky\bar{a}rthah)$. A sentence, in the grammatical sense of the be framed without term, cannot Jagadīśa does not, however, lend his support to this view. He maintains, on the contrary, that a $V\bar{a}kya$ is a combination of mutually does not insist on the expectant words and presence of a verbal form as the first and foremost condition of a Vākya. A verbal form does not, therefore, occupy an important place Jagadīśa's conception of Vākya. contention is based on the fact that when a combination of words like क्रतो भवान, which does not contain any verbal form, is also found to be clearly expressive of the sense, it is not strictly correct to hold that a Vākya without a verb is practically incomprehensible. The grammarians hold the opposite view. According to them, a sentence is not at all possible without a verb. What the soul is to the body, so is the verb to the sentence. Jagadīśa has also rejected Amar Simha's definition of $V\bar{a}kya$, 2— V $\bar{a}kya$ is a combination of words ending in sup and tin'-since it is over-lapping as well as incomplete

[े] क्रियारहितं न वाकामसीत्यादिकासु प्राचां प्रवादी निर्मुक्तिकत्वादश्रहेय:।
——\$abdaśaktiprakāśikā, Kār. 13

or open to the fallacies of Ativuanti and Avuanti. It is to be particularly noticed that with the Naivāvikas the form ghatam is nothing short of a Vākua, because it is expressive of the sense घटवित्तक्रमेलम्. The way in which Jagadisa has defined Samasa makes it clear that the form $n\bar{\imath}lam$ is as good as a $V\bar{a}kya$ and the form nīlotvalam is, consequently, a Mahā-vākva. The grammarians cannot do away with the verb, so far as the cognition of a sentence is concerned. As no complete and consistent sense is comprehensible without a verb, the grammarians, as a rule, understand such forms as asti and bhanati in those cases where verbal forms are not actually present. To the grammarians, the expression अती भवान necessarily implies such a verbal form as agacchati without which neither is the sense complete, nor the proper Kāraka (Apādāna) determinable.

It is also a difficult problem to decide what is actually denoted by a $V\bar{a}kya$. There is a great difference of views regarding the meaning of a $V\bar{a}kya$. Some hold that the meaning of a sentence is the same as what is denoted by its component parts; others maintain that a sentence is expressive of the sense that is virtually different from those that are expressed by its constituents, either individually or collectively. Kumārila has thoroughly discussed these two contradictory views in the $V\bar{a}ky\bar{a}dhlkarana$ of his Śloka-Vārttika. The doctrine of the eternality of both Sabda and

its relation to meaning, though so seriously supported by the Mīmāmsakas in the face of much adverse opposition, was not considered to be sufficient to prove the authoritativeness of the Vedas. The validity of the Vedic injunctions, which have come down to us the form of sentences, was questioned by the opponents on the ground that the meaning of a sentence is distinct from those of its constituents. The Mīmāmsakas meet this argument by holding that a sentence is practically a combination of consistent words and denotes exactly what is expressed by each word, i. e., the meaning of a sentence represents only a sum-total of the meanings of its constituent parts. are, so to speak, two views, as held by the two distinct schools of Mimāmsā systems, viz., Bhatta and Guru, in regard to the meaning of a $V\bar{a}kya$: (1) Abhihitānvayavāda 1—It means, as is implied by the very expression, that Anvaya or correlation between the meanings,2 as expressed by words through their respective conventions, is what constitutes the significance of a Vākya. The special import (विलच्यो बोध:) that is usually brought about by the particular connection of meanings and which does not practically follow from any constituent, is, according to this view,

तात्पर्यार्थोऽपि वाकार्धे इत्यभिहितान्वयवादिनां सतम्। वाच्य एव वाकार्थ इत्यन्तितानिधानवादिन: I—Kāvyaprakāśa, p. 27.

गान्दबोध चैकपदार्वेऽपरपदार्थन्य मन्त्रत्यः संमर्शमर्वादया भासते। -Vyutpattivāda.

also supposed to be implied by the Padas themselves. What is exactly meant is that the signi ficance of a Vākya is the same as is denoted by Padas making up a sentence; and (2) Anvitābhidhanavada-According to this view, Padas are first related to one another in a sentence before they can express the consistent meanings, that is to sav, the usual meaning is obtained from the particular connection of Padas. The grammarians not only tried to prove the indivisibility of a Pākya, but also attributed the same property to the meaning of a Vākya. Just as there are no parts in a Vākya, says Bhartrhari,1 so there is ono division, so far as the signification of a Vākya is concerned. Some hold that the sense expressed by a Vakya is grant. To those who. like the Sphotavādins, maintain the indivisibility of a Vākya, the meaning expressed by a Vākya is nothing but Pratibhā or intuition. It has already been pointed out that the internal consciousness (caitanya) reveals itself through the medium of Sabda and gets the designation of abhidheya. Bhartrhari has identified Pratibhā with the mahā-sattā that pervades the whole world of cognition. Though one and indivisible, Bhartrhari continues, it appears to be manifold owing to the diversified character

[ै] यस्य न विभागोऽसि छुतीऽर्थस्य भविष्यति !—Vākyapadīya. इति वाकार्पस्यापि निर्विभागतं प्रतिपादयति !—Ponyarāja

विच्छेदग्रहणेऽयांनां प्रतिभान्तेव जायते। वाकार्थं इति तामाहु:।

⁻Vākya., 13

and the $V\bar{a}kyav\bar{a}dins$ hold respectively Padas and $V\bar{a}kya$, as expressive of the sense. The $Padav\bar{a}dins$, in opposition to the other, take Padas to be the only real elements of speech, and consider an indivisible unit like $V\bar{a}kya$ as practically incomprehensible. This view does not carry much weight to the grammarians. The falsity of Padas (they are made by the grammarians), is clearly brought to light by Punyaraja on the strength of an extract from the Mahābhāṣya, where the term $Padak\bar{u}ra$ (one who makes Padas) has been used as a designation of the grammarian.

All words, as a rule, consist of two parts—
Prakṛti and Pratyaya. Prakṛti is, again, divided into two classes, namely, Nāman and Dhātu.
The analysis of words into their bases and suffixes is grammatically known as Saṃskāra; it forms, so to speak, the cardinal principle of Sanskrit grammar. We propose to show the nature of Prakṛti and Pratyaya before proceeding to consider the characteristics of Padas that go to constitute a sentence.

Whatever may be the intrinsic value of Sphotavāda from a psychological stand-point, it cannot be denied that the assumption of an indivisible unit as Sphota is materially inconsistent with the fundamental principles of grammar.

[े] न खत्रवेम पदकारा पत्रवर्ताा. पदकारिनांम समयमनुबर्धम् । यदावस्यं पदं कर्तेयम् ।—Under the role पापितः कर्ता, Pan., 6. 1. 207,

Making all words disassociated from a sentence simply unreal and meaningless and giving a stamp of falsity to the whole grammatical method of analysing words into their stems and suffixes, the doctrine of *Sphota* is calculated to have shaken the very basis of grammatical speculations. There may be reasons for accepting this doctrine inspite of its rigidity and apparent disagreement with the established method of grammar, but we must frankly admit that the principle of analysis, as adopted by the grammarians, is the only scientific means for getting into the meaning of words.

Turning to the question of analysis of words, it must be stated at the outset that all words or, more properly, Padas, consist of two parts, viz., Prakṛti and Pratyaya, though such decomposition is not always possible in the case of the so-called underivable Prātipadikas generally coming under the uṇādi class. Yāska too has referred to two classes of words, namely, words of which both accents and formative elements are popularly known 2 and words whereof these elements are not directly comprehensible 3 by the usual method of grammatical analysis. The analytical process involved in such grammatical device forms the most important

¹ उपाय: जिन्नमाणानां वालानामपलालना:। श्रसत्ये वर्त्यांनि स्थिता तत: सत्यं समीहते॥—Vākyapadīya, 2. 240.

^{*} समर्यसरमंस्तार: !-Nirukta, p. 154.

⁵ भगमर्वस्तरमंस्तार: |--Ibid.

function of grammar and is almost the same as adopted by the etymologists (Nairuktas) for the determination of the meaning of words. This analysis which is popularly known as $Samsk\bar{a}ra$ is the criterion whereby the grammarians distinguished the words of pure Sanskrit origin from corrupt forms (Apabhramsas).

Prakrti, as the very term implies, is the ultimate germ of speech to which formative elements (Pratuana) are added for the evolution of regular forms of words. An attempt to find out two distinct elements (Prakrti and Pratuava) in a word that does not essentially admit of any division, on account of its unity and indivisibility. is more or less fanciful, though not altogether useless, since it helps the understanding of meanings. Bhartrhari defines Prakrti as that form of a word which, for the purpose of its own signification being qualified by that of the other, stands in need of certain forms immedistely following it. Of these two mutually expectant forms, the former is called Prakrti and the latter as Pratyaya, Pratyaya, as Umāpati2 observes, is said to be, on the other hand, that form of a word the meaning of which cannot be shown to have any relation with that of the other without being conditioned by the significance of the word to which it is added.

 $^{^2}$ सेतरार्थानविकश्चित्रसार्थसान्यवीधने । श्रीरसमर्थः सैपप्रस्दः, प्रत्ययोऽयं चतर्षिधः ॥-1bu

Jagadīśa has, however, rejected both these definitions as insufficient. He takes both Prakrti¹ and Pratyaya to be significant by themselves (Sārthaka), but does not fail to notice their mutual dependence. The relation in which Prakrti stands to Pratyaya is one of interdependence, for neither of them is individually competent to express its own meaning, without having invariable association with the other. On the ground of such mutual dependence, it is contended that these elements taken individually have no particular signification of their own. As a matter of fact, if they had meanings, when taken individually, each of them might have been used independently of the other.2 But it is far from being the case. No meaning is, strictly speaking, conveyed by the word gau when it is not associated with or followed by Pratyaya. Moreover, Prakṛti³ and Pratyaya being connected with each other by inseparable relation, it is not grammatically correct to use independently. Grammar does not sanction independent use of either Prakṛti Pratyaya. This is the train of arguments whereby Patanjali seeks to establish that a word has no parts (such as Prakṛti and Pratyaya), because

¹ पट-पाचकाद्या: प्रक्षतय:, सुप्तिङाद्या: प्रत्यया: स्वीपस्थाप्यार्थस्य बीधं नियमत: थन्दान्तरं सहक्तत्य जनयन्ति ।—Sabdasakti under Kārikā, 6

³ नित्यसन्बन्धावितावर्थी प्रकृति: प्रत्यय इति।—Mahābhāṣya under the rule Pāṇ., 1. 2. 45.

meaning is conveyed by the word as an indivisible whole 1 How, then, are we justified in discussing the meaning of Prakrti and Pratyaya, as two distinct elements constituting a word? Here Patañiali takes recourse to the logical method of agreement and difference2 and clearly indicates how both Prakrti and Pratyaya, as is evidenced by such forms as vrksah and vrksau, may be shewn to have separate meanings of their own. The base that remains almost unchanged denotes a thing having stem, brauches, leaves, fruits, etc., and the suffixes signifying respectively singularity and duality. In a group of homogeneous words, as in the above examples, we find that the stem remains more or less constant but suffixes are only variant, whereas in pacati and gacchati the suffix is the same, it is Prakrti that is only different. Sometimes the change of Pratyaya brings about a change in the meaning of words (as in harih and harah) derived from the same origin.

Bhartrhari has tried to show that the discrimination of Padas and the comprehension of their exact meanings are, strictly speaking, far from being real. There is of course no fixed principle so as to precisely determine the

meaning of Prakṛti and Pratyaya. We cannot 1 definitely say, 'this much is denoted by Prakṛti, and this is exactly the meaning of Pratyaya. In grammar,2 as a matter of fact, we meet with instances where the basic element does not sometimes actually exist, but its meaning usually denoted by Pratyaya (as in iyan) and sometimes Prakrti is found, on the contrary, to be expressive of the sense of Pratyaya (as in ahan). He continues further that in an instance like pacanti what is denoted (কার্নুল) by the two different suffixes (vikarana—भ्रप् and নিভ) is generally expressed by one suffix (that is, तिप only) in the case of স্থানি (where śap is necessarily dropped). As to the method followed by the grammarians, Bhartrhari rightly observes that there is rather an absence of fixed rules regarding the process of determining the significance of both Prakṛti and Pratyaya,4 because systems of grammar have no agreement amongst themselves so far as the meaning of Prakṛti and Pratyaya is concerned. The systems

¹ ननु यदा शन्दा नित्यसम्बन्धा विवेसेन ज्ञातशक्तय: खार्थस्य प्रतीतौ तदा कथमेतदवगतमयं प्रकालयधींऽयं प्रत्यवार्थ द्रत्याशङ्कप्रापीङ्वारस्यान्वयव्यतिरिकौ निमित्तमिति।—Punyarāja under the Vākya., kār., 2. 167.

of grammar, though they practically deal with the same subject, are so variant from one another in respect of nomenclatures and the method of treatment that what are shown to be the meaning of Pratyaya in one system are taken to be the significance of Prakrti in the other. Notwithstanding such examples, as shown above, we should carefully bear in mind that the meaning of a word is really expressed by both Prakrti and Pratyaya in their natural but grammatical combination.

Though different views are held as to the significance of Nipātas, there is, however, no divergence regarding the expressiveness of Prairie and Pratuaga The two well-known divisions of Prakrti, namely, Dhatu and Pratipadika, have their meanings fixed by popular usages. Patanjalı prefers to designate Prakrti as nimitta in relation to Pratuava which is called nimitti What he intends to imply is that the meanings of Prahrti (as are to be found in the Dhatu-pātha and Prūtipadika-pātha) are more or less known, whereas those of Pratyaya are not exhaustively found Though he unconditionally admits that the whole word (as an aggregate of both Prakrti and Pratyaya) is alone capable of denoting the sense, Patanjali shows clearly how by the application of the logical method of agreement and difference, Prakrti and Pratyaya, as in हच: and हची, may be distinctly specified as having their separate meanings. The terms Prakets and Pratyaya are treated in grammar as two technical words—the shortest name for a class.1 The rule प्रत्यय:, Pān. 3. 1. 1, is explained by Patanjali as an adhikāra-sūtra denoting a Samjnā. He contends further that by virtue of adhikāra this samjñā may apply to Prakṛti, Upapada, and Upādhi and consequently they may have all grammatical operations usually pertaining to Pratyaya.2 There arises, therefore, the necessity of making certain restrictions. Moreover, he explains the word Pratyaya in two ways,3 as what either expresses the meaning, or is comprehended. He then proceeds to show how to distinguish Prakṛti from Pratyaya; 4 the former, it is said, is entirely comprehensible by the enumeration of roots and Prātipadikas, while the latter is not capable of being known exhaustively. There is another way also to bring out this distinction. Pratyaya is said to be more important (superior) than Prakrti,5 its superiority or importance being due to the fact that Pratyaya as a class is nowhere enumerated (as significant forms of speech) except in grammar. We should not fail to notice

¹ संज्ञा च नाम यतो न खघीय:।—M. B., Vol. II, p. 3.

[े] अधिकारिणेयं प्रत्ययसंज्ञा। सा प्रक्षत्युपपदीपाधीनामपि प्राप्नोति। Mahābhāṣya under the rule Pāṇ., 3. 1. 1.

⁵ प्रेषाने कार्यसंप्रत्ययाद्या सिद्धम्—Vār. 3. विद्य प्रधाने प्रत्यय: I—Ibid.

here that Pratyayas like sup and tin are not mentioned separately with their respective meanings, whereas roots and Pratipadikas (as two divisions of Prakrts) are to he found respectively in the Dhatupatha and in the enunciation of Pratipadikas This view which assigns greater importance to Pratyaya is based on a Paribhāsā.1 The above explanation of Pratyaya may serve the purpose of excluding Prakets, Upapada and Upādhi from the category of Pratyaya, but what still demands solution is to differentiate modification and augment (विकासमाः) from Pratyaya 2 as such. A careful study of the formation of words makes it sufficiently clear that modifications and augments (as they appertain to both Praketi and Pratyaya) seem to have all the qualifications of Pratyaya, though they are not practically treated as such by the grammarians. The modification and augment might be included in the same class with Pratuana, inasmuch as both of them are wanting in original enunciation prior to their treatment in grammar. It will not suffice to say, as Kaivata' explicitly remarks, that

¹ प्रधानाप्रधानयो प्रधाने कार्दमग्रह्मयः। किच प्रधान प्रख्यः।—M B under the rule Pan , 3 1 1

^{*} विकासगमीयु च परविचानातु-- Var 4 M B, Vol II, p 2 प्रस्तव परो भवतीत्यचाते न च विकासगमा परे संभवन्ति।—Ibid

³ य पर स प्रत्यय न च विकारागमा परे। तेन तेथा प्रत्ययसञ्चान भविष्यतीस्वेव न व्याप्येयम्। न हि परत्वनिमित्ता प्रत्ययस्त्रा, चिप तु प्रत्ययसंज्ञानिमित्त परत्वम । तथा च परत्वाभावेऽपि बहुजकचां प्रत्ययभुष्ता भवति । तथादिव व्यान्याग्रते— प्रयोजनाभावात विकारागमानां प्रत्ययसङ्गा न भवति । तथा हि परविभाग प्रत्यय सञ्जापना (-Kaiyata on the Bhasya under Pan , 3 I 1.

Pratyaya has its position fixed, viz., it comes invariably after Prakṛti, while there is no such fixity of position with regard to modifications and augments. But what is grammatically sanctioned is that प्रत्यसंज्ञा does not really depend upon the posteriority of position, because bahuc and akac, inspite of their irregular positions, are also included within the category of Pratyaya. Again, forms like nibha, samkāśa, etc., though used after Prātipadikas in the sense of similarity, are not grammatically regarded as Pratyaya.1 It must be noted here that the suffixes like bahuc and akac form irregular instances, so far as the position of Pratyaya is concerned. The difference is then shown by a reference to the construction of the Sūtras. The Sūtras enjoining modifications and augments are generally found to have षष्ठी as what determines them, whereas Pratyaya is enjoined by the Sūtras containing पञ्चती. There is another criterion to distinguish Pratyaya from both modifications and augments. Pratyaya, as the very term implies, is significant, though the so-called खार्थिकप्रत्यय like ka forms an exception, viz., it has apparently no meaning apart from that of Prakrti to which it is added. The modifications and augments, on the other hand, have got no signification at all.

It is quite evident that a word, taken as an indivisible whole, is what expresses the intended sense. This is the conclusion Patanjali has

¹ तिङ्येख निभायन्य: स वा प्रत्यय उचाते ।—Sabdasakti, Kār. 10.

arrived at. If this be the general principle that regulates the use of words, how can we logically say 'this much is the meaning of Prakrti,' and 'this is the meaning of Pratuaya?' Patañiali meets this position by referring to the method of agreement and difference whereby the distinct meanings of both Prakrti and Pratuava are generally comprehended.

The question does not come to an end here. It is further argued that instead of assigning meanings to both Prakrti and Pratuava, 'it is hetter to hold either Praketi or Pratugua alone as expressive of both the meanings: or Prakrti may be supposed to be the only significant form and Pratugua only indicative (duotaka). This is true, Pataniali observes, so far as Sāmānya-Sabda, viz., word denoting a class, is concerned. It must be remembered that without reference to either context or special sense, Sāmānva-Sabda, as a rule, cannot express the particular meaning. But when we say vrksah, what we find is that a particular sense is naturally implied. We are, therefore, bound to admit that these are not Sāmānva-Sabda. Now what deserves our attention is that in a word both Prakṛti and Pratyaya have their respective meanings consistently related to each

गत्र अत एतदथं प्रकल्पचीऽयं प्रत्यचार्य इति १ न पनः प्रकृतिरिवोभावची त्रयात प्रत्य एव वा |- Mahabhāşya under the rule Pan , 1. 2 45

सिंहं लन्यग्यतिरेकाभ्याम्।-- Vār. 9. Mahabhāsya, Vol. I, p. 279.

other so as to express one indivisible sense. The base, as Patañjali has shown, and the suffix in the word $v_r k_s ah$ means respectively (1) a material body containing roots, stem, branches, leaves, etc., and (2) oneness or singularity. Elsewhere it is said that oneness as well as karmatva, etc., are the meanings of the case-endings.¹

There is another difficulty with regard to the meaning of Prakṛti and Pratyaya. As systems of grammar have no agreement so far as the meaning of Prakṛti and Pratyaya is concerned, one finds it difficult to determine the meaning of them with a degree of certainty. What is said to be the meaning of a Pratyaya in one system of grammar is taken to be the meaning of Prakṛti in the other.2 This is why the Sphotavādins have rejected both Padas and Padarthas as unreal. There is nothing, Bhartrhari argues, as Pada fixed by its very form,3 and no meaning follows from a Pada, but from a sentence. A Pada, in its grammatical sense, has no real existence apart from the sentence of which it forms an integral part. How, then, are we to justify the principle of grammar which treats of such unreal things as Padas? Bhartrhari continues that Sastras

¹ एकत्वादयो विभक्त्यर्था:। सुपां कर्मादयोऽप्यर्था:।—M. B., Vol.II, p. 58.

³ न हि किञ्चित् पदं नाम रूपेण नियतं क्वचित्।—Vākyapadiya.

(grammar) by their diversified methods and procedures only serve to exhibit Avidua or false impressions,1 It must be, however, admitted that the method adopted by the grammarians in the analysis of words, whether real or unreal from the standpoint of Sphotavada, is not only scientifically perfect but immensely helpful to the beginner. Though dealing with words that are unreal and transient, the science of grammar, as we have already seen, does not fail to serve a very useful purpose. Just as one is liable to pass through many unreal phenomena in which he is born, before he reaches the final goal or reality, so the grammarian starts with a false appearance as Padas and is ultimately qualified to have a glance into the mystical element of Vak, we mean Sabda-Brahman, by unveiling the screen of ignorance.2 Upasargas and Nipatas or Prepositions and

Particles are, as we have seen, enumerated by Yāska³ in the list of Parts of Speech. Their linguistic aspects, with reference to their possibility of having been once used as regular forms of words, have been discussed in the Linguistic Speculations of the Hindus. Now we propose to deal with the grammatical side of the question. We do not find any difficulty in ascertaining the meaning of Nāmans and Dhātus, but it

गास्तिव प्रक्रियाभिदैरविद्यैबीपवर्भाते ।—Ibid

[&]quot; चसत्ये वर्याम स्थिता ततः सर्थं सभीहते ।—Vākya 2 239.

^{*} चलारि पदजातानि नामार्याते चीपसर्गनिपाताय।-Nirukta, I. 1.

is more or less a matter of doubt whether Upasargas and Nipātas have the power of expressing the intended meaning in the strict sense of the term. To determine the precise significance of these two classes of parts of speech is a difficult problem over which the grammarians and the Naiyāyikas seem to have been conflicting.

The definition of Upasarga, as given by Sākatāyana, purports to show that Upasargas have 'no meanings when they are dissociated from verbal forms.2 What follows necessarily from this statement is that they are not significant by themselves. The view of such grammarian of revered memory seems to have received approval of Yāska and later grammarians. The indicativeness (dyōtakatva) of Upasargas, as opposed to their direct expressiveness (vācakatva); is clearly pointed out by Yāska³ when he lays down in agreement with the grammarians 4 that Upasargas are far from being expressive of sense, but serve only to qualify or specialise the meaning of Dhātus. Dhātus are said to be of various meanings. The meaning which we generally assign to Upasargas is really denoted by the root itself. The additional sense (as that of perfection in an instance like

^{&#}x27; चतुर्विधपदेष्वच हिविधस्यार्थनिष्धः। क्रियते संग्रयीत्पत्ती नीपसर्ग-निपातयो:॥—Quoted by Durga.

[ै] न निर्वेद्धा उपसर्गा श्रर्थान्निराष्ट्ररिति शाकटावन:।—Nirukta, 1. 3., p. 57.

⁴ क्रियानिशेषक उपसर्ग:—Mahābhāşya, Vol. I, p. 256.

prabhavati) which is usually assigned to Upasargas is said to be expressed by Dhatus themselves. Gargya, on the other hand, emphatically supports the opposite view and clearly shows how various meanings are often expressed by Upasargas.1 It is no wonder that Gargya, who is said to have assigned meanings to each individual letter that enters into the constitution of a word, would differ from the majority of the grammarians in making all Upasargas express. ive of particular meanings. Whatever he the real value of Gargya's arguments, we cannot help admitting that his standpoint, though finally rejected by the grammarians, is not absolutely unreasonable. The way in which bhavati differs from prabhavati and tisthati from pratisthate (stoppage of motion and motion being respectively meant) in their respective meanings is calculated to show how roots like bhū and sthū in their pure and compounded forms are distinctly different in respect of meanings. The method of agreement and difference, when applied to such cases, makes it sufficiently clear that the additional sense, as is obtained from the use of roots combined with Upasarga, is due to the presence of Upasarga, that is to say, the special meaning is directly implied by Upasargas. We meet with many instances of verbal forms to which the addition of Upasargas materially changes the meaning

स्थावना: पदाया अवसीति गार्ग्य: 1-Nirakta, 1 8, p 57.

of roots—a fact which may be adduced to confirm the position taken by Gārgya. This is the reason which led Gārgya and his followers to maintain the expressiveness of *Upasargas*.

Those who, on the contrary, advocate the indicativeness, argue in the following strain: Upasargas have no specific meanings of their own apart from those of roots to which they are added: the additional or special signification that is apparently given rise to by the presence of an Upasarga is, strictly speaking, denoted by the root itself. Upasar gas serve only as a symbol of indication. That Upasargas are merely suggestive and not expressive of sense illustrated by the expression उपाखेते हरिहरी. Upāsanā or worship cannot be taken as the sense of Upasarga (upa), for in that case there could be no passive voice in उपाछित, as the root ās is intransitive. Neither is it possible to consider a combination of anu and $bh\bar{u}$ root, because it is not so mentioned in the Dhātupātha; nor the process of reduplication and the addition of augment (a and \bar{a}) affect Upasargas at all. The verbal roots are said to have various meanings. Those that are given in the Dhātupātha are hot at all exhaustive, but in most of the cases they are simply indicatory. For the verbal form bhabati in 'यागात् खर्गी अवति' is found to imply production instead of denoting simply becoming. Thus, the meaning usually expressed by खोपसर्गधातु, such anubhavati, parābhavati, abhibhavati, etc., are all

capable of being denoted by the simple root $bh\bar{u}$. What useful purpose is, then, served by Upasargas, if they have nothing to signify? Their function, so to speak, is to manifest or give prominence to the latent meanings of roots (which are not ordinarily expressed when the root is simply used). The analogy of a lamp. as shown by Durga, is a well-conceived one, for it illustrates the part played by Upasargas in the comprehension of meanings. Just as certain properties (as height, length, etc.) belonging to a thing are rendered visible through the instrumentality of a lamp, and those properties, as a matter of fact, appertain to the thing itself and not to the lamp, even so the addition of Upasargas serves to bring out the meaning of roots. The particular sense, usually assigned to Upasargas, is essentially what is expressed by the root itself.

Pataujali² explains the Upasarga as what particularises the action; the verbal form pacati, for instance, implies the action, viz., cooking, and when pra is prefixed to it, it serves only to qualify the action, adding the special sense of perfection (प्रस्पे:) to the meaning of the root. He did not, however, fail to notice that in instances like tisthati and pratisthate the addition of an Upasarga materially changes the meaning

00

¹ यथा प्रदीपसंथींगे द्रव्यस्य गुपविभेषोऽभिव्यन्धमानो द्रश्याय्य एव भवति न प्रदीपाय्यः (----Nırukta, p. 59.

श्री सियाविश्यक उपसर्ग: | Mab3bhasyo under Pap., 1,3 1. पचतीति किया सम्यति तो प्री विश्वनिष्ट ।

of the root. What follows from this is that it is the presence of pra that causes such changes in the meaning (e.g., 'stoppage of motion' and 'motion'). The above is an instance in which there is apparent opposition between the meanings of Dhātu and Upasarga. The Kārikā, as quoted by Puņyarāja,1 clearly brings out the characteristics of Upasargas, as will be evident from the substance given below: Sometimes the so-called denotation of Upasargas, as in the above instance, seems to be in opposition with the meaning of Dhātus; some follow the meaning of the root without any disagreement, and some only serve to specialise the signification of the root. Having recourse to the theory that a verbal root admits of more than one meaning,2 Patañjali lays down clearly that Upasargas have no direct expressiveness (like Nāmans and Dhātus) and that their supposed meanings, as perfection, proximity etc., are, strictly speaking, derivable the root. Accordingly, tisthati alone (without having connection with any Upasarga) is capable of denoting both motion as well as stoppage of motion.3

Bhartrhari is not satisfied with the remark that *Upaṣargas* are only suggestive, but

[्]रे धालधे वाधते कश्चित् कश्चित्तमनुवर्तते । तमेव विश्विनध्यन्य उपसर्गगति-स्त्रिधा॥

² वह्वर्था श्रिप धातवी भवन्ति।—M. B. under Pāṇ., 1. 3. 1.

[ै] तिष्ठतिरेव व्रजिक्रियासाइ, तिष्ठतिरेव गतिक्रियाया निवृत्तिम् ।—Mahābhāṣya under Pāṇ., 1. 3. 1.

has discussed all possible standpoints wherefrom Upasargas might be viewed. It is not sufficient, he holds,1 to take Upasargas only as suggestive, because some of them, as pra in pratisthate, seems to be quite good in expressing the sense. Again, when the special meaning is practically expressed by the root and Upasarga in their combination,2 it is not unlikely that Upasargas also have their contribution, so far as the expression of the intended sense is concerned. Thus, we find that Upasargas may be viewed from three different standpoints, namely, vācaka or expressive, dyotaka or suggestive and sahakārī or auxiliary; these three correspond to the three classes, as shown in the Kārikā referred to above.

So far as grammatical operations are concerned, Dhātus are generally found to be categorically distinct from Upasargus. In the Dhātupātha mention is only made of roots and not of Upasargas. Again, the process of reduplication (dvirvacana) and the augment at (adagama) are functions that pertain to a Dhātu alone. Bhartrhari3 here supports the non-difference of verbal forms (abheda-paksa)

¹ स नाचको विभीषाणां सभावाद्गीतकोऽपि वा। शक्याधानाय धातीर्वा सहकारी प्रयुक्तते ॥—Vākyapadiya, 2 190

³ थडारीना व्यवस्थार्थ प्रयक्षेत्र विकल्पनम्।—Vakyapadiya, 2, p. 153. Punyaraja under it - अडहिबेचनश्यवस्थाये केवले धातव: पृथगुपदिष्टा वस्तत: सीपसर्गायामेव धातलम ।

and maintains that Dhātus, though not capable of being differentiated from Upasargas, are separately mentioned only for the sake of reduplication and adagama, but they are virtually expressive of the specific sense which is sometimes assigned to Upasargas. By Dhātu we should, therefore, understand Dhātu with the necessary Upasarga (Sopasargāņāmeva dhātutvam). This view is strengthened by the existence of such root as samgrām, which is inseparably united with (Upasarga) sam and gets both reduplication and adagama, as in asamgramayat and sisamgrāmayişate. The particular action, according to this view, is denoted by the combination of Dhātu and Upasarga. Their undifferentiated character is made clearer when Bhartrhari continues that it is the specialised action (Kriyā-viśeşa), as is signified by a Dhātu jointly with an Upasarga, that gets itself connected with a Kāraka.2 This is why the root $bh\bar{u}$, preceded by anu, becomes transitive and is capable of being used in the passive voice (karma-vācya) as anubhūyate.

There arises a considerable difficulty in deciding whether a root is first joined with an *Upasarga* and is afterwards associated with *Kārakas* or *vice versa*. The conjunction of

1

⁻Vākyapadīya, 2, p. 154.

² साधनेर्याति सम्बन्धं तथाभूतेव सा क्रिया।—Ibid.

Unasargas with roots is a question of grammatical importance. Under the rule Pan., 6, 1, 135, Patañiali has referred to two Paribhāsās: (i) a root is first joined with an Unasarga and then gets itself connected with Sadhana (Karaka): (ii) n root is first added to a Sadhana and is next related to an Ungsarga. The second Paribhāsā seems to be more acceptable on the ground that an Upasarga serves to specify the action that is accomplished by Sādhana. The action is not fully accomplished until it is related to a Kāiaka. Though more reasonable than the former, the second view is not entirely free from objections. Those who lend support to the view, Pataniali holds that a Dhatu is first connected with a Kāraka and then with an Upasarga, will find some difficulty in explaining the transitive use of the root as in the expression unasuate guruh.2 It is really the presence of Upasargas like upa, anu and the like that accounts for such uses. Bhartrhari also has not totally discarded the first view, but has adduced a few arguments supporting the priority of relation between a Dhatu and an Unasarga. The drift of his arguments is as follows: -A Dhatu

पूर्व हि धातुरुपसर्गेच युक्तते पयातृ साधनेनिति। सैतत् सारम्। पूर्व धातः साधनेन युग्यते प्रयाद्यसम्भ ।-- Mahābhāşya, Vol. III, p. 03.

यो हि नन्यते पूर्वे धातु: साधनेन युव्यते प्रयाद्वपर्योगीत, तम्य चास्त्रते गुक्त क्षेत्र उपाधते गुक्तित केन स्वामंतः सात।-Mahabhasya, Vol. III. p. 94.

धाती: साधनयीग्यस्य भाविन: प्रक्रमाद यथा। धातलं कर्मभावय तथाना-दपि दस्ताम् ॥--Vākyapadiya, 2. Kör. 186.

is so called because of its relation to a Kāraka. But how is it justifiable to get the designation as such ($Dh\bar{a}tu$ -sam $j\bar{n}\bar{a}$) before the action ($kriy\bar{a}$) is completed by actual connection with a Kāraka? The action (the meaning of a root) is not likely to be accomplished before it is related to a In order to justify Dhātu-samjñā Kāraka. in a similar case where the root gets itself first connected with an Upasarga before actually coming in touch with a Kāraka, we must be prepared to assume that even the possibility of having future relation to a Kārāka is considered to be sufficient to indicate the relation of $Kriy\bar{a}$ to Kārakas. This sort of assumption is not unwarranted and rare in Sanskrit altogether grammar. The rule Dhātoh karmanah samānakartrkādicchāyām vā is an instance where the expression Dhātoh karmanah is justified on the possibility of a root having future connection with the objective case (of the root is). grammarians take it to be an established fact that roots admit of more than one meaning. The special meaning (as is supposed to be the denotation of *Upasargas*) is necessarily considered to be what is actually denoted by the root itself.

Having shown the three distinct classes of *Upasargas*, Bhartrhari proceeds to maintain the suggestiveness of *Upasargas* (*dyotakatva*) on the ground of logical inference.¹ The three views

 $^{^1}$ स्थादिभिः नेवलैर्धेच गमनादि तु गस्यते । ततानुमानाद्दिविधासद्वर्मो प्रादि- रूचते ॥— $V_{\rm Kkyapadiya}$, 2. 191.

in regard to the meaning of Upgsargas are as follows: (1) Upasargas are only suggestive of the sense: (2) Unasargas are sometimes expressive of particular meanings; and (3) the root and Upasargas jointly express the sense. The conclusion to which Bhartrhari has finally come is that Upasargas are only suggestive of the sense. According to popular usage, it should be remembered, the form tisthati is always used to mean stoppage of motion and, consequently. tisthati alone (without nra) is found to be incapable of denoting 'movement.' Here arises the necessity of taking recourse to inference.1 It is to get rid of this anomalous position that the grammarians have sought to establish the dictum anekārthāh dhātavah, so as to render tisthati alone competent to express the sense of movement. It is to be noted that the so-called suggestiveness of Upasaraas can also be logically Bhartrhari proceeds further to show how the method of logical inference called सामान्यतोद्रष्ट^१ lends support to both the suggestiveness of Upasargas as well as to the plurality of meanings of the verbal root.

Before concluding this discourse on *Upa-sargas*, we propose to give here the substance of what Gangesa has said in this connection. Quite in keeping with the grammarians, he begins with the statement that *Upasargas* are

[ू] धातुरनेकार्थ छपसर्भय योतक इत्यनुमानेन व्यवस्थायते [-Punyarāja, p. 168.

² धातुय सामान्यतीहष्टेनातुमानेनानेकाधै: :- Ibid.

only suggestive and not expressive of the sense independently of verbal forms. When we take Upasargas to be suggestive, what is necessarily implied is that they help us in understanding the specific sense of the root. But it may be argued on the contrary that Upasargas are, in accordance with the principle of agreement and difference,2 as good as significant forms of words like $N\bar{a}man$ and $Dh\bar{a}tu$, inasmuch as pra in prajayati gives the idea of perfection (prakarşa) and abhi in abhyāgacchati brings out the sense of 'proximity' and so on. Moreover, if the plurality of meanings on the part of roots is brought forward in support of the suggestiveness of Upasargas, they, it may be argued, might also be taken as possessing manifold meaning.3 To these contentions Gangesa gives his in the following way:-That roots admit of numerous meanings is accepted by all grammarians, but there is no such consensus of views so far as the meaning of Upasargas is concerned. The sense of perfection and proximity is also denoted by the root, Upasargas like pra and abhi being only तात्पर्यंग्राहक. expression तात्पर्यमाहक, as applied to Upasargas, is

¹ उपसगीस्त द्योतका. न वाचका:। द्योतकलं च धातोरर्धविभेषे तात्पर्ध-ग्राहकलं तदुपसन्दानेन तत शक्तिर्वा — Tattvacintāmaņi — Sabdakhaņda, p. 854.

⁵ धातीरिव तस्याप्यनिकार्थलात्।—Ibid.

181

an indication that the Naiyāyikas have recourse to laksanā' when they take jayati to be expressive of 'to be in a state of perfection'. Next, he draws a fine distinction between Dhātu and Upasarya by holding that the root sthā preceded by pra has the power of denoting movement, whereas pra (Upasarya) is not (śakta) expressive of the sense by itself but appears like an adjunct (śaktatāvacchedaka). That Upasaryas are nowhere used as vācaka may be further proved with reference to an instance like vyatise '(where the radical element is dropped); it is not vi and ati that are to be regarded as expressive of the sense, but we are compelled to recall to mind the root which is really significant.

Thus the grammarians have agreement with the Naiyāyikas so far as the suggestiveness of Upasargas is concerned. That Upasargas have no power of expressing the sense like Nāman and Dhātu is clear from the fact that we are not allowed to use गोमनः ए: with the same breadth of meaning as is denoted by the expression गोमनः प्रकर्ष: Moreover, neither Upasargas nor Nipātas are capable of being qualified by adjectives. It should be, however, remembered that the capacity for independent use is not the only criterion for discriminating the

expressiveness of words; for *Pratyayas*, though they are never used by themselves, are regarded to be expressive of sense. The rule Pāṇ., 1.4.93 may be cited as an indication of the meaninglessness of *Upasargas*.

What gave rise to much controversy 2 between the Naivāvikas and the grammarians is the question of Nipātas. The ground of disagreement is that the Naiyāyikas seem to have drawn a specific line of demarcation between Upasargas and Ninātas. They included Ninātas in the category of sarthaka 3 to the exclusion of Upasargas, whereas the grammarians have not made such whimsical distinction. Yāska4 has, however, shown that Nipātas have a good many meanings-similarity, collection, etc. According to the interpretation of grammar, Upasargas form only a special class of Nipātas having connection with the verb. As both of them belong to the same class of indeclinables, one is hardly justified to take Nipātas as expressive of sense and the other as merely suggestive. The so-called Nipātas only form a class of Avyayas. Words like pra and ca, which have no power of denoting a substance (dravya), are called

[े] घर्षवत्ता नीपवदाते विवर्त्तेनावचनात् ।—Mahābhāsya, Vol. I, 219 and प्रज्ञतिप्रत्यययोः सम्भूयार्थवीधवालनियमात्—Tattvacintāmaņi.

⁵ उपसर्गा: क्रियायोगे—Pān., 1. 4. 59.

Nipātas. The same reason 1 whereby the suggestiveness of Upasargas is evidently established may be put forward to prove the equal suggestiveness of Nipātas, there being nothing to account for their differential treatment. The Naivāvikas recognise the expressiveness of Nipātas for the following reasons: In instances like चनुभूयते, साचात्क्रियते, अलंक्रियते, etc., the addition of Nipātas is attended with a special significance, as cannot be obtained from the simple root kr and bhū. Moreover, Nipātas like sāksāt, namah, etc., is found to have their respective meanings fixed by lexicon and popular usage. The grammarians refute this position. They hold, on the contrary, that the usual meanings expressed by anubhavati, sāksātkaroti, etc., i.c., feeling and interviewing, are really denoted by the roots ($bh\bar{u}$ and kr), and Upasargas as well as Nipātas are only suggestive or तात्पर्यग्राहक. As a matter of fact, we might have used the expression भोभन्य in the sense of a beautiful collection, if a Nipāta like ca were really expressive of the meaning. As the word vrksah alone cannot give the idea of a collection (समुच्य), the Mimamsakas take the particle ca as expressive of collection. They do not recognise it to be merely suggestive. But the grammarians are not prepared to take Nipātas

¹ योतका: प्रादेशो थेन निपाताशाद्यस्त्रया-Vaiyākaraņabhūşaņa, Kār.

प्रारयो द्योतकाचादयम् वाचका इति न्याग्रमते स्थितं वैदस्यमयुक्तः २.कि.मास्यादिति ।—1bid.

as well as Upasargas as capable of expressing sense independently of Nāman and Dhātu. It is on the principle of Anvayavyatireka that the Mīmāmsakas have proceeded to maintain the expressiveness of Nipātas. Their arguments are open to criticism, since they have unduly attributed the significance to Nipālas. When the meaning (collection, etc.) is actually obtained from words other than Nipātas, the assumption of Śakti or significance is nothing but unnecessary, so far as the expressiveness of Nipatas is concerned. If we are allowed to have an assumption of this nature, the word Gangā might have denoted 'bank' (without the help of lakṣaṇā) by means of its primary significance or Sakti.

The negative particle na $(na\tilde{n})$ is also a $Nip\tilde{a}ta$. Generally speaking, the particle $na\tilde{n}$ has got six meanings—similarity, non-existence, difference, smallness, imperfection, contradiction. But Kondahhaṭṭa has tried to show that the sense of imposition (Artiuga) is also suggested by $na\tilde{n}$. Accordingly, the word Artiug does not only mean 'a man other than a Brāhmin,' but one who pretends to be a Brāhmin' (say a Kṣatriya). Following the line of arguments of the Bhāṣya, Konḍabhaṭṭa has also suggested another view, according to which non-existence

¹ आरोपितलं नञ्-द्योत्यम—Vaiyākaraņa, Kār. 40.

² One to whom the quality of a Brābmin is falsely attributed.

⁸ अभावी वा तदर्थोंऽस्तु भाष्यस्य हि तदाशयात्—Ibid, Kār. 41.

is the sense that is denoted by nañ. The expression nivrttapadārthakah¹ (as in the Bhāṣya) is explained by him as implying the idea of 'non-existence.' Nāgeša, however, does not agree with Kondabhatṭa on this point. The negative particle appears to be either substantive or attributive in relation to its pratiyogin.' असबैस् (as a pronoun) is an instance where nañ is used as an adjective and the negative particle is used as a noun in a word like अस meaning आद. Raghunātha Siromani 's is of opinion that both reciprocal negation and negation of association are denoted by the negative particle.

Karmapravacaniya is also regarded as a class of Pada. Some grammarians, as Bhart₁hari maintains, have treated of Karmapravacanīyas as a special class of Padas categorically distinct from Upasargas. According to this view, there are five different kinds of Padas including Karmapravacanīyas. Those who strictly support the four-fold classification of Padas, as enumerated by Yāska, are likely to argue that Karmapravacanīyas, often used as adjuncts to the relation between Krinā and Kāraka or, simply

⁻Helaraja under Vakyapadiya, 3. Kar. 1.

indicative of relation, deserve to be treated as Upasargas. There is hardly any justification for recognising them as a different class of Padas. In some cases Karmapravacanīyas like anu, prati and su exactly look like Upasargas, though they cannot be grammatically treated as such. So far as grammatical operations (specially the rules enjoining satva) are concerned, it is clearly laid down that the very name (samjñā) Karmapravocanīya is an indication that Karmapravacanīyas are excluded from the categories of both Gati and Upasarga.1 Karmapravacaniyas being thus categorically different from Upasargas, we are not allowed to have satva in examples like pari-siñcati and su-siktam.

Now what is a Karmapravacanīya? It is a class of words which is generally used as an adjunct to sambandha or relation between Kriyā In grammar sambandha is and Kāraka.2 usually denoted by Kriyā or action.3 In some cases, $Kriy\bar{a}$ 4 by its very nature gives rise to a kind of relation and then disappears without leaving any trace behind. The expression rājapuruṣaḥ, for instance, though apparently

¹ गत्यपसर्गसंज्ञापवाद:—Bhattoji.

चस्वन्यस्य भेदका इति। सस्वन्यस्य सर्व्वः क्रियाकारकपूर्व्वको भवति। -Puņyarāja under Vākyapadīya, 2. 199.

³ तथा हि सर्व: सन्नम: क्रियाञ्चत: — Helārāja.

तत्र क्वित् सम्बन्धं जनियला क्रिया विनिवर्तते यथा राजपुरुष इति । हि राज: पुरुषोऽयं ; यसात् स राजा पुरुषं विभक्तिं, ऋतो भरणलचणा. क्रियाश्रथाश्रयि-भावजन्त सम्बन्धं जनयिला निहत्ता।—Punyarāja under Kār. 2. 199.

devoid of any Rriyā or verbal form, grammatically means 'here is a man who is supported by the king.' Here the action bharana (to support) which denotes a relation between the king and his man as one of the supporter and the supported is no longer existent. In some instances, on the other hand, Kriva-nada is practically present (as in matuh smarati) and there is no such difficulty in comprehending the intended relation. Logically speaking, a verbal form serves as a link between two concepts, i.e., establishes some sort of relation between them. Sambandha is thus shown to be a product of Kriyā. But there arises some difficulty with regard to the knowledge of such sambandha, when the verbal form is not actually present. When the verbal form or Kriyā-pada is practically absent, one may doubt whether the intended sambandha is really given rise to by Kriyā or by other agents. In cases of doubt like this, says Punyaraja, Karmapravacaninas serve to determine the proper relation. The main function of Karmapravacantyas is thus to point out the particular relation denoted by a Kriyā. The author of the Mahābhāsya takes the word Karmapravacaniya as a significant one (anvarthasamiñā). He understands by Karmapravacaniyas those words that are

यदा क्रियापरं कांचत यूपते, तदा क्रियानितोऽयं स्वादिति संदिए कर्म-प्रवचनीयेन तत तत्यां क्रियायां नियम्पते इति सन्ध्यविग्रीयः कर्मप्रवचनीयेः प्रवायते । -Punyaraja.

no longer expressive of $Kriy\bar{a}$, but indicate the relation given rise to by a $Kriy\bar{a}$, whether present or absent. The difference between Upasargas and $Karmapravacan\bar{\imath}yas$ is that the former directly indicates $Kriy\bar{a}$ or specifies the action denoted by a verbal root, whereas the latter only qualifies the particular relation given rise to by a $Kriy\bar{a}$.

What we have learnt from the foregoing discussion is that Karmapravacaniyas are not indicative (dyotaka) of Kriyā like Upasargas. But one may, however, argue 1 that the verbal form that is absent $(Kriy\bar{a}-pada)$, as we have already shown, is deducible from the use of Karmapravacanīya. According to this view, Karmapravacanīyas should be regarded as āksepaka, i.e., as what serve to derive by inference a Kriyā-pada that is not actually present. Bhartrhari 2 has set aside this argument by holding that words whereby such verbal forms are inferred are generally found to have case-terminations, but never designated as Karmapravacaniyas. The second case-ending in prādeśam, as in prādeśam vipacilikhati, is due to its connection with the word vi which practically suggests the act of measuring $(m\bar{a}na)$ and is only a shortened form of

भ्रत्रूयमाणाया: क्रियाया श्राचिपका: कर्मेप्रवचनीया: कस्मात्राश्रीयन्त द्रत्याह। ---Punyarāja

² येन क्रियापदाचिप: स कारक-विभक्तिभि:। युच्यते विर्थया तप्य लिखावनुपसर्गता॥—Vākyapadīya, 2, Kār. 202.

अत विशब्दी मानक्रियाया श्राचिपकः । प्राद्धेशं विमाय परिलिखतीत्यर्थावगतेः॥
 —Punyarāja.

rimāya. Thus, we have deiliyā in prādekim as a case-termination (Kāraka-ribhakti) and not one obtained in conjunction with a Karmapraracaning. Punyaraja further observes that drifting available in connection with Karmapracacanivas is generally found in cases where south in the sense of sambandha in general would have been otherwise applicable. In some cases,1 a Karmanraracaniya like any becomes a bar to the third case-ending denoting hetu or cause.

From what has been said regarding the characteristics of Karmapravacaniyas, it almost clear that they are not indicative (dyolaka) of Krina like Upasargas, not directly expressive of sambandha which is rather denoted by the second case-ending used in substitution of sasth and not suggestive of a verbal form like the word vi, as in prādetam riparilikhati. Having thus rejected the three views, namely, indicativeness, denotativeness and suggestiveness of Karmapravacantyas, Bhartrhari has finally arrived at the conclusion that Karmapravacanivas are those that qualify the relation brought about by a Kriya, whether present or absent

PRAKETI AND PRATYAY.

Prātipadika—derivable and underivable—its meaning,—Gender—
Dhātu—a division of Prakṛti—Pratyaya—its classifications
—Sup and Tin—Taddhita and Kṛt—pratyayas—
their meanings.

Prakrti is of two kinds—Nāman or Prātipadika and Dhātu. This classification of Prakrti is accepted by Jagadisa. He observes particularly that what is called Prātipadika by Pānini and others is essentially the same as Nāman. Nāman is defined by Yāska as what denotes an object-Sattvapradhānāni nāmāni. Jagadīša defines Nāman as that crude form of a word which requires to be invariably followed by prathamā (vibhakti) for the expression of its own meaning. Objects are generally denoted by such pronouns as अदः, etc. While giving a definition of objects, Bhartrhari has explained what is really meant by Yāska's statement 'ada iti sattvānāmupa-Durga 1 observes that Naman and Dhatu are not really different and entirely unconnected with each other. There is, on the other hand, an idea of object hidden in the meaning of a Dhātu and consequently Kriyā

¹ नाम्नि यो पातु: संतत्प्रत्ययोपजनितेन...प्रातिपदिकाम्तर्जीनहत्तिरैव...द्रव्य-प्रधान एव भवति—Nirukta, p. 40.

is indirectly implied by Nāman. It has already been pointed out that Nāman too has Dhātu as its ultimate base. Now this radical element which exists in Nāman develops into a Prātipadika while followed by kṛt-suffixes. In this process of transformation it loses its power of directly expressing Kriyā and necessarily comes to denote a substance having number and particular genders.

Prātipadika or Linga, as it is called in the Kātantra system, is defined as that crude form of word which, though significant by itself, is other than roots and detached from vibhaktis.1 What is really implied by holding Pratipadika to be significant 2 is that each of those letters that go to constitute a word is not allowed to have the designation of Pratipadika (simply because of their meaninglessness). It is needless to repeat here as to how letters, though meaningless by themselves, give rise to words that are found to be significant. Sripati, the author of the Katantra Parisista, explains the term arthavat as expressive of both existent and nonexistent things, and states emphatically that by 'significant words' one should understand those words only which have the power of

ष्यंवदधातरप्रत्ययः प्रातिपदिक्तस—Pap., 1. 2. 45.

[&]quot; चर्षंबदिति व्यपदेशाय वर्णांनां च मा भृदिति।

⁻Mahābhāşya under Pāņ., 1, 2, 45.

[्]र पर्ववदिति सतो सती बार्यमाभिधायकसुच्यते । यस्तेतर्भिष्येचयाभिधानः मित्रर्पेक, तदिशार्यवस्त्रियं संभा (नामप्रकरचन) .--- Paribiota.

expressing the intended sense independently of others. But $Pratyayas^1$ from their very nature are only significant when they come in contact with Prakrti. It is, therefore, inconsistent with the view that makes Prakrti dependent on Pratyaya for its expressiveness.

The well-known commentator Gopinātha has raised an important question in connection with the import of the word arthavat. In an instance of absolute negation as, śaśa-viṣāṇa,2 (the horns of a hare), he contends, there will be no Prātipadika-samiñā, as the expression does not convey any sense that is materially existent. But what we actually find is that the expressions like śaśa-visānah and ākāśa-kusumam, etc., are used as regular Padas having sup added to them. This anomaly is afterwards explained by him in the following way:-There are two kinds 8 of objects having transcendental or absolute and practical existence, according to the Vedanta standpoint; it is only Brahman that has real existence (Pāramārthika-sattā), the cosmic world exists only in our experience (vyāvahārikasattā). Words like ghaṭaḥ, paṭaḥ, etc., signify objects that have popular existence, whereas the expressions, referred to above, denote things that have practically no material existence.

[्]चात्।—Ibid.

hoth of these grammar, we should remember. classes of words are held to be significant, and Prātipadikaas such, there is no bar to apply the samjāā to them. The reason is this. It is not absolutely correct to say that the expression 'sasavisānah' is absolutely meaning less, because the two constituents, namely, saka when taken separately, are found to have their t what makes own meanings as hare and horns, but between the the sense inconsistent is the relation parts and the whole. It must be, hov rever, admitaltogether ted that the above expression is not meaningless, inasmuch as it might be appropriately used as an instance of 'absolute negation' or utter impossibility. Bhartrha ri 2 seems to have realised the fact when he savs that words, existent or no matter whether its meaning is oduce certain non-existent, are always found to pr cognition. Gopmatha cites in support of his Durgasimha view the authoritative statement of holding that and arrives at the conclusion by ble objects. meanings of words are cognisa whether existent or non-existent 3 mention of

Patañjali has expressly made mention of two classes of Prātipadikas —derivable and

underivable. The words formed by the so-called unādi suffixes are generally called underivable words. The underivable words are those that are not capable of being derived from the recognised roots according to the rules of grammar. That words formed by the unadi suffixes are underivable, is, as the Vārttikas maintain, known by the way in which Panini has comprehended the Prātipadikas. To keep up the scientific character of his system intact, Pānini did not think it worth while to make provision for supporting the correctness of this class of words that are and diverse to come under rigid grammatical generalisation. The so-called unādisūtras are not of Pāṇini's making, but usually attributed to the authorship of Sākatāvana, who is credited with having enunciated the doctrine of 'reducibility of all words to verbal roots.' Sākaṭāyana seems to have been a grammarian of great reputation whose doctrine was accepted by Yāska and some of the grammarians. As he was not in favour of such a doctrine that tends to make all Nāmans, without exception of even Samjñā-śabda, derivable from roots, Patañjali had but scanty regard for this old gramma-This is clear from the way in which he has derived the word Sākatāyana (Sakatasya tokam). According to the interpretation of Yaska. the underivable words are good as asamvijnāta-śabda, because their accents, grammatical analysis and the radical elements cannot properly be determined by the

usual method of derivation. Of the three classes of words recognised by Durga, the so-called underivable words come under the category of Prakalpyakriya-sabda, as opposed to Pratyaksakriya, inasmuch as in cases like these the radical element or the meaning thereof has to be supplied by means of inference. The words of this description, as they do not admit of regular derivation, should be derived on the analogy of words having likeness with them, either physically or psychologically. In deriving words like these, observes Patañjali, one is to supply either Prakrti or Pratyaya, as the case may be.

The Naivāvikas have classified Namans into four classes, namely, rūdha, laksaka, uogarūdha, and naugika. The rūdha or samijādsabda is a Naman the meaning of which is fixed by sanketa or divine convention. words belonging to this class are generally found to be restricted in their particular meanings, which are somewhat different from their derivative significance. The word gault, for instance, though derived from the root gamto go, does not mean 'one that moves,' but restricted to a particular sense (an animal possessing dewlap, hoofs, horns, etc.). Jagadisa has made a further classification of Samiña. such as, naiwittikī, pāribhāsikī and aupādhikī. Words, when they are used in a secondary significance distinct from the primary or natural one, are called lakşaka. Generally, we have

recourse to laksanā or assume a special significance when the import of a sentence seems to be inconsistent with the primary significance (mukhyārtha). The usual meaning of the word Gangā, as in the expression gangāyām ghoṣaḥ, is practically incompatible with that of ghosa, for the current of water is not likely to be the habitation of people. The word is, therefore, not used in its literal sense in the above in-- stance. The word is necessarily taken to indicate the bunk so as to render the import perfectly consistent with our experience. It must be carefully noted here that there is not a distinct class of words that are always used as lakşaka and enumerated as such either by the grammarians or rhetoricians, the same word being used as vācaka in one expression and as laksaka in the other. There are certain words, as we have pointed out elsewhere, like pravīņa, kuśala, etc., which are seldom used in their primary or original sense (skilful in playing on lyre and one who takes the kuśa-grass), but have acquired a more generalised meaning (i.e., expert). The yoga-rūdha words are those that possess in themselves two-fold significance -derivative and conventional. The word pankaja, taken as a whole (samudāya-sakti), means a lotus; by the force of grammatical derivation (avayava-śakti) it means almost the same thing i.e., 'anything growing in the mud' (pankajani-kartṛtva). Though substances other than lotuses are also found to grow in mud, the force

of convention has so restricted the sense of the word pankara as to mean a lotus and not the aquatic moss. The yaugila words are so called because their meanings are the same as is expressed by their constituents, ie, prakrti and Pratyaya The yaugika words, such as kāraha, pathaka, etc., denote the same meaning as is usually signified by their component parts to which they might be dissolved by means of grammatical analysis In view of the words' like mandapa, mahārajata, etc., some have recognised another class of Naman called audhayaugika The word mandapa, unlike pankaja, has got two distinct meanings When dissolved into parts, the word means one who drinks scum, and when taken as a whole (rūdha), it means 'a house ' Here the derivative meaning is materially different from the conventional In treatises on poetics we find a special class of words known as vyanjaka, viz, sugges tive The Naiyayikas as well as the older school of grammarians have not recognised vyanjana as a separate vrtti

There is another way of classifying Nāmans, i.e., according as they are restricted in their use in regard to numbers. There are some words in Sanskiit which are never used in the singular number, there are some having neither singular nor plural forms, again, there are others that have neither singular nor plural forms. Thus, number also has been made a criterion for the classification of words. Jagadīsa

has already shown the five 1 different varieties of Nāmans (according to their numbers), as suggested by Patañjali: (1) There are words like eka, vimšati, etc., which are always used in the singular number. (2) Words like ubha, dvi, puspavant (which means both the sun and the moon), aśvin (heavenly physicians), rodasī (meaning both earth and heaven) are used to denote dual number only. (3) Words like prāna, tri, kati, etc., are found in plural number only. (4) The word ubhaya is used in both singular and plural. (5) Words like ghaṭa, paṭa, vṛkṣa, etc., are allowed to have all the three numbers.

Having shown that all words are expressive of Pratibhā or ultimately serve to bring out intuition,² Bhartrhari proceeds to discuss the meaning of words and refers to more than one philosophical view in this connection. The utterance of a word, some hold, brings out the sense of a thing only and not its particular form and inherent properties. No qualified cognition is possibly derivable from a word, i.e., what is signified by a word is only a thing without any qualifications. Just as certain words, namely, dharma, svarga, devatā, etc., fail to present

¹ एकैकेन तथा हाथ्यां वचनैस्तिसिरेव च। साकाङ्गलप्रयुक्तन्तु नाम पञ्चविधं सृतम्॥—Sabdasaktiprakasikā, Kār. 35.

[ै] अपूर्व्वदेवताखर्गै: समसाहरीवादिषु (—Ibid.

before us any material form, so words like gauh, asvah, etc., do not convey the idea of any particular forms. But difficulty arises when we actually consider the meaning of words like gauh, and asvah which, as we know, denote objects along with their respective forms. The upholder of the view says in defence that the idea of a being having hump, hoofs and horns does not really follow from the word gauh itself, but ecgnition of the particular form is drawn from some other sources, 1 viz., common experience obtained from the use of words. The qualified knowledge (i.e., knowledge of the form) is far from being the meaning of a word. Some. again, hold the opposite view. As in some cases words are found to denote a class and sometimes individuals, it is only plausible to maintain that the meaning of a word cannot be an unqualified one. This view. however plausible, is rejected on the following grounds. There are no words that denote only a class, because the idea of individuals invariably comes in, as a class is inconceivable without a substratum (individuals). Again, a word denoting a class alone is not competent to convey the sense of individuals. The word gauh, for instance, is capable of denoting a class (gotva), but fails to bring out the particular

प्रशास्त्रभैनाध्यासादाकारावयस्य थः। म स ग्रन्टस्य विषयः स हि यदान्तराययः ॥—Vākyapadīya, 2.

form of a cow-individual.1 Similarly, the word ghațuh 2 signifies only a thing (a pot) and does not imply the particular form with which the object generally comes to our cognition. Some hold, on the contrary, that the meaning of a word comprises in itself all possible cognitions about the thing denoted.3 According to this view, the meaning of a word is savikalpaka. The particular knowledge (visista-jñāna) of a thing presupposes a knowledge of its qualifications. Some philosophers have tried to show that knowledge of all descriptions is likely to be more or less qualified. Finally, a way is made out of these conflicting views. Some words are really found to be denotative of objects having particular forms and some (words like devatā, svarga, etc.) producing only formless or immaterial notions.4 Another point is then raised. There is no fixed meaning that is always signified by a word. The meaning of a word is so variant that we are hardly allowed to say this is exactly the meaning of this word.5 Just as a thing, though retaining its form unmodified, appears to be a different one owing to the defective organs through which it is perceived,

¹ न तान् व्यक्तिगतान् भेदाञ्जातिशस्दीऽवलस्वते ।—Vākyapadīya, 2.

नास्ति कियन्नियत एकः शब्दस्यार्थः —Punyaråja.

so the meaning of a word seems to be variant according to the knowledge of the speaker and the person spoken to. It is not unfrequently that we most with words which are taken in various senses by different men. The word abatah, for instance, might be used by the Vaisesikas in the sense of whole (avayavi).1 The Samkhväites may take it as implying a combination of qualities and the Buddhists and Jainas as an aggregate of atoms and so on. What should we then do under these anomalous circumstances? Human knowledge is limited by nature. It is not possible for a man to know anything in its entirety. To realise the ultimate essence of a thing lies practically beyond the range of human intelligence and what is almost incontestable is that our knowledge and experience, as Bhartrhari rightly observes, are in most cases liable to be inaccurate and imperfect. Arguing from an orthodox point of view one may say that the knowledge of ancient seers 2 (Rsis), who are supposed to have visualised the ultimate reality underlying all phenomena, is free from all limitations and imperfections and that we should do well to know everything according to their observations, so as to get rid of this stupendous anomaly. But this is far from being the actual state of things. One cannot possibly use words strictly in conformity to the manner

Punyarāja under the Vākyapadiya, Kār. 2 187.

ऋषीणां दर्शनं यद्य तत्त्वे किं चिद्यविष्यतम्—Ibid, 2 141.

of these seers. But what experience goes to prove is that they are not even above imperfection and illusion, so far as the use of words is concerned. Punyarāja has quoted a verse 1 which seeks to establish similarity between a child and a learned man, since both of them, depending more or less on popular usage and figurative use, are liable to reveal the same ignorance in regard to the use and knowledge of words. Human knowledge, it must be remembered, is bound to be of different types, the same object being variously perceived by different men. Truth does not reveal itself to all persons. A man's intelligence, however sharp and far-reaching, does not help him in getting into the real nature of things. If we closely examine our experience, drawn from personal observations, we do not fail to see how often we are deceived by it. Knowledge, as it comes from experience (cf. Locke), is subject to error. Some concrete, examples are put forward by Bhartrhari to show a number of striking inaccuracies involved in our observations or experience.2 To give one of them. Even those who are gifted with clear vision are found to say 'nīlam gaganatalam,' though the idea of tala or lower surface is not at all compatible with an entity like sky that pervades the entire sphere.

क्ष्पण-व्यवदेशास्यां लीकिके वर्कान स्थिती । जाने प्रत्यभिलापे च सहशी बालपण्डिती ॥

[ं] तलबदृष्यते व्योम खद्योते ह्यवाडिव। न चेत्रासि तर्ल व्योक्ति न खद्योते हुताग्न: ॥—Vākyapadiya, 2. 142.

What course should, then, he adopted? As our observations are likely to be false and defective in most of the cases, we should not treat them as the basis of our experience, without examining their validity by means of reasoning.1 Thus what is perceived directly by sense-organs requires to be fully determined by reasoning. Observations unaided by reasoning are not to be relied on as evidence at all. With regard to words the meaning whereof is indeterminable (asamākhyeyatattva), we must depend on popular usage and use them accordingly. The meaning of words in general, says Punyaraja, is determined by one's own range of knowledge. The way in which he has brought this lengthy discussion to a close deserves particular notice. From an extreme Advaita point of view, Padartha 2 has no material background and the relation in which a Sabda stands to its meaning (artha) is nothing but a false one (adhyāsa). This being the actual state of things, it is only idle to dilate upon a question like Sabdartha.3

The determination of the precise meaning of Nāman is really difficult. The sense that is usually conveyed by the utterance of a word is regarded to be the denotation of Prātipadikas. A word and its meaning seem to be inseparably connected with each other; and whenever that word is uttered, the particular meaning is at

¹ तसात् प्रत्यवमप्यये विदानीचित युक्तित:—Vakyspadiya, 2.

^{*} प्रशास: सम्बन्ध: पदायेक्तसत्य एवेति निर्णय:-Punyarāja.

इत्यलं निवैश्तवष्ट्रविकस्पादशैनेनेति—Ibid.

once comprehended. Now, what is actually denoted by the so-called Prātipadikas? The views that are held to solve this question may be brought under three distinct classes: is class that is denoted by all words. (ii) It is individual. (iii) It is an individual qualified by the class. It should be noted here that the Mīmāmsakas are the upholder of the class theory. They maintain that all words signify class alone, the usual meaning of an individual arising on account of the mutual dependence of the class and the individuals. Among the grammarians, Vājapyāyana and Vyādi, as wei find in the Mahābhāṣya,1 held respectively class and individual as the meaning of words. The Naivāvikas have, however, brought about a reconciliation between these two discordant views. They hold that it is neither class nor individual alone but individual qualified or conditioned by the class is what is really denoted by a word. The defect of the class theory, as pointed out by Jagadīśa² and others, lies in the fact that the cognition of an individual is not produced at all, if class alone is taken to be the meaning of all words. The individualistic theory is, on the other hand, open to such fallacies, as endlessness and vagueness.3

¹ Mahābhāṣya, Vol. I, under the rule Pāṇ., 1. 2. 64.

² जातिमात्रे हि संकेताहाक्तेभीनं सुदुष्करम्—Sabdasakti, Kār. 19.

In view of the rules of the Astadhvavi.1 Patañjali observes, it appears that both the class and the individual were held to be the meanings of words by Pānini. It is further2 held by some that gender, number, and Kārakas are also signified by Prātinadikas. There are. therefore, practically six different views with regard to the meaning of Pratipadikas. Kondabhatta s has made reference to five different views-(i) class. (ii) class and individual, (iii) class, individual and gender, (iv) class, individual, gender and number, (v) class, individual, gender, number and Kārakas. Gadādhara has also alluded to these five views. While we take such a wide view in regard to the denotation of a Prātipadika, we cannot afford to lose sight of the fact that Pratyayas necessarily become only indicative (duotaka), if all possible meanings were assigned to Prātipadikas alone. The second view, i.e., both the class and the individual are meant by words, is explained by Patañjali in the following way: it is a not at all reasonable

[े] किं पुनराकृति: पदार्थ फाशीखिड्यम् ? उभयमित्याह । क्वयं फावते ? उभयया द्यावायेण सुताणि पतितानि। Mahabhāsya, Vol. I, p. 6.

to maintain that words denoting a class are never found to express the sense of an individual and vice versa. But what appears to be exactly true is that both the class and the individual are signified by words. Examples are not wanting to show that a word which has a class as its meaning is also capable of denoting individual, with this difference that in one case the sense of a class is directly obtained and that of an individual is only indirectly implied. the case with regard to words Similar is denoting individuals. Some grammarians have also explained this view from the Naiyāyika standpoint. They hold that the meaning of all words is an individual qualified by the class. There arises, however, some difficulty when one attempts to maintain gender, number and Kāraka also as the meanings of Prātipadikas themselves. It is almost like a grammatical fallacy to include gender, number and Kāraka within the Meaning of Pratipadikas. According to this view, nothing is left to be expressed by Pratyaya. If we take linga as pertaining to word and explain the rules Pan. 1.2.47. and 4.1.3. as referring to Prātipadikas denoting both masculine and feminine genders, linga also appears to be denoted by Prātipadikas. It is definitely stated in the Lingānuśāsana that Prātipadikas are expressive of linga. Nāgeśa also holds the same view. The way in which the rule Pān. 4. 1. 4. has been explained by Patanjali denoted makes it clear that linga is also

by Pratinadikas, the suffixes like tan. nin being only indicative. The real difficulty arises in connection with number and Kāraka. Patañiali has explicitly stated elsewhere that oneness, duality, plurality, etc., as well as Kārakas are signified by case endings. Moreover, the method of agreement and difference, as applied to the analysis of words into base and suffixes, shows that number and Kāraka should be taken as the meaning of Pratyaya. We have already pointed out the difficulty of arriving at a solution whether the entire meaning of a word is denoted by the base itself and the suffix serves only as an indicative or vice versa. Bhartrhari seems to have doubt with regard to this position. He maintains that the case-endings are either indicative or really expressive of sense,1 or the meaning is expressed by both Prakrti and Pratuava in their combination.

An examination of the grammatical treatment of gender has been made in the Linguistic Speculation of the Hindus. Prātipadikas² form the base to which Pratyayas like tāp, nīp, are added. The grammarians³ failed to make a scientific treatment with regard to the problem

of gender. The popular conception of gender 1 had its origin in the distinctive features male and female. But it is of sexes such as very difficult to justify the grammatical use the evidence of physical of genders simply on characteristics. A vrksa or a khatvā does not rightly observes,2 such possess, as Patañjali physical features as would justify its gender. Grammar had to depend so much on popular usage with regard to the determination of gender that it failed in most cases to give a One turns to grammar scientific explanation. in vain to explain the question of sex in words The fact that accounts like iyotsnā and nadī. for such usage should be sought elsewhere. It is rather a poetical fashion, which represents all that excite pleasurable sensations and exhibit female virtues (tender less, loveliness, submissiveness, etc.) as females, that is to a certain extent responsible for attributing the female characteristics to the 'moon-beams' and 'current of water.' The word usas seems to have its gender similarly fixed by a poetical outlook of nature. The seers of the Rk Veda, as they are often called kavi of krāntadarsin (one who has visualised the finality of a thing), were not

wanting in poetical idea lism when they described

[ा] स्तानकेशवती स्त्री स्थास्त्रोमगः। विषयः स्तृतः। Mahābhāṣya, Vol. II, p. 196.

म्यौँ देवीमृषसं रोचमानां मयौं। योपामधेति पशात् । १९ Veda.

Uşas (dawn) as the beautiful wife of the Sungod. This is, however, a tentative explanation, as it does not apply to all similar cases. Though a flower appears to be tender and graceful to our sentiment, the word kusuma is used in neuter gender only. There is so much laxity of the idea of sex in the use of gender that it would be a positive mistake to look upon grammatical genders strictly as an indication of sex. words 1 dara and kalatra form another instance of the irregularity of gender. Though denoting the same thing, viz., wife, they are so sanctioned by popular usage as to be used in masculine and neuter genders respectively. As in respect of our knowledge of laukika linga, we are guided more by popular usage than by conception of sex, Patanjali has repeatedly drawn our attention to the fact that the determination of genders from a scientific point of view lies almost beyond the jurisdiction of grammar.

Patanjali² has said it more than once that the popular use of gender is too rigid and fanciful to come under any general principle. The popular conception of sex has, therefore, very little to do with the grammatical use of gender.

¹ एकार्षे प्रस्तावलाहर् सिङ्गान्यतम्। Mahabhāsya, Vol. II, p. 196 - मन्दानामिकार्थेऽपि लिङ्कचनमेदः, दारा: कस्तरं भार्येति । Durga Simha under tho role लोकोपचराह इचितिह:—Kalāpa, 23.

² तखात वैयाकरचे भक्तं लीकिकलिइमाध्यातुम्। Mababbasya on the rule Pap., 4.1.3.

Patanjali has, however, suggested two characteristic features of males and females on a more or less physiological ground.1 According to this view, a female being is one wherein something is developed; a male serves the agent of production; and that which represents an intermediate stage between these two aspects (development and production) is known as napumsaka. The popular conception of sex does not help us in the least when we try to explain the propriety of gender in vrksa and khaţvā. 2 These criteria are not even applicable to all cases, since production and development refer to qualities and not to persons. Both males and females are found to be the substratum of these qualities. What, then, should be the standard of making such a distinction between sexes? Patanjali finally says that the desire of the speaker 4 is what accounts for such use, viz., when development or growth ' is intended to be implied, we take it as female and so on. Gadādhara is of opinion that the suffxes like tap, etc., enjoined by the rules $striy\bar{a}m$, $aj\bar{a}dyatast\bar{a}p$, etc., are sometimes found to express strītva, as an adjunct to what is denoted by the base. The grammatical use of strītva

¹ संस्थानप्रसवी लिङ्गमास्थेयी खक्ततान्तत:। M. Bhāsya., Vol. II, p. 197.

² खटुाहची न सिध्यत:। Ibid.

s वस्य पुन: स्थानं स्त्री प्रहत्तिर्वा पुनान ? गुणानाम । Ibid.

⁴ विवचात: । संस्थानविवचायां स्त्री प्रसविवचायां पुमानुभयोरविवचायां नमु सक्तम । Ibid.

does not necessarily bring out the idea of a female being. It is not logically correct to say that stritea is directly meant by such suffixes. The words khatra and rrksa, etc., form exception to the popular conception of gender. The addition of an adjective as human being 1 does not even remove the difficulty. The word devatā (though it means divine being-both male and female) is found to be used in feminine gender only. According to the grammarians,2 strīpratuauas are only indicative (duotaka) and not expressive. The grammarians have comprehended gender also in the meaning of Pratipadikas. But Gadadhara does not fully agree with the grammarians. He maintains on the contrary that stri-pratyayas are only expressive of stritva. It is why linga has been specially mentioned as distinct from Pratipadilartha in the rule Pan. 2. 3. 66. He is quite right when he says that the strī-protuavas in words like khatvā, atavī, and devatā are absolutely meaningless.

Just as in the Samkhya doctrine of evolution, *Prakṛti* is held to be the primordial substance out of which the entire world, both material and intellectual, has sprung up, even so in grammar

¹ प्राणिलेन विश्वणेऽपि देवतादी व्यक्तिचारात् । Vyutpattivada, p. 118.

Dhātu represents the ultimate element wherefrom all possible forms of words have evolved. The verbal roots are the last result of grammatical analysis and form the real foundation of all verbal structure. The roots, very much like the atoms of the chemist, do not admit of further division; it is to such roots or phonological types that the Nairuktas and grammarians look for the starting-point in their process of derivation.

According to the *Root-theory*, as expounded by Śākaṭāyana, all words, even without the exception of proper names, are derivable from roots. *Dhātu* is significant by itself and is said to be the final germ of all word-forms. It denotes *Kriyā* or action (*dhātvarthaḥ kriyā*). Jagadīśa's classification of *Prakṛti* is essentially reducible to one, *i.e.*, *Dhātu*, for *Prātipadikas* or *Nāmans* too have roots as their final elements.

According to Yāska, the meaning of a verbal root is $bh\bar{a}va$, i.e., action or becoming. $Bh\bar{a}va$ or $Satt\bar{a}$, as we have already said, is the meaning of all roots. It is one and all-pervading, but seems to be manifold on account of its association with different $up\bar{a}dhis$. This $satt\bar{a}$, though intrinsically one, has got such potency as to reveal itself into manifold form.²

¹ सर्वाखातजानि नामानि। Nirukta.

² एवं सुतासखाः काश्चन भक्तयो विद्यन्ते येनेकैव सती तथा तथा विचित्रेण कृपेण प्रतिभासते।.....तथाहि सर्व्वभक्त्यात्मभूतत्वाद्वज्ञणोऽनेकविकारप्रदर्भनसामर्थ-जचणा अविद्याख्याः प्रक्तिः कार्यभेदादुपचरितनानात्वा समसौत्यागमविदः।

According to the followers of the Agama. Brahman, as Helārāja savs, comprises all Sakti as its own self. Aridua, which is only a Sakti of Brahman, is capable of showing innumerable modifications and appears to be manifold owing to its diversity of actions. The doctrine of Vārsvāvani, as elucidated by Yāska,¹ shows clearly how bhara or maha-satta manifests itself in six different aspects, namely, javate, asti, rinarinamate, varddhate, apaksīyate and vinašyati. We must remember that every thing is liable to pass through these stages. These successive stages from production to final destruction are be regarded as rikāra or modifications of bhava which, under different upadhis, is called by so many different names. Helārāja a maintains that a thing by its very nature is first produced before it is said to be existent. The question of vikāra only comes in connection with bhara or objects that are already existent. One vikāra or modification of a state into another does not retain its nature unchanged for a moment; parināma or modifleation is immediately followed by growth and growth by decay and so on. This is exactly harmonious with the Samkhya doctrine of

¹ पड् भावविकास भवनोति वायायिक जायने द्रान विपरिचमते वर्दते द्रपचीयते विनय्यतीत।--Nirukto, p. 44.

³ सम्राक्तमाडासमात् पूर्णे जायत इत्यवसीयते पदादस्तीति। स्वश्चितस्य विकारापिसिस्ति विचरित्मते तम विपरिकान् मुक्तमैति नावतिष्ठते इति वर्दते यावरनेन वार्तत्रयं ततीऽपधीयते।

⁻Heläräja under Yakyspadīya, Kār. 3. 36.

parināma. The whole world is in a flux of constant changes and nothing, as Patañjali¹ observes, remains in its own form unchanged for a single moment. There is no growth that is not followed by decay and no decay that is not attended with destruction. In this way everything undergoes a series of changes and loses its nature every moment.

Patanjali has suggested two definitions of Dhātu as kriyāvacano dhātuh and bhāvavacano dhātuh which practically mean the same thing, i.e., (i), a root is expressive of action; (ii) a root denotes becoming (bhāva). He observes further that the meaning of a root, i.e., action, is invisible and is only comprehended by inference. That a root signifies action is clear from the fact that the verbal forms like pacati, gacchati, etc., are found to have co-inherence (sāmānādhikaranya) with karoti.² To be more clear, the meaning of all roots is capable of being expressed by the term karoti.

By the meaning of a root, Nāgeśa understands 'action that is attended with efforts and leads to the fruit.' In pursuance of the view of Patanjali, Kondabhatta says that

¹ न होह विश्वत् खिस्मिनात्मिन सुहत्तीमवितष्ठते। वर्डते वा यावदनेन वर्डितव्यमपायेन वा युज्यते।—Mahūbhāṣya, Vol. II, p. 191.

² वर्ष पुनर्जायते क्रियावचना: पचादय इति ? यदेतेषां करीतिना सामानाधि-करण्यम्। किं करोति ? पचिति। किं करिप्यति ? पच्यति।—Mahābhāṣya, under the rule Pān. 1, 3, 1.

³ फलानुन्लो यतसहितो व्यापारी धालर्थ: |-Mañjūṣā,

⁴ फलव्यापारयोधीतुरात्रये तु तिङ: सृता: (—Vaiyākaraṇabhūṣaṇa, 1, 1.

both the action (favourable to the result) and the fruit are expressed by roots and that the substratum alone is denoted by the suffix tin. The Mimamsakas hold, on the contrary, that the fruit alone is denoted by the root, the action being denoted by the suffix. But this view goes quite against that of the grammarians. The rule Pan. 3.1.69, clearly shows that the suffixes like tip have nothing to do with the action (vyāpāra), but they simply indicate the agent, the object, number, etc. The followers of the Navya-Nyava school maintain that the meaning of a root is action favourable to the fruit, According to this view, the verbal form gacchati means 'an action, i.e., movement, leading to the conjunction' (samyoga). 1

There is, however, certain difference in regard to the way in which the grammarians and the Naiyāyikas construe a sentence for the sake of deriving the verbal cognition (sābda-bodha). Both the Mīmāṃsakas and the grammarians arrange the words of a sentence in such a way as to render the action (kriyā) principal in a rākyārtha, with this difference that the former take action to be the meaning of suffixes, while the latter comprehend action as the signification of roots. The grammarians are expected to put the expression Caitrastandulam pacati in the form of a logical

proposition which will run thus: Caitra-kartṛka-taṇḍula-karmaka-pākaḥ, viz., 'the act of cooking which has Caitra as the subject and rice as the object.' The Naiyāyikas, on the other hand, will bring out the meaning of the expression by such an arrangement of words as would make the meaning of prathamānta-śabda (words having first case-ending after them) as the principal one. According to their construction, the sentence will mean: taṇḍula-karmaka-pākānukūla-kṛtimān Caitraḥ: viz., 'Caitra is the substratum of action that is favourable for cooking rice or which has rice as its object.'

Pratyayas are held to be significant by the grammarians, though their expressiveness depends on their association with the base. Pratyayas are of different kinds and numerous. Jagadīša has classified them under four heads: '(i) vibhakti (sup and tin), (ii) pratyayas like nic, san, yan, etc., that form part of the root, (iii) taddhita, (iv) kṛt--suffixes. Of these, the vibhaktis, viz., sup and tin, are primary suffixes and the rest are only secondary, the former being added to Prātipadikas and roots to denote number, whereas the latter, though coming after Prātipadikas and roots, have special signification. Both sup and tin generally denote

विमिक्त शैव धालंगसिंदतः क्रदिति प्रमात्। चतुर्धा प्रत्ययः प्रीक्तः सादिभिः पश्चधायवा। number. Sup is, again, of two kinds!—(i) sup as denoting Kārakas; (ii) sup as specially enjoined in conjunction with certain words (Upapada-vibhakti).

The author of the Varttika has expressly stated that subject, object, instrumental. etc., as well as number (singular, dual and plural) are denoted by sun-terminations.2 Patañiali has also lent his support to this view which is directly based upon such rules of the Astādhuāuī as $P\bar{a}n$, 2.3.2, and $P\bar{a}n$ 2.3.18. The author of the Vaivākaranabhūsana enumerates substratum, limit, object, relation or efficiency alone as the meanings of sup. It must be, however, remembered that the expressions current in a language are so varying and numerous that the above enumeration of meanings is found to be far from being accurate and exhaustive. The Naivāvikas and the grammarians have tried their utmost in forming the definitions of karmatva, kartriva, etc., so as to render them applicable to all possible instances. But they could not sucessfully cope with the immensity of the task. A careful examination of some

कर्मलादयी विभन्नवर्थी: (and एकत्वादयी विभन्नवर्धाः) ।

⁻Vaiyākaraņabhūşaņa, Kār. 24.

instances will make it clear that the meanings of the sup-terminations are manifold. We may hold without going into minute details that the substratum is the meaning of the accusative, the instrumental and the locative. Karman is the substratum of the fruit resulting from action. In connection with Kriyā and Kāraka two things are to be specially noticed—action (vyāpāra) and the fruit resulting from it (धात्पात्तव्यापार-जन्मफलस).

In an expression like 'Devadatta is going to the village', the action, i.e., movement, resides in Devadatta, while the fruit produced by such action, viz. conjunction, accrues to the village. In the same way Karana and Adhikarana may also be shown as what denote the substratum of action. Now what we like to impress is that the second case-ending, as shown above, does not only denote substratum but has manifold significance. In the Vyutpattivāda, Gadādhara has elaborately dealt with the meaning of vibhaktis. We propose to give here only a few instances from the Sabdasaktiprakāsikā and the Vyutpattivāda.

On the strength of the rule $P\bar{a}n$. 2.3.2., Gadādhara observes that the second case-termination signifies karmatva, i.e., the state or quality of possessing the fruit resulting from an action $(kriy\bar{a}janyaphalas\bar{a}litvam)$. Generally speaking, $\bar{a}dheyatva$ or the state of being the subsistent is the meaning of the second case-termination, as shown in the foregoing examples,

but it has other meanings also. In the sentence1 ahatam janati, visavatra or 'the state of being the object of cognition' is directly implied by the second case-termination, while limit is denoted by the same case-ending in arablua lasvam dasamim ca vavat. Again, the second case-ending is also found to signify vidheuatra or uddesnatea in connection with roots meaning 'to infer,' as is evident from the example rabnimanuminomi.2 In tarum tvajati khagah, the driffuavibhakti means separation (vibhāga), and adhıkaranatna in an instance like Kākimanurasati. Thus we find that adheyatra, uddesyatra, avadhitra, vidheyatva, nirūpitatva, (as in māmantarena"), prativonitva, anuvogitva (as in dandam vinā) are all denoted by the second case-ending.

It should be also noticed that vibhaltis fall under two classes in grammar. Kāraha or case-terminations and Upapada-vibhalti, the former denoting Kāraha and the latter coming only when certain words are added and have no connection with Kriyā. When these two classes of vibhaktis are simultaneously applicable in regard to an instance like namasharoti devān, the Paribhāsā enjoins that case-terminations will have preference to Upapada-vibhaktis.

घटं जानातीत्यव विषयलं विवयिता वा दितीयार्थ:—Sabdasaktı.

अनुमित्यर्थकथानुयोगे विधियत्वसुद्देश्यत्वं वा दितीयार्थ:—-Vyotpattıvāda, p 55,

चनरानरेण-युक्ते इति दिवीयाया निद्यापतलम्थै:—Ibid p.77.

चयपटविभन्नी: कारकविभक्तिर्थलीयसी।

The rule $P\bar{a}n$. 2.3.18. implies that both the agent and the instrumental having relation to Kriyā are primarily denoted by the third case-ending. Durgasimha observes that sentences like prakṛtyā cāru (beautiful nature) the word prakṛti may be taken denoting the instrumental (karana) in connection with such a verbal form, as bhavati 1 that is to be supplied to make the sense complete. dandena ghatah (which is admittedly instance of hetu) the third case-ending, maintains, indicates karanatva, Jagadīša² though it is not regarded as a Kāraka on the ground of its having no relation with action. In ghatatvena jānāti, tṛtīyā implies prakāratā or the state of being an adjective. As both subordination 8 to the action of the agent as well as a cause 4 associated with action are denoted by the third case-ending, Gadādhara arrives at the conclusion that it has a two-fold signification. This view is quite analogous to the statement of Bhartrhari.

Substratum or recipient is said to be the general meaning of the third and seventh

तथा ह्यभिरूपभवने प्रकृति: करणम्—Ibid.

प्रकलादीनामपि करणलमिक भवतेर्गस्यमानलात् (— Tikā under the rule येन क्रियते तत करणम्— Kalāpa, 218:

² दर्छेन घट दलचापि त्तीयार्थः करणलम्। परन्तु तत्र कारकं क्रियानन्विय-लान् |—Sabdasaktiprakūsikā.

³ व्यापारे कर्तृव्यापाराधीनलं निवेशनीयम् ।—Vyutpattivāda, p. 85.

⁴ करणलं ततीयार्थ:, तच व्यापारवतकारणलम् (—Ibid.

⁵ वस्तुतः समिध्याहृतकर्तृव्यापाराधीनले व्यापारवत्कारणले च तृतीयायाः मित्रद्यम् ।—Vyutpattivāda, p. 86.

case-endings. From the very definition of kartytva and adhikaranatva, it appears that both the agent and adhikarana are, as a rule, regarded as the substratum of action (kriyāšrayatva). The difference between them lies in the fact that the agent is directly connected with a Kriyā, while Adhikarana connects itself with a Kriyā only indirectly, i.e., through the medium of either the subject or the object. This is quite clear from the definition of Adhikarana as suggested by Bhartyhari.

The fourth case-ending denotes Sampradāna, i.e., implies the purpose (uddesya). This sense is obtained from the expression yamabhipraiti in the rule Pāṇ. 1. 4. 32. The fourth case-ending also indicates ādheyatva, as in maitrāya rocate and viṣayitva in such instances as Caitrāva kupvati. nuspebhyah sprhayati.

The fifth case-ending denotes avadhi or limit of separation. It also means janyatva or the state of being a product, as in dharmādutpadyate sukham. Here virtue is the cause that produces happiness as its effect. Sometimes it implies substratum and place of origination as, in valmākāgrāt prabhavati and himavato Gangā prabhavati. It is not grammatically correct to use the word dhruva in its literal sense, i.e. 'motionless,' as in that case one fails to support Apādāna-kāraka in the example

कर्तृकर्मन्यविष्ठतामसाचाद्यक्षारयत् कियान्।
 चपकुर्व्वत् क्षियासिद्धौ शास्त्रेऽधिकरणं सृतन्॥—Väkyapadiya.

dhāvato aśvāt patitaḥ where the limit of separation is far from being motionless. But Patañjali has taken a peculiar position. He maintains that in dhāvato aśvāt patitaḥ (fallen from a running horse) 'the state of being a horse' and the swift motion are to be considered as dhruva.

The genitive implies sambandha; it is said to have various meanings. The relation is of various kinds. It is to be particularly noticed here that sambandha, as is donoted by the genitive, is excluded from the category of $K\bar{a}raka^2$ and $sasth\bar{\imath}$ is not treated as a casetermination (as it has no direct connection with the action).

After showing the different meaings of case-terminations, the grammarians have finally arrived at the conclusion that efficiency or Sakti alone is denoted by all case-endings. It has already been pointed out in these pages that all objects of thought, as are denoted by words, represent but different manifestations of Sakti, and that time, space, action, and Kārakas are only various forms of Sakti which pervades the entire world of thought. The inconceivable

यदचेऽचलमाग्रगामिलं तद्भुवं तच विविचतम्—Mahābhāşya, Vol. I.

² सम्बन्धी न कारकं, न वा तद्धिंकापि षष्टी कारकविभिक्त:—Sabdasaktiprakāsikā, under Kār. 67.

⁴ निमित्तमेदादिकेव भिन्ना शक्ति: प्रतीयति। पीढ़ा कतृत्वमेवाइसात्प्रहत्ति-निगन्धनम्॥—Vākyapadīya, 3. 37, p. 199.

force that brought this universe into existence and whereby everything is being regulated is considered to be an inexhaustible and perpetual reservoir of $\mathcal{S}akti$ or efficiency revealing itself through diverse objects. What is called life or conscious principle is ultimately an emblem of this all-pervading force. According to this view, therefore, everything is made up of $\mathcal{S}akti$ or essentially a congregate of efficiency. This $\mathcal{S}akti$ is, again, said to be either identical with, or different from, the object wherein it inheres.

Substratum 1 (i.e., the agent and the object) is said to be ordinarily meant by ākhyātaterminations. We have already said that action as well as fruit are expressed by roots (phalavuāpārauordhātuh). Udavana 2 maintains that effort (yatna) favourable to action is the meaning of all ākhyātas. A root, some hold, signifies only effort and akhyata denotes the favourable action, the sense of effort being derivable by means of inference. Some hold that tinterminations express action (vyāpāra) and do not actually signify the agent. The grammarians, however, do not agree with them; for whenever a verbal form is used, the subject is at once comprehended. The

¹ धातुब्हतिकतिडां कर्नैकर्मस्य आय्योऽष्टंः। तच करीर व्यापाराय्यः, कर्माण फलाय्यः: धात्यंमावातुबादकत् भावे तिङ्—Майјаेश्व (तिङ्यंनिस्पण) again आय्ये तु तिङ: खृता:—Vaiyākaraņabhūṣaça.

[ै] धातुना यव: प्रतीयते, पाष्यातस्य चातुक्तव्यापारमावाधेकत्यमाचेपादेव च यवलाम::—Ibid, ग्राप्तक.

Mīmāmsakas hold that bhāvanā or action is practically denoted by tin-suffixes, 2 the subject being cognisable by means of arthapatti. grammarians have rejected this view on following ground:—if action or $bh\bar{a}van\bar{a}$ is to be regarded as the meaning of terminations, there would be no idea of action in bhoktavyam which has got no ākhyāta suffix immediately following it. The rule Pan. 1.3.9. is also an indication that roots are expressive of action. According to Kātyāyana, it is the root that expresses action and not the termination; for in pacati and apākṣīt the meanings of the suffixes are varying, whereas the root pac with its significance repractically the same. By the application of the method of agreement and difference it is possible to determine the distinct signification of both bases and suffixes.⁸ further held that number, time, Kārakas and action are generally denoted by ākhyātas. expression 4 'Caitra is going to the village' means accordingly an action favourable for the present conjunction of the agent who is one and non-different from Caitra with the object that is non-different from (or identical with) the village.

 संयोगसदत्त्व्वा व्यापारः।

According to the Naiyavikas, lakaras imply the agent, time and number. Lat means present time (vartamāna). There is also doubt whether the sense of lakāras is expressed (vācya) or suggested only. Bhattoji seems to be in favour the expressiveness of lakāras. Lit is used to denote pāroksya, viz., the state of being invisible, or imperceptibility of action. When lit is used in the first person, sometimes we have a peculiar meaning. The expressions HAIST कि विस्ताप, नाई कलिइ जगाम, etc., are intended to show that the speaker was either in a sleeping mood or in a state of oblivion, Lot means almost the same as lin, that is, injunction, invitation, etc., or, in one word, inducement (pravarttanā).

There are certain suffixes like kyac, kyan, kāmyac, san, yan, which appear to be the last part of a root. These are called secondary suffixes; they have either Nāman¹ or Dhātu as their bases. The suffixes like kyac, kyan are added to Nāmans (nāmadhātu), while san, yan, etc., come after roots (dhātvantāvayavarāpaḥ).

It is not correct to say that the *taddhita*-suffixes, as a rule, have $N\bar{u}man^2$ as their bases, because case-endings as well as suffixes like kyac, etc., are also added to Nāmans. By taddhita, 3 Jagadīsa understands those suffixes

[ा] नामप्रकृतिकथार्थं धातुप्रकृतिकल्या-Sabdasakti, Kar. 109.

^{*} नामप्रकृतिको नैवमतिव्यास्त्रादिदोपत:- 1bid. 110.

³ विभक्तिधालंशकक्रीऽन्यः मत्यग्रसद्वितम्— Ibid.

that are distinguished from vibhaktis (sup and. tin), suffixes that form the last part of roots and krt-suffixes. The taddhita suffixes are of different kinds. We give below only a few specimens of these suffixes:—(i) some of them are patronymic suffixes (apatyārtha-pratyaya), as, an, in, etc. (kaurava, aupagava); (ii) express modification as. (modification of stone); (iii) some express colouring; (iv) some denote one's deity (sāsya' devatā) as, Saiva (one who has Siva as his adorable deity); (v) some denote one's place of residence; (vi) some express one's possession, as, $gom\bar{a}n$ (one having cows); (vii) some denote a collection, as youvatam (an assemblage of young ladies); (viii) some are expressive of time, as māsika (continued for a month). From a grammatical point of view, the taddhita-termination an in aindram havih is used to express (sāsya devatā) the clarified butter which is offered to Indra as the deity. Kondabhatta says that the suffix an in such a case means 'what is to be offered to a deity " (devatā-višistam deyam). In the above instance, deyam or what is to be offered is used substantively and the deity to whom such an offering is made appears to be attributive.2 According another view, both the deity and the substance to be offered are the meanings of the suffix.

[े] देवनाविभिन्नं सेंग्रं प्रत्यवाये: (—Vaiyākaraņabhūgaņa.

म् प्रवार्धम्यक्ति प्रशास्त्री विशिष्णम्—Vsiybkarapabbüçana, Kar. 52.

It is also held that the base denotes the deity and the suffix expresses the offering. 1

Bhāva (Sattā) or existence is what is expressed by all Prātipadikas. This sattā is the same as summum genus (mahāsāmānya 2) which permeates through the world, only cognisable as differentiated in different individuals. It is expressed by all words; it is signified by all Prātipadikas, roots and suffixes like tra and tal. These two suffixes generally express the idea of a class and sometimes indicate existence or the ultimate reality of things. Patañjali has clearly shown what is precisely denoted by the suffixes ton and tal while commenting on the two Vārttikas on the rule Pan. 5. 1. 119. Kondabhatta says in the beginning that the signification of the two taddhita suffixes, i.e., tra and tal (expressing 'the state of becoming,' or quality, or property) has been fully discussed by Bhartrhari in his commentary on the Mahābhāsya (which is no longer available). The drift of his statement is as follows: the suffixes tra and tal are added to krdanta, samāsānta and taddhitānta as expressive of relation.8 'The expression of relation' is the sole purpose that is served by the addition of these two suffixes. The following

instances will make the point clear. rājapurusatva a relation between the king and the servant; in pācakatva a relation between an action and the agent: in aupagavatva a relation between the father and the son is denoted and so on. Kaiyata observes that when the word gauh is used to denote only a class (gotva), these suffixes would then imply only 'the form of a word' (Sabda-svarūpe bhāva-pratyaya), but when it is used to express only an individual, the suffixes would then necessarily imply a class that would serve as an attributive. The terminations denoting an abstract idea, as in sato bhāvah sattā, 2 are generally used to indicate a class. Kaiyata³ finally concludes that satta existence is the only meaning of such suffixes (bhāva-pratyaya).

There are two $V\bar{a}rttikas$ which throw much light on the meaning of $bh\bar{a}va$. The first $V\bar{a}rttika^4$ is intended to imply that the suffixes tva and tal are used to express that outstanding property $(guna, j\bar{a}ti)$ or the ultimate reality of a thing) by virtue of the possession of which a thing generally gets its particular designation or name. According to this interpretation, what accounts for the use of a word in a particular

¹ गवादय: ग्रन्दा यदा जातिमात्रवाचिनस्तदा तेभ्य: शन्दस्वकृपे भावप्रत्यय:। —Kaiyaţa.

² सत्तेति जातावेव भावप्रत्यय:।

sense is the inherent properties (guna, jūti, etc) of the object denoted (pravrllmimitta). The Naivāvikas hold that these suffixes are added to words (as ghatatva, manusyatra, etc.) to express the idea of a class. As the Naivāvikas usually comprehend the individual with direct reference to the class to which it belongs, they are apt to speak of a ghata as ghatatiaracchinna, i.c., the concept of qhata as conditioned or qualified by that of the genus (ahatatva). It is almost evident that the meaning expressed by tre and tal seems to be as good as a qualifying attribute in relation to the meaning of the base to which they are added. This is exactly what is meant by Kondabhatta when he states prakrtuarthaprakāratām 1 According to the second Vārttika.2 the meaning of a word is exactly what it signifies by the force of its natural expressiveness. The word gauh, for instance, has gotva as its pravrttinimitta, or the object for which it is used. Here sabda itself, with its meaning as denoted by the suffixes tva and tal, acts as an attributive. The sense denoted by a word serves as an instrument so far as the use of that word (for the purpose of expressing the sense) is concerned. That it is the same with the knowledge of the meaning is also sufficiently clear from

210

Gangesa's definition of Sabdaprāmānya or the trustworthiness of Sabda.

Krt-suffixes have roots as their bases. Those that are used in the active and passive voices denote respectively the agent and the object.2 The suffixes like ghañ, ktin, etc., generally express $bh\bar{a}va$ (action). $Bh\bar{a}va$ denoted by a suffix like ghañ is accomplished (siddha). The word pākaḥ is found to require a verbal form as bhavati and has both number and gender. Patañjali³ has shown two-fold bhāva—bāhya and ābhyantara. Bhāva denoted by suffixes like ghañ is called bāhya and that denoted by suffixes as tumun, etc., is denominated as ābhyantara. Kriyā or action manifests itself in two different forms, namely, siddha or accomplished and asiddha or unaccomplished; the former means an action like gamana that is accomplished, i.e., cessation of movement, and the latter indicates the continuity of action as gacchati. A bhāva when accomplished and followed by a krt-suffix seems to be as good as a substance and in consequence of such materialisation it comes to have gender

and number and is finally treated as a Kāraka in relation to some other verbal forms, as gamanam karoti. This is the import of the grammatical dictum 1 (क्रद्रभिष्टिती भावी द्रव्यवत् प्रसागति) which clearly states that an action (bhāta) expressed by krt suffixes appears to be just like a substance and thus deserves all the functions of a Pratipadika. Krtya (tavya, aniya, etc.) and hhalartha-pratyayas, when used to express bhaia, denote an action that is unaccomplished. Similar is the case with the suffix hta when used to denote bhara only. In an instance like edhilavuam, it must be borne in mind that there is no desire for any other verb to make the sense complete. Patañiali a has clearly shown the difference between bhava as expressed by tin and ket suffixes, the former suggesting the idea of time and person and the latter producing the sense of a thing. There is another way of distinguishing them, as bhava denoted by tin is generally connected with the agent, while bhaia, as expressed by krt. is not similarly related to the agent (pacati gives the idea of an agent but pakah simply means the action, i. e., cooking). Words formed by a number of krt suffixes such as, tumun, ktvac.

रुखाविभक्तव्ययिषद्भवको भावसदा द्रव्यमिवीपल्स्य: ॥--Brhaddevata

¹ Mahabh sya under the rule Pan., सार्वधातुके यक्-3. 1. 67

प्रिम् विशेष, इत्सिहितस भावल तिङ्गिहितस सः। तिङ्गिहितस मार्गन साल्प्रसीपयक्ष प्रीम्प्यस्थ, इत्सिहितेन पुत्रने स्वयानी...तिङ्गिहितो भाव. क्यां नेप्युच्यते, इत्सिहितो भाव. क्यां नेप्युच्यते, इत्सिहितो पुत्रने समयुच्यते।—Mababbātya, Vol II, p 57, and क्षित्राधिनिश्चित्रयापत्रात इत्स्मान्दाभिहितो यदा ल्यात्।

namul, etc., are grammatically treated as indeclinable (avyaya). These forms, better known as avyaya-krt, denote bhāva as distinct from substance (asattvabhūta-bhāva) and have no regular number and gender. The verbal forms having $ktv\bar{a}$ and tumun are generally used as adjunct in relation to those that follow them. So far as the suffix $ktv\bar{a}$ is concerned, the two kriyās are related to each other, as both of them have got the same subject and stand to each other in order of priority and posteriority. On the authority of the rule Pān., 3. 3. 10, Nāgeśa holds that $t\bar{a}darthya$ as implying a purpose is also indicated by tumun. In accordance with this view, the expression Kṛṣṇam draṣtum yāti will mean one's movement for the purpose of seeing Krsna.

Mañjūṣā, Kṛdarthanirūpaṇam, pp. 1083-84.

CHAPTER VII

Kāraka

Kāraka—its definition—Śakts manifested as Kārakas different forms of Kārakas.

Closely connected with the meaning of case-terminations is the function of $K\bar{u}rakas$. $K\bar{u}raka$, as the very term implies, is intimately related to $Kriy\bar{u}$ or action. The idea of $K\bar{u}raka$ is dependent on that of $Kriy\bar{u}$. It is its relation with $Kriy\bar{u}$ that determines the nature of a $K\bar{u}raka$. $Kriy\bar{u}$, which plays so important a part in the determination of $K\bar{u}raka$, is, as Patanjaliz observes, denoted by roots and is invisible, formless and only comprehensible by means of inference.

Generally speaking, $Kriy\bar{a}$ means action $(vy\bar{a}p\bar{a}ra)$. $Kriy\bar{a}$ implies, some hold, action, effort $(krti\ or\ yatna)$ and result (phala). There is a peculiar combination of these three in the grammatical conception of $Kriy\bar{a}$. $Kriy\bar{a}$ is, after the grammarians, an action accompanied with effort and leading to the result. According to Udayana, the meaning of a root is

- ¹ क्रियां करोतौति कारकम् and क्रियाचयिलं कारकलम्।
- ² घालथे: क्रिया। क्रियावचनी घातु:। क्रिया नामयमव्यतापरिहटा · · सामावनुमानगर्या (~Mahâbhāṣya under the role Pāṇ., 1 3. 1.
 - ः यद एव क्रतिः पूर्वा, परिवान सेव भावना !— Kusumālijalı, Kār. 5. 8.

effort (yatna) producing an action. When this exertion is directed towards the production of the result, it is called bharana, as is denoted by the ākhyāta-suffix. Durga 1 has defined kriyā as what appears to possess both prior and posterior parts. The process of inference whereby $Kriy\bar{a}$ is usually comprehended has been clearly illustrated by Patanjali.2 Sometimes, when all the requisites of cooking, such as pot, fuel and fire, are actually present, we are not allowed to say pacati. until there is a particular effort indispensably necessary for the purpose. This sort of effort (sādhana) without which nothing is accomplished is called Kriyā.8 A Kriyā, like pacati, consists of many parts all of which, viewed as an undifferentiated whole, tend to produce the same result.2 From a grammatical point of view, pacati means a group of actions, namely, to place a pot on the fire-place, to set fire to, to throw fuel on and the like. As synonymous with īhā, yatna, etc., Kriyā comes within the scope of quality and as such pertains to things.

There are various agents (sādhana) whereby actions are generally performed; these agents, whether directly or indirectly related to action

[्]र जियत इति जिया सा स्पूर्वीपरीस्तावयदेव !—Under the rule Kalapa,

र्ष स्वेषु साधनेषु सिहितिषु सदासित् प्रस्तीलेत्रवित सदाचित्र भवति । —Mahābhāṣys under Pāṇ.. 1. 4. 23.

s टिक्नित् चाइने चिहिहिते पचतीत्वेतहवति सा नू किया।—Ibid.

^{*} गरम्तेरच्छे: चत्रः जनगदनाम् । इडग मनस्थितसिद: सा जिल्लेसभीयते ॥—Vākyapadīya.

(Krina), are grammatically called Karakas. There are, therefore, as many Karakas as there are sidhanas in relation to a particular action. In conformity with the interpretation of Durga, Kring is immaterial and formless : comes under our comprehension only through the medium of Karalas Krina. like auna, is an inherent property lying dormant in all things, but gets itself manifested when objects are in operation to produce some sort of result. As the action denoted by the verbal form patati comprehends four things. namely, tree, leaf, ground and wind, we have in such a cise us canana crksat parnam patati bhuman precisely four Karakas, according to their relation to the particular action (falling). The tree, for instance, which indicates the limit wherefrom the leaf falls down is called Anadana-Larala, the leaf that falls down and is thus primarily associated with the action is named hartr-loraka: the ground which forms the substratum of action is known as Adhilarana haraha, the wind that causes the leaf to fall is termed Karana-kāraka, or instrumental. The name of each Kāraha, as shown above, is thus suggestive of the relation in which a Karaka stands to a Kriya. Nagesa 2 has duelt at length on the definition of Kriya as suggested by

[े] चनुत्ता हि क्रिया निद्याली सा हि कारकैरभिव्यव्यासना कारक्रशीरे वसनी सवाने निष्ट्रम (---Nirukta p 88

[•] सवकारकाणां भाजध द्वयः (—Lagbumalijüşt p 514

Bhartrhari. He begins with the statement that all $K\bar{a}rakas$, as a rule, get themselves connected with $Kriy\bar{a}$.

Turning to the definition of the term Kāraka, we meet with considerable difficulty owing to the difference of views on the subject. First, the term Kāraka seems to have been too popular to deserve any definition; Pānini accordingly speaks of Kārake as only an adhikāra-sūtra. Patañjali takes the word $K\bar{a}rake$ as indicating a $samina^{1}$ and goes on to say that grammatical samiñās are generally made by such words as are popularly found to be denotative of sense.2 With the object of pointing out that the term Kāraka serves to indicate both samiñā samiñi, he has defined it in the following way: 'sādhakam nirvartakam kāraka-saminam bhavati,' means that an agent gets the desigwhich nation of Kāraka by virtue of performing some action. He has clearly shown the difficulty that becomes almost unavoidable, if the samifins are not specifically indicated by the samiñā. Patañjali takes $K\bar{a}raka$ as a $mah\bar{a}$ -samj $n\bar{a}$ with a view to show that the derivative meaning of the word (karotiti kārakam) is exactly harmonious

¹ किमिटं कारक इति ? संज्ञानिहेंग: |--Mahābhāşya under the rule Pāṇ., 1. 4. 23.

217

with what it usually signifies.¹ But we cannot take karotiti kārakam as an accurate definition of Kāraka from a grammatical point of view. To define Kāraka simply as 'what performs an action' will serve to exclude all Kārakas, excepting hartṛ-hāraka, from the category. As a matter of fact, it is kartā alone that acts as the direct agent, so far as the performance of action is concerned; but Kārakas like Karana and Adhikarana are only indirectly (i.e., through the agency of kartṛ) related to kriyā.

Patanjali next proceeds to show how Karana 2 and Adhikarana may also be used as kartī-kāraka consistently with the etymological signification of the word Kāraka. The meaning of the roots like pac seems to be different in relation to different Kārakas. We say Devadattah pacati when Devadatta is found to pour water in the pot, to throw fuel into the fire-place and so on. This is, so to speak, the instance where the main agent of action is treated as kartā. But kartītva is sometimes transferred to Karana and Adhikarana, as in kāshāni pacanti and sthālī pacati, respectively.

¹ महत्या: संज्ञाया: करण एतत् प्रयोजनमत्त्रवंशंचा यथा विज्ञायते, करोतीति कारकिति |---Mebabbayya under the rule 'Kārake'

 $^{^*}$ सिद्धः करणाधिकरणयोः कर्त्तुभावः ।—Ibid.

s पचादीनां हि प्रतिकारक किया भिदाते।—Ibid

^{*} एतत् प्रधानकर्त्तुः कर्तृत्वम् ।-- Ibid.

Under the rule Kalāpa, 221 (kār.), Durgasimha is found to have given a definition 1 (kriyānimittam Kārakam) which means 'Kāraka is-the cause of action.' This definition, we are told, is sanctioned by the popular usage. We have other definitions as well—kriyājanakatvam kārakatvam, kriyānvayitvam kārakatvam and so on. There is, however, some difficulty with regard to the definition as suggested by Durga, because the word nimitta, as synonymous with kāraņa, means cause and, consequently, it must have antecedence to kriyā.2 But in an instance of nirvarttya-karman such as, ghaṭam karoti 3 (making a pot), the pot is not logically supposed to have existence prior to the action, and, therefore, it is not strictly correct to take ghata as an example of karma-kāraku. Having raised this objection, Susena proceeds to support it by holding that the antecedence of the knowledge of pot is here attributed to the pot itself by a process of transference (upacāra).

Sambandha, though indirectly connected with $kriy\bar{a}$ as a remote cause of action, is grammatically excluded from the category of $K\bar{a}raka$, inasmuch as the term $K\bar{a}raka$ is used by the

¹ क्रियानिमित्तं कारकं लीकतः सिद्धम्।

² अन्यया सिद्धिय्चले सति नियतपूर्ववित्तिलम्।

[े] घटं करोतीत्वन निर्वर्त्वकर्मणः कथं क्रियानिमित्तवन् ? क्रियासिडी घटस्य नियतपूर्वनिर्त्त्वाभावात् । सत्यम् । क्रियासिडी घटज्ञानस्य पूर्वनिर्त्तितसिद्धवात्, घटस्यपि पूर्वनिर्त्तितमुपचय्येते दत्यदोषः ।—Kāraka, Kavirāja on the rule 221.

grammarians as a technical name 1 (rūdha-šabda) applicable only to six cases. The way in which Jagadisa has discussed the definition of Kāraka and specially the nature of sambandha deserves special consideration for logical accuracy. He defines Kāraka 2 as what is denoted by sup or case-endings and is apparently used as a qualifying attribute in relation to kriyā. As to the exclusion of sambandha from the category of Kāraka, he observes that neither sasthis (as expressive of relation) is regarded as a casetermination (Kūraka-vibhakti), nor is sambandha grammatically treated as a form of Kāraka, simply for the reason that sambandha does never directly qualify the action. Consequently, an expression like tandulasya pacati, directly connecting the verbal form with a word indicating sambandha, is not at all sanctioned by the popular usage. The word sesa, which is a grammatical name denoting sambandha, is an indication that sambandha is excluded from Kārakas as such. Instances like (i) durgatānām pratikurvīta, (ii) padmasyanukaroti, (iii) Lakşmīrupakurute paresam, etc., where the genitive is directly connected with Kriyā, present, so to speak, an

[े] सम्बन्ध्य क्रियानिमित्तवेऽपि पट्मु कारकशस्य दृद्वात् न कारकलिमिति संविद:—Kavizāje (Kalāpa).

[&]quot; धालधीं प्रकारी य: सुवधै: सीऽच कारकम्--Sabdasakti., Kar. 67. and क्रियाप्रकारीभूतीऽष्टै: कारकम् ।--Ibid.

[ै] सन्तरी न कारल न वा तदर्थिकापि पष्टी कारकविभिक्त: I—Ibid.

anomaly. Jagadīśa makes his way out by holding that the above instances, like $m\bar{a}tuh$ smarati, caurasya hinasti, are special cases where the genitive is optionally used (in place of $dvit\bar{\imath}y\bar{a}$) in connection with some particular verb, viz, the accusative of the verbal form karoti preceded by the Upasargas as prati, anu, upa getting $sasth\bar{\imath}$ instead of $dvit\bar{\imath}y\bar{a}$.

Reference is further made to such instances as dandena ghatah and bhūtale ghatah in order to show that the instrumental and the locative in these cases are not, from a strictly grammatical point of view, indicative of Kārākas, since they have no relation to $Kriy\bar{a}$. The primary condition of a Kāraka in general is to have a direct connection with Kriyā. Karana, as a class of Kāraka, is thus differentiated from hetu, for it has no necessary or indispensable connection with the action. But what has proved a stumbling block to Jagadiśa is an instance like mama pratibhāti, where the genitive seems to be irreconcilable with the verb. On the strength of such popular usage as sā me pratibhāti, we hold that the plausible view in support of these expressions and the like to comprehend certain words (idam or is

¹ क्रियाविशेषयोगे कारकार्थेव षष्ठी । प्रयोगदृष्या प्रत्यनूपेग्यः करोतेः कर्मण्यपि वैकल्पिकस्य षष्ठीविधेवैज्ञव्यत्वात् ।—Sabdasakti.

etad) agreeing with the verbal form pratibhāti and to explain the genitive in mama with reference to such words as sannidhau or sakāse understood.

While considering the different manifestations of Sakti or efficiency, we have seen that Sādhana which means an active agent in relation to an action also comes within the domain of Sakti.1 Having taken an extreme view of Sakti,2 some have tried to show that the entire universe is intrinsically made up of Sakti. 'How are we to know that it is Sakti and not dravua that is to be regarded as Sādhana? A thing is composed of a collection of Sakti. A ghata, for instance, is essentially a combination of such Sakti as the capacity for fetching water: a seed has the power of producing a sprout and so on. Thus, all objects are found to be efficient for performing some actions. As Sakti is sometimes discriminated from dravua, as a distinct entity, Bhartrhari understands Sādhana by Sakti, which is perceived to have direct association with actions. A thing, on the other hand, is not identified with Sādhana in accordance with this point of view, because a thing, limited as it is by its form, is not practically competent to perform all those diverse actions which naturally presuppose some kind of Sakti as the real active principle. Every

¹ क्रियाणामभिनिष्यत्ती सामर्थे साधनं विद:--Vākyapadīya, 3. 1.

यतिसातासमूचस वियसानेकधर्मण:—Ibid.

thing has its inborn Sakti that is manifested when it is at work. Sakti always comprehends things as its substratum, and consequently, it cannot have its existence independently of things. The relation in which Sakti stands to objects is one of co-inherence (samavāya). Having thus shown Sādhana as a form of all-pervading Sakti, Bhartrhari continues that Sakti is said to have six distinct but permanent divisions or forms corresponding to six Kārakas.2 A question may, however, arise here as to the precise number of Sakti, since Sakti appears to be numerous and diverse in its aspects, according things wherein it inheres are manifold and seem to be different from one another in several aspects. Bhartrhari takes recourse to the argument that a close examination of the various activities is sure to prove the reducibility of Sakti to six only. As an alternate view, it further suggested on the analogy of Kārakas, which, having either direct or indirect connection with actions, express but kartṛtva in its different aspects, that one and the same Sakti 3 may be said to have six different forms just in proportion to the number of causes that serve to manifest it. The point

¹ सर्वत्र सहजा शक्तियांबद्दव्यमवस्थिता।—Vākyapadiya. प्राययसम्बेताम्तु शक्तय: i—Helārāja.

[्]रै नित्याः षट् शक्तयः—Vākyapadīya, and द्रव्याकारादिभेदेन तायापरिमिता इव।

that deserves particular notice in this connexion is that the term Kāraka is, strictly speaking, applicable to kartr-kāraka alone, the other Kārakas (such as Karaņa, etc.) getting their particular designation only as indicative of the different aspects of kartrtva.

After dealing with the views with regard to both unity and diversity of Sakti, Bhartrhari next takes up the question whether Sakti2 is undifferentiated from things or has a distinct character of its own apart 'from the object. The grammarians, as Helārāja observes, are in favour of the latter point of view, as it is supported by both popular usage and grammar. Referring to the method of agreement and difference. Hari further attempts to strengthen his standpoint that Sakti, as represented by Kārakas, is virtually distinct from things. The burden of his arguments is as follows: as the meanings of caseterminations indicating Kārakas (Karaņa and -Adhikarana) in forms like vrksena and vrkse are actually different from those of the stem (vrksa), it is but reasonable to take Sakti as a distinct object of thought to which the grammatical term Kāraka is generally applied. It is almost incontestable that the standpoint

तस्ते वा व्यक्तिके वा व्यक्तिक तद्वाते—Vakyapadiya, 3. 88.

taken by the grammarians goes directly against that of the Naiyayikas who refuse to take Sakti as a separate entity. According to the Naiyāyikas, fire and the power of producing burning sensation (dāhikā-śakti) are not materially two distinct objects. They do not recognise any Sakti and the difference between possessing it (śaktimān). What we practically learn from a careful study of the various aspects of Sakti as such and what proves to be of vital importance from the grammatical point of view may be thus briefly summarised: Sādhana, which is only a name for Kāraka, is nothing but a form of Śakti, and, accordingly, Kārakas like Karman, Karana, etc., so far as they are denoted by particular caseendings, are only indicative of Sakti, or the power of performing actions as we may call it. over, a mere grammatical derivation of the Sādhana and Kāraka is sufficient to terms show that they are synonymous for all practical purposes and are expressive of Sakti, viz., efficiency or efficient object (if efficiency is held to be undifferentiated from the efficient object).

Gopīnātha, the well known commentator on the Kātantra-parisiṣṭa, has also elaborately dealt with the grammatical aspect of the problem. He seems to have arrived at the same conclusion, *i.e.*, identity of Sakti with $K\bar{a}raka$. The question is first

अय द्रव्यादयो वा द्रव्यादशक्तियो वा शक्तिमन्ती वा कारकाणि।—Parisista, Karakaprakaranam.

raised whether substance, quality, action, class, etc., or the potency inherent in them, or, things possessing such potency' are to be taken as Kārakas. Next, he proceeds to show that none of these standpoints are free from objections. The defect underlying the first view is as follows: if substance,1 quality, etc., which have their essential character, as is represented by the class, unalterable by nature, are identified with Karakas as such, we cannot possibly justify the instances2 like sthāli pacati, sthālyā pacati, sthālyām pacati, and sthalim pacati where one and the same substance (sthall) appears to be different so far as its connection with the action is concerned. Sthall pacati, for example, where sthall is used as the direct active agent, is distinguished from sthalua pacati where sthali is no longer karta but only an instrument of action (cooking). But as a matter of fact, sthall, as is conditioned by its essential aspect (sthalltra), is one and knows no diversity at all. The second view is also untenable, for if it were so (i.e., if only activities of things were Kārakas), it would be unjustifiable to use the term Karaka with direct reference to things t (as we take rrken to be an instance of Apādana-kāraka in vīksāt parņam patati).

३ न दिसीय: । इचादावपादानादि-कारकव्यवद्वादिश्वोपादमी:—Pariéisţa, Karaka.

The third one is also open to criticism on the ground that Sakti can neither be taken as an attributive (viścsana), nor as an upalaksana (characteristic) with regard to things, the former giving rise to mere prolixity and the latter rendering the assumption of Sakti entirely futile. Having thus shown the untenable features of the above-mentioned standpoints, Gopīnātha then puts forward his own views. Kāraka,2 he holds, is the same as Sakti, which is supposed to have different forms; substance, etc., are to be understood as the substratum of such divergent Sakti. As to the application of the term kāraka to a thing like vrksa, etc., Gopinatha explicitly states that it is simply to imply the non-difference between Sakti and the object possessing Sakti that things are popularly comprehended by Kārakas.

He has further raised an important point. There is, strictly speaking, no such rigid principle as to restrict the use of certain $K\bar{a}rakas$ to particular things, because the subjective element, such as the intention of the speaker, appears to be a prominent factor that often regulates the use of $K\bar{a}rakas$. Thus one and the same thing, such as asi (sword) may be either used as $kart\bar{a}$ or karana, according as the

¹ न हतीय:। विकल्पासहलात्। तथा हि शक्तिमतः कारकत्वे शक्तिविशिषण-सुपलचणं वा।—Parisiste.

—Ibid.

speaker intends to imply by the operation of the active agent or that of the instrumental (asischinatti and asinā chinatti) with regard to the action (cutting).

A word is only needed to ascertain the precise number of Kārakas. Hari has referred to six manifestations of Sakli corresponding to the six Kārakas. Sakti is essentially one and indivisible. It is avidyā or falsity that makes it look like different. The ultimate unity of Sakti 1 is only cognisable on the disappearance of avidyā. The whole world with all its diversities is only a materialised image of the infinite cit-šakti. Viewed from a transcendental standpoint, the so-called division of the world as external and internal has no real meaning. The word Kāraka, as used in grammar, seems to be an underivable one (avyutpanna-śabda) 2 that is restricted to the neuter gender only. That Kārakas are six in number requires no further explanation. But Gopinatha seems to have shown some ingenuity in pointing out the possibility of reducing this number to five and ultimately to two only. Kārakas, he suggests, · may be divided into five classes, according as

¹ षवियायवहारदगायां प्रयक्षेन प्रकाशते, षविदावित्वये तिकलेन प्रकाशते इति नोडच्यम् ।—Helārāja, under the Vākyapadiya, Kār. 8, 89.

[ै] कारकशस्त्रीऽयमव्यृत्पन्नी निमित्तपर्याय: स्वभावात्रपु सक्तिकृष्य—Pabjl (Kalāpa) on the role 231 (Kāraka).

they are represented by substance, quality, action, class and the essential property. They may, again, fall under two categories, viz. svašabdavācya and parašabda-vācya, as they are denoted by their respective technical terms or by some other words.

Of all Sādhanas, kartr-kāraka or the nominative case is taken up first, as one having direct connection with the action. Considering all those qualities that go to constitute a Kāraka, kartṛkāraka alone seems to be primarily connected with $kriy\bar{a}$, and as such, is the $k\bar{a}raka$ par excellence. The aphorism of Panini defining kartykāraka lays much stress on the independent character (svātantrya) of kartr by virtue of which the agent is distinguished from the rest. Patanjali expressly takes the word svatantra as an equivalent of pradhana and explains such prādhānya with reference to the characteristic non-dependence of the agent on any accessories, so far as the performance of an action is concerned. It is to be particularly noticed 1 that cases like Karana and Adhikarana are but auxiliaries that bring about the completion of the action under the direct operation of the subject. The agent, on the other hand, is not similarly subservient to those instruments of actions in the strict sense of the term. This is why $kart\bar{a}$ is called svatantraor self-dependent in opposition to the rest, that

[🕽] करणादीनां तु कर्नुविनियोगादेव खव्यापारे खातन्त्राम्।—Helārāja on Vakya., 3. 99.

are more or less paratantra or dependent on Patanjali has referred to both the agent. scatantra and paratantra and rightly observes that the entire question of dependence and independence is practically based upon the intention of the speaker.1 Thus, as a matter of fact, one and the same object may be treated either as the limit of separation (aradhi, i.c., Apādāna) or as the agent of action (valāhakāt viduotate and valāhako vidyotate2). We now draw an example from common experience. Just as the representatives of a king appear to be subordinate in the presence of their king, though they are independent for all practical purposes when they work independently of the king in their respective spheres of activities, so sthālī may be taken either as svatantra or paratantra according as it is intended to be spoken of either as pradhana or merely as an auxiliary in relation to the action. Vivakṣā or the intention of the speaker being thus an important factor that determines the nature of a Kāraka, we are allowed to use the word sthālī, for instance, as Kartā, Karma, Karana, and Adhikarana. From what we have seen above, it is sufficiently clear that in view of the preponderance of rivaksā, the word svatantra in the rule svatantrah kartā should be taken as

² सर्वेप्नेवाव खातन्त्रा' पारतन्त्रा' च विविधतम्-Mahābhāşya, Vol I, p. 825.

 326.

implying vivaksita-svātantrya, as opposed to the inherent or natural non-dependence. When the speaker, Bhattoji says, intends to transfer the usual operation of the agent to Kārakas other than the agent, it is not unlikely that cases like Karana, and Adhikarana may be grammatically used as Kartā having svātantrya in their respective functions. How are we to understand the super-independence of Kartr? 2 The answer is not far to seek. It is a matter of ordinary experience that even when all the requisites (fuel, utensils, water, fire. etc.) for cooking are brought together, we are not practically allowed to say pacati, i.e., 'cooking is going on,' unless and This is an indication until the cook is at work. that accessories of action, such as are represented by Karana and Adhikarana, etc., have to depend on the agent so far as regards the completion of the action. Though there is no contention regarding the independence of the agent, we should not lose sight of the fact that cases like Karana, etc., have an independent aspect also, so far as their respective efficiency is concerned. Wherein, then, lies the superiority of the subject?3 The

यदा सीकर्यातिगयं योतियतं कर्तिर कर्त्व्यापारी न विवच्यते तदा कारकाना-राणि नर्ट संज्ञां लभने खव्यापारे खतन्त्रलात — Siddhanta Kaumudi. Bhasya has—स्थाली पचतीति अधिकरणस्य कर्द्धं लम्, काष्ट्रानि पचन्तीति करणस्य कर्द्धं लम् Mahābhāṣya, Vol. I, p. 825, and पर्याप्त करणाधिकरणयी: कर्नुभाव:-Mahābhāşya.

[ै] करणादीनामपि खव्यापारे खातन्त्रात् कीऽतिशयः कर्तुः ?—Helārāja.

subject has certain special features or properties, as are clearly shown by Hari, which serve to distinguish it from other Karakas. As an efficient cause of action by itself, the agent does not derive its specific function from any other accessories whatsoever, but renders such instruments only subscryient to its operation. The socalled independence of cases like Karana and Adhikarana is only borrowed from that of the agent: the accessories are employed by the agent desirous of attaining the accomplishment of action, and their functions are liable to be stopped as soon as the agent ceases to work. The supreme independence of the agent is also clear from the fact that the agent, like Karana, etc., cannot have a substitute without a change of action. Moreover, the agent is allowed to have its operation unimpaired even when no other instrument of action is sought for, but the reverse of the case is impossible, that is to say, Karana, etc., are not competent to accomplish the action independently of the agent. Helārāja 3 makes an important observation here. He says that the independence of the agent is

¹ प्रान्यतः प्रक्रिलाभात् न्यन्भावापादनादपि । तदशीनप्रशक्तिवात् प्रश्नतीमां निवर्तनात् । श्रष्टच्लात् प्रतिनिधः प्रविषेके च दर्धनात् । षागदप्युपकारित्वे द्यातन्त्राः कर्तृद्यति :—Vakyapadiya, 3. 99-100.

so prominent that the instrumental or *Karana*, though more closely connected with the action than the agent itself, is not popularly designated as such.

While independence (svātantrya) is explained with such a breadth of implication and the agent made a repository of so many properties,1 we can hardly preclude the apprehension as to how inanimate objects such as agni and ratha in agnih dahati, ratho gacchati, etc., can legitimately be taken as the agents. Bhartrhari seems to have his answer ready. It does not necessarily follow, he says, that possessing those properties are only capable of being regarded as agents, but what is plausible from a grammatical point of view is that anything, whether animate or inanimate. may be used as the agent, only if such properties are verbally attributed to the object in question.² It is from the use of words that the agent is comprehended. It does not matter much if such grammatical agents are found to have no innate relation with those properties which are usually ascribed to them. Further, as a system of study entirely devoted to words and their popular signification, grammar does not care so much for strict adherence to reality or

¹ धर्मेरस्युदितै: प्रच्दे नियमी न तु वस्तुनि। कार्तुर्धर्मविवचायां प्रच्दात् कार्ता प्रतीयते ॥—Vakyapadiya, 3. 101.

भन्देन यस्वैते घर्ना: प्रत्याय्यन्ते स कर्ता—Helārāja.

agreement of thought with truth, but takes words and then meanings as they are popularly used. The real factor that accounts for such transference of properties to manimate objects, is, as we have already pointed out, the desire of the speaker himself. As the independence of the agent is a matter of ittalea, one and the same thing (as the soul) may be used, as in the example atmanamatmana hanti, either as the subject, the object, or the instrumental. Under the Varttika, atma-samuoge lai malartuh larmadarsanat, Pataniali has clearly shown how one and the same soul may become both the subject and the object (atmatmanam hanti) according to the desire of the speaker. The differentiation of the soul, as in such a case, is far from being real, but is only comprehended by different forms of the word (ātmānam, ātmanā und ātmā) As there is hardly any contention regarding the unity of the soul, of course from the Vedanta standpoint, we are justified to raise the question what destroys the soul and what is really destroyed by the soul 2 It is curious to note how Patanjali has advanced arguments in support of the duality of the soul Self has, he holds, two distinct forms,8 namely, corporal soul (sarratmā) and intellectual

[े] न तु बस्तुविषयस्या घर्माणांमयां सक्षवीदन्तेषणीय । येनापेसनिविषयेऽ सिर्देशत नदी पहतीत्यादी च कर्तृत्वं न स्थात् ।—Helaraja

soul (antarātmā); the corporal soul performs those actions whereby the intellectual soul enjoys either pleasure or pain and vice versa. Kaiyaṭa's observation on this point: difference of souls is here actually meant and not the agency and objectivity of one and the same soul. According to the Sāṃkhya system, antarātman is the same as (antaḥkaraṇa) intellect, which is said to be active; the Naiyāyikas, on the contrary, take puruṣa to be antarātmā on account of its being the active agent, unlike the puruṣa of the Sāṃkhyaites.

The instance ankuro jāyate (a sprout is growing) presents another difficulty. There is much controversy regarding the question whether it is really existent (sat) or non-existent (asat) that comes into being. This question, as is well known, embodies the first philosophical enquiry about the genesis of the universe that had early engaged the attention of the Vedic Rsis in the remotest period of the intellectual history of mankind.

The reference is to the well-known $Sat-v\bar{a}da$ and $Asat-v\bar{a}da$. According to the $Sat-v\bar{a}dins$, it is sat or something having existence that is produced $(sadeva\ j\bar{a}yate)$; the $Asat-v\bar{a}dins$ hold, on the contrary, that it is asat

¹ वस्त एवानात्मभेदो न लेकस्यैव कर्मलं कर्तृतं च। सांख्यपचे अन्त:करणः मन्तरात्मा तस्येव कर्तृतात्। पुरुषस्याकर्तृतात्। नैयायिकादीनां मते तु पुरुषस्य रेतृतात् स एवान्तरात्मिति विवचित: ।—Kaiyaṭa on the Bhāṣya.

[े] चहा दृदमग त्रामीत्, त्रसहा दृदमग त्रामीत्।—(Cf. Nasadiya Sūkta) Taittirīyopanişad, 2. 7.

that comes into existence. A thing seems to be non-existent before it is actually produced. This kind of non-existence is called prāgabhāra by the Naiyāyikas. Again, what is sat is not liable to destruction, and it is equally true that nothing comes out of nothing. Sat is one of the three aspects with which Brahman is usually conceived by the Vedāntins. Asat or abhāva² is also maintained to be the ultimate cause or final principle by a section of the Buddhist philosophers.

The sprout is found to have no existence before it grows;3 and it is not therefore strictly correct to assume a non-existent thing as the agent of the verb jayate. To get rid of this difficulty we should either explain the production of the sprout on the assumption of existence however unreal, or depend entirely on the desire of the speaker as what accounts for such transference of existence. Moreover, the word 'sprout' is used in like instances by the speaker, as if the sprout were already existent. The order in which the six bhavavikaras have been arranged by Vārsyāyani evidently shows that asti presupposes jayate, i.e., a thing cannot be said to be existent before it is produced. But it does not strictly represent a correct view.

[·] नासती विद्यति भावी नाभावी विद्यति सत: 1-Gits, 2. 16.

भाषाहावीत्पत्तिनांतृपस्य पादुर्भावात् ।—Nyāya Būtra, 4. 1. 14. धमाबाहावी नायत इति कस्यचिद्दर्भनम् ।—Nyāya-vārttika.

[•] न हाजातीऽसीताचते (--Darga, under Nirukta, p. 45.

In course of explaining the expression $j\bar{a}yata$ iti pūrvabhāvasyādimācaṣṭe, Durga does not fail to observe that jāyate also comprehends existence.1 The reason is quite obvious. A thing that is nonexistent is not capable of being produced. We can, however, assume a causal connection that serially links one bhāva with another. ultimate reality $(bh\bar{a}va)$ is the final cause of which these vikāras are only different manifestations. There is only one bhava or satta that permeates through the entire sphere of existence. Kriyā implies an action having both prior and posterior stages. Paurvāparya is to be understood with relation to time and space. Prajati means accordingly a collection of actions all tending to produce the same result (conjunction with a particular space). Jāyate and asti, viparinamate and vardhate and the like are all related to each other. A thing first comes into being and is then said to be existent and so forth. Having shown their mutual relation, Durga concludes with the remark that jāyate means only production 2 and not the next stage (existence), which invariably comes in association with the idea of jāyate.

According to the Buddhist philosophers,³ a kāraņa has to destroy itself before it can bring into existence a kārya. The sprout is

[ं] न एतिश्वामी जायते ।—Durgh under Nirukta, p. 45

[ै] जायमे इत्येष शब्दी सभीव देशने बहीति।—JUA-

^{ें} र विभागिमदे जारी कारीमृत्यान प्रति।—Nybya-varttika uneer

found to grow only when the seed is destroyed. As long as a seed remains a seed, there does not grow a sprout as such. The destruction of the seed is, therefore, the immediate cause that gives rise to a sprout. What we gather from this trend of arguments is that a sprout grows from non-existence of the seed 2 (abhāva). As it seeks to trace the origin of all things to a huge nothingness or nihilism, this view was rejected by all orthodox teachers.

The Naiyāyikas argue in the following way: it is really out of a seed and not out of its final destruction that a sprout is produced.3 A change of physical composition is brought about in a seed when it is about to give birth to a sprout, The seed is not essentially destroyed but some cells are developed in it wherefrom the sprout is formed.' The seed is, therefore, to be considered as the material cause of a sprout. Here the agency is to be understood as pertaining to Larya, i.e., what is produced (sprout). sprout is supposed to have intellectual existence before it is actually produced. As a matter of fact, the material existence of the sprout before it is actually produced is contrary to all experience; but it must be admitted that the

¹ बीजविनाभोऽद्धरकारणमिति (—Nyāya.vārttika

अधावाहावी सामते।—Ibid

एवं च बीजीपादान युक्तम्।—Ibid.

वीजावयवानां पूर्वव्यूहिनवृत्ती व्यूहिनवित्ती
 प्राविभवतीति।—Ibid

solution suggested by the grammarians refers more to the use of words than to the actual state of things. The grammarians have repeatedly drawn our attention to the fact that they unhesitatingly take the meaning usually denoted by a word as its real signification and do not insist upon the material validity of such meanings. Here the science of grammar bears close comparison with the deductive logic which, as we know, is more or less concerned with the formal side of the proposition (as opposed to the material truth). An expression like golden mountain, though the material existence of what it denotes is really questionable, does not practically lie beyond the scope of the deductive logic.

Bhartrhari seems to have approached this question from a different point of view. It is shown with reference to the Vrttacaryā how the cause is changed into the effect and is said to be jāyate in the shape of kārya. He seeks to establish the non-difference 2 between the cause and the effect as well as between prakrti and vikrti (substance and its modification). This is another problem of much philosophical importance to decide whether it is the cause or the effect that is to be considered as sat. Some hold, as the

¹ व्याकरणे हि शब्दार्थोंऽर्थ:—Helārāja.

[े] कारणं कार्यभाविन यदा वा व्यवतिष्ठते। कार्यभ्रब्दं तदा लच्चा कार्यलेनाथ जायते॥ Vākyapadīya, 3. 104. Helārāja has the following:—पिरणाम-दर्भने लभेदपन इदं काष्यते। कार्यकारणयो: प्रक्षतिविकारकपतया चीरं दिध सम्पदाते, वीजमङ्क्षरो जायते इत्यभेदीन व्यवहारादिकस्थाध्यवस्थातुरवस्थाविभेषस्वीकरणमावं खतन्तमिति।

Naivāyikas, the cause to be sat and look upon the effect as essentially different from it (asat). The Sāmkhyaites take the effect to be real (sat), i.e., as what represents the cause only in a changed form. According to this view, kāraņa and kārya are the same as prakṛti and vikṛti. In contradiction with the view that an effect is virtually different from its cause. Hari maintains identity between kārya and kārana and prakrti and vikrti on the ground of such instances as 'milk is turned into butter,' and 'the seed is transformed into a sprout' in order to show that the cause and the effect are not distinct entities, but represent only different phases of one and the same object. In accordance with this standpoint, the expression 'a sprout is growing' should necessarily imply that the cause which has existence is what gets transformed (in the form of $k\bar{a}rya$) at a later time. This explanation seems to be based on the so-called parināma-vāda as expounded by the Samkhyaites.

Referring to the difference of the cause and the effect, Bhartphari has attempted to show how ankura may be viewed as the agent. It is an indisputable fact that the sprout, as an individual (vyakti), cannot be supposed to have existence before it is produced; but it is equally true, we must admit, that the sprout,

¹ कार्यकारपर्योभेदरादेशिप बासनेन घरेण जनिकहैलनाए।—Helaraja, विभक्तियोनि यत् कापि कारचेश्वः प्रवर्तते । खा जातिव्येतिवयेष तथापि व्यवशिष्ठते ॥—Vakyapadya, 106, and जातिवयेण कर्तृत्वं व्यक्तिवयेष जनाविमित। —Helarais

viewed as a class, is comprehended to have perpetual existence (cf. the Nyāya conception an eternal entity). What we of class as learn from Bhartrhari and Helārāja regarding this point is that the sprout (a sprout is growing) appears to be the agent when taken as a class, and that it is said to be a product when it is viewed as an individual. The agent and the object that grows are, according to this interpretation, not different from each other, the former representing a class, and the latter representing an individual. The seed develops into a sprout or assumes a formal change in the shape of an effect. Moreover, the class and the individual being mutually dependent, we are not justified in taking one as distinct from the other.

The discussion on such a nice point does not, however, end here, but has practically given rise to a far more complicated question. It is really difficult to say whether prakrti or vikṛti should be taken as the agent of production, because there is no consensus of opinions with regard to this problem. A careful examination of facts, it must be remembered, goes to show that both the cause and the effect might be treated as the agent according to the nature of vivakṣā. In an instance like 'milk is turned

प्रज्ञति-विक्ततिविषयपर्यायतः कर्तृत्वं कार्रकारणयोः प्रयोगमेदिन ।

[—]Helārāja.

विकारी जन्मन: कार्ता प्रकृतिवेति संभयी। भिद्यते प्रतिपत्तृणां दर्भने लिङ्ग-दर्भने: ॥—-Vākyapadīya, 3. 112.

into curd '(ksīram dadhi sampadyate) we find that the relation in which prakṛti stands to vikṛti is one of co-inherence (sāmānādhikaranya). An expression like bijamankuro jāyate is sanctioned only to show the non-difference between kārana and kārya or prakṛti and vikṛti. A sprout is not materially different from the seed wherefrom it grows; it is only an aspect of the seed or development from a crude form into a bulky one. Ankuro jāyate, therefore, means that the cause (seed) which is sat gets a new life (janman) or reveals itself in the form of a sprout. Now there arises a doubt as to which of them is predominant in relation to the other. It is necessary to find out the dominant one, as it is dominant or pradhana alone that is to be regarded as the agent in connection with the verbal form. There are practically two different views, namely, one supporting the agency or kartriva in favour of vikrti, and the other upholding the agency of prakrti. Vikrti1 comes to be regarded as the agent, when there is absence of co-inherence and the words denoting prakrti and · vikṛti are found to have different case-endings (as in bijāt ankuro jāyate). The rule janikartuh prakrtih, Pan. 1.4. 30, which undoubtedly ascribes the agency to vikṛti, may be explained here to show not only the formal but also the material difference between prakrti and

भे भेदविबचाया तु जिभिकर्तुः प्रकृतिरित्यपादानपञ्चम्येवात्र कारकविभक्तिः । भभेदविबचाया तु चतुर्ण्या चवनामः...विकारसः कर्तृत्वावसायः.—Helaraja.

The agency of vikāra is also clearly out by such expression as mūtrāya sampadyate yavāgūli, i.e., mūtram jāyate. What is deducible from these popular instances of grammar 1 is that vikāra is directly connected with the action, and, consequently, treated as the agent; and that prakṛti has only indirect connection with the action and is generally used in the ablative case in order to prominently bring The expression 2 out its difference from vikāra. suvarņapiņdaļi kuņdale bhavataļi, where number of the verbal form agrees with that of vikāra, serves to strengthen the view that vikāra alone should be used as the agent. But examples are not, however, wanting to show also the agency of prakrti. The expressions sanghībhavanti Brāhmanāh and atvam tvam sampadyate clearly indicate how prakrti is used as the subject. Now is almost clear that both praketi and vikāra are entitled to be regarded as the subject, according to the nature of the examples.3

The discussion on Kārakas in general, and kartṛ-kāraka in particular, will be hardly complete and exhaustive without an adequate reference to the logical method of interpretation. The Naiyāyikas, specially the followers of the Navya-nyāya, such as Jagadīśa and Gadādhara, have supplemented the study of grammar in a

Helārāja.

 $^{^{}f 1}$ यवागूर्मृत्रं जायते—प्रकृतेरत्र विकारद्वारेण क्रियासमन्वयो न साचात्।

² Mahābhāṣya, 1. 1. 1, Vol. I, p. 7.

⁸ Vākyapadīya, Kārikās, 3. 114-115.

largo measure; they have dealt with the problems of grammar in their characteristic fashion with the result that niceties of an incomprehensible nature were sometimes allowed to mar the perspicuity of the subject to such a degree that the study of grammar ultimately passed through a completely different channel at their hands.

To do full justice to their labour, it must be said, however, that they have practically given, as it were, the finishing touch to the interpretation of certain problems of grammar and have undoubtedly shown a new line of thinking and approaching a problem The advent of the Navya-nyaya, with its characteristic tendency to abstructies and a peculiar stock of technical terms, opened the portal of a new realm of thought which has more or less influenced all later philosophical speculations. This influence, as is quite evident, is nowhere so prominent, as in the case of later commentaries on philosophical treatises and grammar. The last phase of grammatical literature, both in language and mode of interpretation, seems to have been moulded by this process of thinking. Such well-known grammarians, as Nāgeša, Bhattoji, Kondabhatta, Durgasinha, Gopinatha, Susena and others, are supposed to have been thoroughly acquainted with the Navya-nyaya line of arguments.

As the logical method of definition is free from all defects and scientifically accurate, the grammarians have conveniently followed it in forming the definitions of grammatical categories and concepts with the obvious object of getting rid of the so-called ativyāpti and avyāpti. How far the grammarians have assimilated and absorbed this particular process of thinking and the line of arguments is borne testimony to by the fact that if any modern grammarian is asked to give an accurate definition of Karma-kāraka, he would not possibly say karturīpsitatamam karma or yat kriyate tat karma, but would give his answer in the strictly logical form, i.e., kriyājanya-phala-śālitvam karmatvam and so on. Jagadīśa's Śabdaśaktiprakāśikā and Gadādhara's Vyutpattivāda are two inportant works that give us purely logical interpretation of the grammatical problems; Durga and Suṣeṇa (two well-known commentators on the Kātantra system) have also dealt with the problems of grammar from a strictly logical point of view.

The logical definition of kartrtva is $kriy\bar{a}$ śrayatvam kartrtvam, i.e., the agent is the substratum of action. This is based on the assumption that the action is generally denoted by the root, and the idea of a substratum follows from the suffix tip. As this definition is likely to prove the agency of time also which is the final substratum of the world $(k\bar{a}lo\ hi\ jagad\bar{a}-dh\bar{a}rah)$, Suṣeṇa has made some improvement

¹ प्राधान्येन धातुवाच्यव्यापारवत्त्वम्—Durga (Kalāpa-Ṭikā) and धातूपात्त-व्यापारायय: वर्ता ।

² कालसापि कर्तृतं सात् तस्य सर्वीश्ययत्वेन क्रियाया अप्याश्ययत्वात्— Kavirāja under the rule 220 (Kalāpa).

oy adding prādhānyena to the aforesaid definition. The state of being a substratum of action is not a correct definition from a grammatical point of view. If so, the objective case, affected as it is by the action, may also be treated as kartā. The definition finally suggested by Susena is as follows: pradhanyena dhatuvācyavyāpār avattvam (karta is the main substratum of action as is denoted by a root)

To show an instance how the logical process of arguments has its application in grammar, we give below the summary of a discussion on the definition of Kartz-Luraka There arises some difficulty with regard to the definition of kantriva as given by Saivavarman (yah kanoti sa karta, Kalapa 220), because this rule is strictly speaking, applicable to such instances as ghato bhavati, etc (the pot does not do anything but is simply brought into existence by the agency of the potter) The logical definition is not even sufficient to solve this anomaly, masmuch as the adjunct ki masi avatvam is equally applicable to Kartr and Adhikarana It is, therefore, necessary to add the expression saksat sambandhena (by direct association) to the above definition in order to differentiate Kartz Laraka from Adhikarana The reason is that both the agent and Adhiharana are used as the substra tum of the action (kr vyāsr aya), the difference lies in the fact that the subject is directly or primari ly connected with the action, while Adhikar and has only indirect association with the action

(through the operation of the agent). But the train of arguments and counter-arguments does not end here. The additions of sākṣāt sambandhena is not, however, sufficient to make the point clear, because in an instance like gale baddhvā gaurnīyate, the locative is found to have been the direct substratum of action (binding). Now it is necessary to make further addition to the definition (ananya-prayojyatva) for the purpose of eliminating both ativyāpti and avyāpti. The special characteristic, which serves to distinguish the subject from the cognate cases, like Karana and Adhikarana, is the super-independence 2 of the agent, i.e., the agent is capable of accomplishing the action without depending on the so-called accessories.3 agent presents itself in three forms, namely, śuddha, prayojaka or hetu, and karmakartā.

Both Karana and Adhikarana are intimately related to the agent; they help the agent in the accomplishment of the action. In accordance with the definition of Pāṇini, Karana is held to be the most important or indispensable of all accessories that help the agent in bringing about a completion of the action.

[े] कर्ता लनन्यप्रयोज्य: खतन्त इत्युच्यते... फालकामो हि कर्ता करणादीनुपार्जयते, तथा च पूर्वभेव शिक्तमान् खतन्त्र:, करणादीनां तु कर्तृविनियोगादेव खातन्त्र्यम् — Helārāja.

² कारकचम्राव्यापारप्रतिवन्धकीभृतव्यापाराभाववन्तं स्ततन्त्रत्विमिति।—Kavi-rāja (Kalāpa).

³ खतन्तलं च कारकान्तरानघीनले सति कारकलम।—Ibid.

Pataniali in his characteristic fashion has anticipated certain objections against the desirability of retaining the suffix taman after the word sadhila in sadhalalaman laranam If Karana is said to be, Patanjali argues, merely an accessory and not the most important one, the undesirable consequence will be that all Rārahas, by virtue of their direct or indirect association with the action, will be entitled to receive the designation of Karana 1 It needs hardly be pointed out that all Karakas, as the very term implies, are practically so many accessories (sadhahas) with reference to the accomplishment of the action The use of taman (superlative degree) is not therefore meaningless, because it serves to differentiate Karana from other Karakas Again, it may be further argued that the sense usually conveyed by the suffix (atisayya) ie, excessivenesa, is also comprehensible even in the absence of that word We can justify this point of view by an illustration drawn from popular experience As, for instruce, when one says 'a daughter 2 should be given in marriage to a handsome person. what we accessarily understand is that the person spoken of should be 'perfectly handsome' (abhir upatama), though the word denoting excess or super-excellence is not explioitly mentioned Similarly, the word sadhaha

¹ सर्वेषां कारकार्णां करणसभा प्रसन्धेत And सर्वोषा हि कारकाणि साधकानि—Mahābbāsya under the rule Pān 1 4 42

चिमद्याय क्या देया तत्राभिद्यत्तमायेति गम्यते — Ibid

might be alone sufficient to denote as much meaning as is usually expressed by sādhakatama. Now what follows from this discussion is that the suffix tamap is redundant. The rule sādhakatamam karanam might be reduced to sādhakam karanam without any alteration of the meaning. But it cannot be denied that Pānini had some particular object in view so far as the use of this suffix is concerned. What Pāṇini 1 likes to indicate by the use of tamap is that the suffixes (denoting degrees of excellence) tarap and tamap should have no application in the rules defining Kāraka-samjñās, or, in other words, the Paribhāsā (gauna-mukhyayormukhye kāryasampratyayah) should have its application restricted to this rule and not to any other rules belonging to the section of Kāraka. This is why the grammarians do not insist upon apāya or physical separation alone (according to the strict interpretation of the rule), but also acknowledge the validity of intellectual separation (buddhikṛtāpāya) in the determination of Apādāna.2 Similarly, the rule ādhāro'dhikaraṇam is not only applicable to tileşu tailam, but comprises such instances also where the entire substratum is not pervaded by the thing inherent.3

¹ कारकसंज्ञायां तर-तसयोगो न भवतीत्यचापि सिर्ड भवति—Mahabbaşya, under the rule Pāṇ., 1. 4. 42.

[ं] सांकाश्यक्षेस्य: पाटलीपुतका त्रसिरूपतरा: ।

⁸ गङ्गायां घोष:, कूपे गरीकुलस्।

यत क्षत्त आधारात्मा व्याप्ती भवति। तिनेहिव स्थात् तिलेषु तैलं दिधि सिपिरिति। गङ्गायां गावः, कूपे गर्भकुलिमित्यव न स्थात्।—Mahābhāṣya, under the rule 1.4.42.

Wherein lies the superiority or relative importance of Karana? Those that help the agent in the accomplishment of the action are grammatically called upakāraka; of all such upakārahas, Karana is decidedly the most indispensable accessory that comes in close contact with the agent (sannipatyopakāri) in course of operation. The relative superiority of Karana is mainly due to the fact, says Bhartrhari,2 that the accomplishment of the action actually takes place immediately after the operation of Karana. The part played by vivaksā or the desire of the speaker in the use and determination of Kārakas in general has already been referred to. Bhartrhari s emphatically lavs down with special reference to the Instrumental case that it is not possible to say (with regard to a thing) that this is always Karana and this is not, as if it were fixed by the rules of grammar. It is the desire of the speaker that practically accounts for the use; as, for instance, one and the same thing (as sthālī) might be used both as the substratum (sthālyām pacati), and as the instrumental (sthālyā pacati) according to the desire of the speaker.

यद्यपि क्रिशिचित्रौ बहूनि साधनानि व्याप्रियले तथापि यत् प्रक्रशिपकारक-भनारद्वे विविचतं तथ्व करणमिल्ययं ।

[°] क्रियायाः परिनियत्तिर्धेद्यापारादनन्तरम्। विवस्यते यदा तत्र करणल तदा सूतम्।—Vākyapadiya, 3.89

[े] वस्तुतस्तरितर्रेग्य न हि वस्तु व्यवस्थितम्। स्यान्या पणतः द्वयेषा विश्वचा हम्यते यतः ॥—Vakyapadiya, 3 90.

In accordance with the definition as suggested by the Naiyāyikas, Karaņa is the same as $K\bar{a}rana$ (vyāpāravat kāraņam karaņam) only with this difference that karana is closely associated with the action, i.e., cause, when it is actually in operation to bring about the accomplishment of the action, is what is called karana in grammar. Gadādhara maintains that the words kartrvyāpārādhīnatva should be added to the above definition (vyāpāravat kāraņam karaņam) so as to clearly indicate the subserviency of Karana to the agent. An accessory (as Karana), as we find, cannot accomplish the action unless and until it is set to work by the agent (kartyviniyoga). This being the actual state of things, one may possibly bring forward the argument that it is more plausible to attribute the adjunct sādhakatama to the agent itself in preference to Karana.1 Bhartrhari 2 meets this objection by saying that the primary function of the agent is to employ the accessories to operation 3 which, thus engaged, immediately accomplish the action. This is to show how Karana comes between the agent and the action, and, consequently, has greater proximity to theoperation than the agent itself.

[ं] कर्त्विनियोगोत्तरकाले साधनानां प्रहत्तेसदपेचया कर्त्रेव साधकतमलं न्यायमिति—Helaraja.

² खातन्त्रेऽपि प्रयोक्तारमारादिवीपकुर्वते। करणेन हि सर्वेषां व्यापारी व्यवधीयते॥—Vākyapadīya, 8.98.

^३ विनियोगो हि कर्तृत्यापार:।

Now it is sufficiently clear why Karana is said to be sādhakatama in relation to other accessories. Bhartrhari has again alluded to the preponderance of vivakṣā and the difference between the agent and Karana by referring to the example asiśchinatti (where the function of the agent has been attributed to the instrumental, viz., sword, with a view to indicate the independent activity or excessive power for accomplishing the action on the part of Karana). In the above example, it should be noted, the sharpness of the sword comes to be regarded as Karana when the sword itself is used as the agent.

Though apparently synonymous, hetu and Karana are, however, distinguished by the grammarians, the criterion of such difference being the invariable association with the action on the part of Karana. The first and foremost thing necessary for a Kāraka is to have close relation with the action. Hetu generally gives the idea of a substance and has practically no invariable connection with the action. Bhattoji has clearly elucidated this distinction. A substance unconnected with action is called hetu, but Karana, as a form of Kāraka, is

¹ पद्मादीनां तु कर्तृत्वे तैष्मादि करणं विदु:-- Vakyapadiya, 8. 94.

द्रव्यादिविषयी हेतु: कारकं नियतिक्रयम्—Ibid.

त्रवादिमाधारणं निर्वापारमाधारणं च धनुत्रम् । करणलं तु क्रियामाविषयं व्यापारनियतं च II—Bbatton under the role Pan, 2, 9, 99.

necessarily found to have connection with the action. Hetu, to speak the truth, is the cause (samavāyikāraņa) pure and simple, and continues to be so as long as it does not come in close touch with the action, but the moment it does so, it ceases to be a hetu and becomes a Karana. Naiyāyikas have agreement with grammarians on this point. Gadādhara takes dhanena kulam, vidyayā yaśah, etc., as instances of hetu, since dhana and vidyā have no direct association with the action $(kriy\bar{a}yog\bar{a}bh\bar{a}v\bar{a}t)$. Jagadīśa has, however, taken a slightly different view. He insists that even the third ending in dandena ghatah is really indicative of Karana, though dandena is not grammatically regarded to be a Kāraka as such, obviously for the absence of relation with the action. On the ground of having close proximity with the action, Karana is virtually the same as cause (ianaka).2

Under the rule hetvarthe, Durgasiriha has clearly shown what is meant by hetu in an instance like annena vasati. So far as the popular usage is concerned, Durga maintains, a thing, though not actually connected with an action that leads to the final result, is called hetu simply on account of its having capacity for the accomplishment of action (phalamanispādayannapi kriyāyogyatayā heturucyate). Hetu is of

[े] द्रम्हेन घट द्रत्यचापि वृतीयार्थ: करणतं, परन्तु तन्न कारकं क्रियानन्वियलात्। न्यवभ — Sabdafaktiprakasikā under Kār. 71.

[े] विकरणगन्दन्तु व्यापारप्रत्यासच्या जनकस्य वाचकः—Sabdasaktiprakāsikā.

various kinds. One that intimately connects itself with the accomplishment of the action is termed Karana. Susem has referred to two-fold helu—grammatical as well as popular. The nominative case of a verb used in a causal form (as lànayati) is an instance of grammatical helu (hānayati yah sa helušea—Kalāpa). A helu, in its popular sense, is an object that is capable of performing the action favourable to the result (phalasādhanayogyapadārtha). Helu means capacity and not actual connection with Lriyā

Adhikarana is the substratum of action. What is popularly known as adhara or substratum of action is technically called Adhilarana in grammar. There is, however, some difference between the popular and grimmitical conception of Adhilarana According to the popular usage, substance, quality and action are all comprehended by Adhikarana, but in grammar the word is often used in a specific sense, ie, Adhikarana is suid to be an accessory (that indirectly helps the accomplishment of the action) that forms the substratum of action only indirectly. Bhartrhari lays much stress on the dependence of Adhiharana upon both the agent and the object and defines Adhikarana 2 as an upakāraka or accessory that becomes the substratum of action only

¹ लोकेऽधिकरणमविशेषण द्रव्यगुणकियाविषयमभिधीयते—Helsis

कर्तृकसंस्थवहितासमाचाद धारयत् क्रियाम्। चपकुवंत् क्रियासिष्ठी गान्ये ऽधिकरण सृतम् ॥—Vākyapadiya

through the intervention of the agent or the object, and serves, though indirectly, to accomplish the action.

We actually find that the effort or the action principally inheres in the agent and partially in the object; consequently they form the real substratum of action in the strict sense of the term. This is why Bhartrhari 1 has used the expression 'through the medium of the agent and the object,' and has thus made it sufficiently clear that Adhikarana is only indirectly related to the action. Intimately related to $\bar{a}dh\bar{a}_{I}a$ is ādheya or what inheres in the substratum. The relation in which the inherent stands to the substratum is manifold, such as conjunction, inherence and so on. But Gadādhara 2 has here raised his voice of objection so far as 'conjunction, is concerned. He argues in the following strain:—the relation between ādhāra and ādheya cannot be one of conjunction (samyoga), for, if it were so, there would be no criterion to distinguish the one from the other, that is say, ādheya 8 also might be treated as $\bar{a}dh\bar{a}ra$, as the very idea of conjunction comprehends two things (samyogasya dvisthatvāt).

Patañjali has divided Adhikaraṇa into three classes, namely, vyāpaka, aupaśleṣika, and vaiṣayika. Of these, vyāpaka is the principal

¹ कर्तृक्षस्त्र्यवहिताम् -- क्रिया कर्तरि कर्मणि वावतिष्ठते -- Helarāja. Vākyapadiya, 3. 1. अधिकरणाधिकार:।

² श्राधारावियभावश्र न संयोगादिरूपसम्बन्धात्मकः—Vyutpattivāda.

⁸ कुण्ड्यादिसंयोगिनी वदरादेरिप कुण्ड्याधारताप्रसङ्गात्—Ibid.

form of Adhiharana An expression like tilesu tailam constitutes an example of vyapaka The special feature of this class of Adhiharana is not only that the inherent (adheya) and the substratum are related to each other by co-inherence (samavaya), but also that the entire space of the substratum is pervaded by the inherent Devadatta is sitting on a mit' is an instance of aupaslesika, because here the agent sits only on a part of the mat and does not occupy the whole space Here the relation between the inherent and the substratum is one of simple conjunction Varsayika is expressed by such example as molse icchāsti (there is a desire for salvation) Helarali has cited the salunayah as an instance of vaisayiha, and observes that it does not strictly come under aupaslesika, because the sky being one and indivisible cunnot posibly have any parts. The so-called division of Adhiharana as sāmīpika denoting proximity does not really form an additional class Helaraja has explained the sentence Gangayām ghosah as an instance of aupaslesika that indicates the residence of ghosa in certain parts of the bank having close proximity with the current of the river

Adhikar ana is generally denoted in grammar by the seventh case ending Both Jagadisa and Gadadhara' hold that saptami indicates adheyatva (as is implied by the Adhikarana) or

भाषारसप्तया भाषेयलमधं --Vyutpattivada

the state of being the inherent. Saptamī has more than one meaning in grammar. In an instance of bhave saptami, the seventh case-termination precisely signifies 'contemporaneousness of action ' (samakālīnatva); in carmaņi dvīpinam hanti, saptamī denotes nimittatva or 'the state of being the cause' and so on. however, some inconsistency with regard to such examples as vīnāyām śabdah and karne śabdah, etc., because there is no verbal form so as to clearly give the idea of a Kāraka. Gadādhara rightly observes that in cases like these, where the verbal forms denoting an action are not explicitly used, we are forced to understand such verbs as bhava/i,2 etc., in order to explain the Kārakavibhakti. But the grammarians also seem to have the same answer, as they have taken recourse to the dictum according to which a verb, though not expressly mentioned but only understood, is even said to be competent to account for the case-ending.

From a grammatical point of view, Kārakas are denoted by sup. A question is, however, raised by Bhartrhari, if vibhaktis have any signification of their own so as to indicate the nature

¹ श्राधियलं सप्तम्यानुभात्र्यते ।—Vyutpattivāda.

[॰] एषु कारयातानिर्वाहाय भवतीलध्याहार: । त्रवच्छेयताविभेषीऽप्याधारसप्तस्यर्थ:। —Vyutpattiväda.

ग्यमानापि क्रिया कारकिभक्ती प्रयोजिका।

⁴ हचादांवान्वम्त्रमासिभनायोऽन्य उप्यते।—Vākyapediya, Kār. 3. 43.

of Kārakas. The meaning is expressed by a word taken as a whole and not as a composite of two parts, i.e., Prakrti and Pratyaya, Attention has already been drawn to the fact that the meaning of Prakrii, as in vrkse and vrksena, remains the same, while the sense usually denoted by the case-endings, i.e., substratum and instrumentality, only seems to be different. But the decision of the grammarians is of a peculiar nature. Since they hold that the meaning is expressed by a word as an indivisible whole (akhanda), the grammarians have given their verdict in support of the unreality of pratyayartha, as distinct from prakityartha. It is, however, contrary to the usual principle of grammar, because we find that the meaning of a Pratuava is related to that of a Pratinadika in order to determine the nature of a Karaka. What is, therefore, plausible is that the meaning of Pratyayas, as distinguished from those of Prātipadikas, is a fact that can hardly be denied. As the whole discussion on Karakas depends on the assumption of meanings on the part of the case-endings, the meaning of each vibhakti has been specifically shown by the grammarians.

Pāṇini defines Karman as what is sought to be obtained by the agent as the most desirable

भभेदेऽपि प्रज्ञयदेख इते इत्यायेलादी विभक्तायेष्य साधनलचण्य व्यतिरेजः। तथा तत्र च विभक्तायेलास्त्रलन्। येन प्रातिपदिकार्यऽप्यान्ध्ये भनुनानी इटलाती मन्यानस्टेऽसि कदिशांतिरिक्तः प्रव्यवार्यम्तीऽनयज्ञवनीयः साधनलचचमाक्तिप्रस्व चाणोऽये रति साधनसितिः ॥—Helåråja under tho Våkyapadiya, Kår. 3. 43.

thing. According to the logical conception, Karman forms the substratum of the result as is produced by the action (kriyājanyaphalaśālitvam). As it is not always the most desirable thing alone that the agent likes to obtain, Pāṇini had to, frame another rule (Pāṇ., 2.4.50) to make provision for such cases as visam bhunkte, where an undesirable thing like poison is even used as the object. But Patanjali thinks that this rule might be done away with, as the preceding rule is capable of being interpreted in such a way as to apply to all these instances. His arguments stand on the following facts: 1 sometimes swallowing of poison also happens to be desirable on the part of a certain man. It is not unlikely that a man from various kinds of distress (as poverty, bereavement, etc.) may be compelled to take to poison as a desideratum or relief; the swallowing of poison is as desirable to him as other eatables. Patañjali has finally arrived at the conclusion that the negative particle 2 in anīpsita does not indicate simply the opposite, viz., undesirable, but denotes anything other than the desirable.

In the Kātantra system, Karman is defined as what is done by the agent (yat kriyate tat

¹ विषभचणमपि कास्यचिदीिपातं रात्। क्यम् १ इह य एष मनुष्यो दु:खार्ची भवति सोऽन्यानि दु:खान्यनुनिशम्य विषभचणभेव न्यायो मन्यते।—Mahābhāṣya under the rule Pāṇ., 1. 4. 50.

² पर्युदासोऽयं यद्खदीिपातात्तद्नीिपातम्।—Ibid,

karma), and neither Survavarman nor Durga has spoken of such divisions of Karman as desirable and undesirable. Susena has made some important observations in connection with the interpretation of Karman. Following the met hod of the Naiyāyikas, he defines Karman as forming the substratum of the fruit produced by the action (kriyājanyaphalabhāgitcam). A careful examination of examples will, however, show that this definition is only a tentative one, and is not absolutely free from defects (aliryanti). According to the strict wording of the definition, the extent of the objective case would be so wide as to comprise even the agent, for, in an instance like 'Devadatta is going to the village,' we find that the fruit of the action, i.e., conjunction, does not accrue only to the object (village), but goes to the subject also as equally partaking of the fruit. It is, then, necessary to make further addition to the definition so as to render it applicable exclusively to the object. The additional words parasamavetatva would serve to distinguish the object from the agent in this respect that the former is the recipient of the fruit of the action that relates to others, viz., the agent (that is to say, the action is first brought into existence by the agent, the fruit

गामं गच्छति १वदम दलादी गतिक्रियाजनमध्योगस्यकलभागित्वात् यदा गामस्य कर्मलं तथा कर्तुति स्वात् । इति चेत् परसमधेतिक्र्याजन्यकलभागित्वामित मृम् ; — Kavirāja (Kāraka) on 219.

परसमदेसक्रियात्रश्रमणभागिलं वर्मलिगित।—Ibid.

whereof next accrues to the object). This is, however, not sufficient to preclude possible vagueness and misinterpretation, for, if the word para in parasamaveta is taken to imply something different from the substratum of the fruit (phalāśrayābhinnatva), the village, as in the above example, would not have legitimate claim to be treated as the object. When this definition also proves insufficient for reasons stated above, Susena at once suggests another which runs thus: 1 Karman, though it does not directly form the substratum of the action (like the agent), comes to partake of the result produced by that action. But the example parvatādavarohati (descending from a mountain) furnishes an obstacle in the way of accepting this definition as the most accurate one. Because in the above example (i.e., descending from a mountain) the mountain, though unaffected by the act of moving, is practically found to be the substratum of the fruit of the action $(vibh\bar{a}ga)$, i.e., separation. Consequently, it should be treated as the object and not as $Ap\bar{a}d\bar{a}na$. But grammar does not sanction such an usage.

Prompted by a strong desire to suggest a definition that would not involve any defect whatsoever, and aided by his intimate acquaintance with the logical method of argument,

¹ तत्क्रियानाश्रयत्वे सति तत्क्रियानन्यफलभागित्विमिति।—Kavirnja.

पवैतसापि सन्दनिवानाश्रयत्वेन सन्दनिवाजन्यविभागरूपफलाश्रयत्वात् कर्मलं स्थादिति (-Ibid.

Susena has afterwards said the last word on the subject.1 He says that though it does not comprise in itself the action, Karman is the recipient of the fruit of that action as it is qualified by the meaning of the root. Here qualified by the meaning of the root is to be taken as an adjunct of the 'fruit.' Avacchedaka means something like attribute or the object for which the action is resorted to (yaduddisya krivā pravartate). The act of descending has conjunction with the posterior place as its result, which does not pertain to the mountain (uttaradesasamyogastu parvate na vidyate eva) so as to make it the object of the verb avarohati. The mountain, so to speak, is the substratum of separation (vibhāgāsraya), and is not consequently entitled to get the designation of Karman. This is, therefore, the most accurate definition conceivable, from both the logical and grammatical points of view, that applies to all examples of Karman.

The association with the fruit is the criterion whereby roots are divided into two classes, namely, sakarmaka and akarmaka or transitive and intransitive. A root is said to be sakarmaka, when it denotes an action leading to the fruit, and akarmaka, when it denotes

¹ तत्कियानाययले सति घालयांवच्छेदकीभूत-तत्कियानायपल्यभागिलं क्रमेलमिति (—Lavirāja.

भ धातृना फलाविच्छश्रव्यापारवाचिले सति सक्तर्मकता, केवलव्यापारवाचिले सत्यक्तरेकता। and श्रियावच्छेटकं यस्य फलं कर्मा विविचतमः।

only an unqualified action. Thus, when we minutely follow the line of thinking, as revealed here, and consider the cogency of those arguments whereby definitions after definitions were rejected till one was found acceptable, our wonder is really excited to a great extent for what has been done by the Indian logico-grammarians.

Karman, it must be remembered, has got the widest and most varied applications in grammar. Just as sasthī is allowed to be used as a substitute for most of the vibhaktis, so Karman is the only case that may grammatically replace all the rest.1 It is expressly enjoined by the rules of grammar that Karman should have the preference to other cases (when it is so intended by the speaker). The examples of the so-called dvikarmaka-dhātu (viz., roots having double objects) furnish evidence how Karman might be used in the place of Apādāna, Sampradāna, and Adhikaraņa.2 The indirect objects in such cases as gām dogdhi payah might be treated quite as good as an Apādānakāraka and so on.

There are, broadly speaking, seven different forms of karman, namely, nirvartya, vikārya,

¹ प्रवाधितं च-Pāṇ., 1. 4. 51.

² गां दीग्धि पय:, कथिताच पूर्वीपादानसंज्ञा। पुतं बूते धर्मम्, कथिताव पूर्वो संप्रदानसंद्या। अन्ववरुणिंद्य गां अजम्, कथिताच पूर्वाधिकरणसंज्ञा। -Mahābhāṣya under the rule Pān. 1. 4. 51.

निर्वर्तेत्र च विकार्यं च प्राप्यं च चिविधं मतम्। तने िमततमं कर्म चतुर्घाऽन्यत्त काल्पितम् ॥— Vākyapadīya, Kār., 3. 45.

prāpya, audāsīnya, anīpsila, sanijāāntarānūkhyāta and anyapūrvaka. According to Bhartrhari, the first three are to be regarded as principal varieties and the rest are more or less fanciful (kalpita). (i) Nirvartya generally means what is brought into existence by an action. We have a nirvartya-karman when the word denoting prakrti or material cause,1 whether existent or non-existent, is not expressly mentioned. Ghatam karoti is an example of nirvartya-karman. Here we find that praktli or material cause, whether existent or non-existent, is not expressly mentioned. We notice that Praketi or material cause (i.e., earth) of the pot is not expressly said to have assumed the shape of a pot (as mrdo ghalam karoti) by way of modification, so as to show the non-difference (abheda) between the cause (earth) and the product 2 (pot). Now, what is desired by the speaker is to show as if clay and pot were different (as in mṛdā ghaṭam karoti) or the product were not a modification of the cause. Prakrti is existent, but is not actually said to have undergone any change so as to re-appear in the

of $k\bar{a}rya$. When the modification (parināma) of prakṛti or cause is intended to be expressed, we have vikārya-karman, as in mṛdā ghaṭam karoti, kāśān kaṭam karoti, angārān bhasma karoti and so on. It should be, however, remembered that ghatam karoti may also prove to be an example of vikāryakarman to those who take the product or the effect only as a transformation of prakrti or the material cause. It is difficult to determine what really comes in existence (sat or asat). The question of production and existence with particular reference to their mutual dependence has already been discussed. What is now produced, some hold, was non-existent previous to its production (asat). Again, some that it is really existent (sat) that is produced (sadeva jāyate).

According 2 to both these views, Karman, as manifested or brought into existence by the activity of the agent, might be regarded as nirvartya. Those who are satkāryavādins like the Samkhyaites are likely to support nirvartya-karman. A thing that comes into being by some sort of action or is simply manifested by its brith (janmanā yat prakāsate) is called

चटं करोतीत्यवापि प्रकृते: परिणासिलेन विवचायां विकार्यमेव।
—Vaiyākaraṇabhūṣaṇa.

² यदसञ्जायते सहा जन्मना यत् प्रकाशते । तिविवैत्ते विकार्ये च कभे देधा व्यवस्थितम् ॥—Vākyapadīya, 3. 49.

nirvartya. Here janman implies the manifestation of something that was previously existent, as putram prasūte (giving birth to a son) necessarily means the birth of a son that was existent before delivery in an embryonic stage. But when prakṛti is intended to be expressed by the term janman, what is produced may be looked upon as vikūra or modification in relation to prakṛti.

Vikārya-karman is so called because it appears to be a modification of prakṛti or material cause. Vikāra means a change from one state to another and presupposes existence, i.e., modification pertains to things that are already existent (labdhāsattākamevāvasthāntara-māpadyate). It is principally of two kinds,¹ namely, (i) as produced by the entire annihilation of the material cause (prakṛtyucchedasambhūtam), as in kāṣtham bhasma karoti (reducing the fuel to ashes); and (ii) as characterised by some different properties or qualities (distinct from those of prakṛti), as suvarṇam kaṇḍalam karoti (sarrings are made out of gold).

Quite in agreement with the definition of nirvartya, the expression bhasma karoti is to be taken as an instance of nirvartya, since prakrti or material cause (fuel), of which ashes are only modification, is not expressly

¹ प्रक्रशुष्टंदसम्पूतं किंचित् काष्टादिभव्यवत्। विधिदं गुणालरोत्पच्या सुवर्णाद्विकारवत्। — Vākyapadiya, 8.50.

mentioned. In the first case prakṛti is found to have entirely lost its own self in course of modification. That the difference between prakṛti and vikṛti is only formal and not material is made clear by the example suvarṇam kuṇḍalām karoti. Those who support the view that product or vikāra has its existence in the cause (fuel) in the shape of efficiency are not likely to differentiate prakṛti from vikṛti, assuming ashes to be already existent in the fuel.

From a strictly Vedāntin point of view, kuṇḍala is vivarta, as opposed to vikāra, because it differs from gold only in form but not in essence. From what we have seen above, it is clear that there is, strictly speaking, no remarkable difference between nirvartya and vikārya, as the instance ghaṭam karoti has been explained in both the ways; the difference is mainly created by the desire of the speaker. A Karman, as Helārāja clearly points out, is called nirvartya when prakṛti is not directly mentioned (by the speaker), and the same is called vikārya when prakṛti is expressly mentioned.

³ काष्ठानि भस्म करोति, निर्वर्त्तप्रमितत् कर्म प्रकृतिरिववचया। विवचायां तृ विकार्थम् |---Helārāja.

(3) Prāpya, i.e., prāpya-karman' is that wherein the action of the agent does not produce or give rise to any special feature or quality. Usually we have a prapya-karman when the action does not produce any visesa or change comprehensible either by direct observation or inference. A karman in its ordinary grammatical sense is known as prāpya. In ādityam pasyati, 2 mere perception serves only to suggest a relation between the action and the object observed, and nothing like visesa is cognisable. In the case of a nirvartya-karman as ahatam karoti, the speciality that is (kriyākrta-višesa) perceptibly brought about by the action is the production of the pot. But sometimes inference also helps us to get a specific cognition. as one can easily determine through the help of inference whether a man is enjoying pleasure or not only by observing his facial features. But in an instance of prapya-karman, such as ādityam pasyati, we find that the action (seeing) does not bring about any change or special feature in the sun.

Some, however, do not recognise anything like prāpya-karman on the ground

¹ क्रियाक्रतिविशेषाणां सिद्धियेत न गम्यते । दर्शनादनुमानाशा तस् प्राप्यमिति कष्यते ॥—Vākyapadıya, 3. 51.

 $^{^{2}}$ អែជិក្សិតអំំខែ កែនូចកែកគេលោអ एव តែជាគ្រត់ विशेष, विकार σ តែជាគេតា विशेष, $-Helora_{0}$.

³ कर्तुः क्रियाविषयभावभादेचे शित्तमस्तात् प्राप्यं कर्मः। प्रमाणाश्चां क्रिया-सम्बन्धमातं तुलस्यते, न च स एव विशेष, !—/lbd.

that the action is invariably followed by some sort of changes, whether directly perceptible or comprehensible by inference only. Even the simple act of seeing is sometimes attended with $vik\bar{a}ra$. Snakes 2 are proverbially said to have poisonous look; whoever is eagerly seen by them, though not actually bitten, is sometimes found to be in an agony of pain.

- (4) Audāsīnya.—It is what is done by the agent through indifference; as, for instance, a man while going to a village may happen to touch a straw on his way (grāmam gacchan tṛṇam spṛśati), though in so doing (touching) he has got no particular object in view. The author of the Mahābhāṣya has illustrated this class of Karman.
- (5) Anīpsita or undesirable karman.—This has been explained in connection with such examples ^B as viṣam bhunkte (taking poison).
- (6) Anākhyāta.—This, too, has been explained with reference to the rule akathitam ca.
- (7) Anyapūrvakam.—This refers to those cases where karma-kārakas are specially sanctioned by the rules of grammar in the place of other kārakas, as in krūramabhikrudhyati, etc.

The objective case also admits of other divisions, such as direct and indirect, in

¹ नाख्येव प्राप्यकर्म सर्वेच क्रियाक्षतविभेषावधारणात्।—Helārāja.

इष्टिविषेरिहिभिनिरीचितो विषयो ज्वलनज्वालालीढ़ो लत्स्यते।—Ibid.

⁸ Pān., 1. 4. 50.

connection with those roots that comprehend two objects. We have already alluded to the condition (the desire of the speaker) under which Karana and Adhikarana might be used as the subject. There are instances like pacyate odanah, lūyate kedūrah, etc. where the objects are found to have practically changed into the agent. The so-called agent is known in grammar as karmakartā.

Helārāja has spoken of two more divisions of karman, namely, antaranga, denoting things, and bahiranga as prehending such objects as time. intransitive verbs 1 (āste, svapiti) are allowed to be governed by only such objects as denote particular time, country, path and action. Therefore, in grammar 2 intransitive verbs are those that can have no other objects excepting time, country, etc. Bhatrhari is not prepared take these as regular objects; his contention is that it is impossible to conceive of any objects in connection with the intransitive verb. What appears to be reasonable on a minute examination s of such examples as māsamāste, kurūn svapiti, etc., is that their karmatva is.

[े] कालभावाध्यमन्त्र्याः कर्मसंज्ञा द्यावर्गणाम्।---Mahābhāşya, Vol. I, p. 336.

वैषा देशकालादिभिन्नं कर्म न संभवति तेऽवाकर्मकाः, न लविव्यत्विक् कर्माणोऽपि ।—Biddhāntakaumudi under 1.4. 52.

क क्षियान्तरापेचया तेषा कर्मलम्।—Helārāja. व्यातादिक्षिययातु निव्यमाप-लात् कालादीना कटनेव कर्मलम्।—Helārāja.

strictly speaking, due to their implied relation with some other verbs as $vy\bar{a}pya$ meaning lasting for (understood). According to this interpretation, the expression $m\bar{a}sam\bar{a}ste$ really means $m\bar{a}sam\ vy\bar{a}py\bar{a}ste$ (staying for a month).

Patanjali has referred to another form of Karman, namely, kalma, which means an unaccomplished object (aparisamāptam karma). These irregular Karmans (as are illustrated by the rule akathitam ca) take dvitīyā as their only characteristic feature, but do dot generally receive all those grammatical operations which are applied to the regular objects alone. Kaiyata observes that the term kalma was used by the ancient grammarians as a technical name for those objects that are sanc tioned and recognised as such by the rule $P\bar{a}n$, 1.4.51.

Apādāna is that form of $K\bar{a}raka$ which denotes the limit of separation. The definition of Pāṇini ($P\bar{a}n$., 1.4.24) deserves careful examination, specially with regard to the word dhruva as occurring in the $s\bar{u}tra$. The word dhruva generally means 'motionless,' but this sense is hardly compatible when the limit of separation is also found to be in motion,³

¹ विपरीत तु यत् कार्म तत् काष्य कावयी विदु: |-Mahābhāṣya, Vol. I, p. 336.

² न वास्मिन् सर्वाणि कर्म कार्याणि क्रियन्ते, किं तर्हिं, दितीयैव।

³ गतियुक्तीष्वपादान संज्ञा नीपपदातेऽभ्रवत्वात।—Vār. on the rule Pāņ., 1. 4. 24.

as we say 'fallen from a running horse.' Here both the horse and the rider are equally in motion and, consequently, it is not possible to have the cognition of a fixed limit so far as the act of separation is concerned. How, then, are we justified in taking the word asca in a sentence like 'fallen from a running horse' as an instance of Apādāna-kāraka? Patañjali 1 holds that there are also some stationary or permanent elements in the horse, such as the genus (asvatva) or the state of being a horse and 'the swift motion' which are said to be the implication of the speaker in a sentence like dhāvato'svāt patitah. He thus makes it clear that in like cases what the speaker desires to indicate refers really to dhruvatva or motionlessness and not to the opposite.

The word dhruva should not be taken in its strictly literal sense, 2 i.e., motionless. Of two things, namely, the limit and the object that is actually separated, the former, i.e., tree, as in vykşūt parnam patati, is more or less unaffected by the act of separation; consequently, it is grammatically called dhruva in relation to the leaf that falls down as the result of separation.

Bhartrhari has stated clearly that Apādāna forms the limit of separation, whether movable

¹ इड ताबद्यामस्तात् पतित:—इति यगदर्ये ऽयलमाग्रगामिलं तद धुवं तश्च विवचितम् !—Msbšbbāyya, Vol. I, p. 327.

[•] द्रव्यख्याची न धीव्यमिति एते प्रतीयते । पपायविवयं भीव्यं यम् ताबहित-चितम् ।—Vākyapadiya, ३ ३. भृतं क्टम्यं निष्मियमिति द्रव्यख्याची भीव्यमिति न मुद्रे प्रवेतव्यम् ।—Helārāja

or fixed (calam vā yadi vācalam) and that the limit, though the substratum of separation, is not practically affected by the operation of the wind which is the direct cause of separation. example kudyāt patato'svāt patitah both the wall and the horse are to be regarded as dhruva, the former constitutes the limit of separation in regard to the falling of the horse, and the latter in regard to the man who falls down from the falling horse. The word dhruva is thus used as a relative one: it does not necessarily mean an absolutely motionless thing, but generally what remains more or less unaffected in the course of separation. When separation is brought about by the reciprocal action of the two, as in apasarato mesādapasarati mesah, each of them is to be considered as dhruva in regard to the action

It is necessary to make one point perfectly clear. In the oft-quoted instance of $Ap\bar{a}d\bar{a}na$, viz., 'a leaf is falling from a tree,' the relation, it must be remembered, between the tree and the leaf is one of simple conjunction and not of co-inherence ($samav\bar{a}ya$), that is, we have $Ap\bar{a}d\bar{a}na$ only when the leaf happens to be brought over the tree either by the wind or by birds, but not when the leaf stands in an inseparable connection with the tree.

of the other.

¹ नियान्तरित्रयापेचमविधतं पृथक् पृथक्। निषयी: खिक्रियापेचं कर्तृत्वं च पृथ पृथक्का, — Vākyapadiya, 3. 6.

When, on the other hand, co-inherence is intended to be expressed, we get sasthi instead of pañcami, as in vrl. sasya parnam patati.

As the act of separation equally affects the tree as well as the leaf (the very idea of separation comprehending two objects), Susena argues that the leaf also may have the designation of Apādāna in such a case. But it is against the desire of the speaker. Moreover, paūcamī in yatah is indicative of limit, which, in the fitness of things, applies to the tree and not to the leaf. Susena then suggests a logical definition of limit—'though practically unaffected by the operation (of the wind) that relaxes the connection, the limit or Apādāna forms the substratum of separation.'

Separation may be either physical or intellectual. Patanjali has recognised the desirability of acknowledging the intellectual separation and has, consequently, rejected some sate as and vartitias, such as Pan, 1.4.25, 1.4.26, 1.4.27, 1.4 28, as superfluous. In accordance

[ै] हचन पर्के प्रतितिथै भाग्ने भिद्यितम् ।—Vākyapadiya हचसम्बन्धिनः पर्केष्य पातो बाक्तार्थे विविदत् , इति हचन्याविधना विविदात्र मुक्ति (—Helātēja

Busens has the following — मृत्यपायो विशेष, विभाग इति यादत ।
 म च पर्वतिष्ठो अविनिष्ठय, तती यथा अवस्थापादानशभा तथा पर्वव्यापि कर्य न भ्यात् ?
 इति चेत्र, भिमायापरिभागत ।

with his view, the rule dhruvamapāye pādānam is quite sufficient to explain all those instances that are usually supported by the additional rules.

Bhartrhari speaks of three kinds of $Ap\bar{a}d\bar{a}na$, namely, nirdiṣṭaviṣayam—when the limit of separation is fixed, or, where the sense of separation is directly denoted by the verbal form, as in $gr\bar{a}m\bar{a}d\bar{a}gacchati$ (coming from a village) and $a\bar{s}v\bar{a}t$ patitaḥ (fallen from a horse); $up\bar{a}ttaviṣayam$ —when the sense of another verb appears to be either principal or subordinate, as in $val\bar{a}hak\bar{a}t$ vidyotate (lightning flashes forth from the cloud); apekṣitakriyam—when the act of separation is to be understood, as in $kuto\ bhav\bar{a}n$ (wherefrom do you come)? Here the verb like $\bar{a}gacchati$ is to be supplied.

Sampradāna is that form of Kāraka which is desired (by the agent) to be the recipient of the fruit of ownership (svatva) pertaining to the object of the root dā (to give). Suṣeṇa explains yamabhipraiti as what is connected with the action (dadāti) by the instrumentality of the objective case. Abhipraiti gives the idea of a relation which is, in the logical terms, thus expressed: a recipient of the fruit, i.e., ownership pertaining to the object of the action (krivājanya-karmaniṣṭha-svatvaphalabhāgitvam).

[े] य एव मनुष्यः प्रेचापूर्वकारी भवति स पराति दुःग्वीऽधर्मा नानेन झत्वम-भीति। स प्रदाा संप्राप्य निवति। तप भुवसपायिऽपादानसित्वेव सिद्धम्। —Mahabhasya under the rule Pap., 1. 4. 24.

^{ै (}नर्दिच्यिपय' कि'चिद्रपात्तविषय' सद्या । इधेदिस्मित्र चेंसि पिधापादानसूधान ह—Vakyapadiye, 3, p. 193.

According to the interpretation of the Vyutpattivāda, the example viprāya gām dadāti
(giving a cow to a Brahmin) will mean a Brahmin who is the object (uddesya) of the desire for
gift which is made with the intention of making
him the recipient of the ownership of the cow, as
is effected by the act of giving. Sampradāna
is, therefore, the same as uddesya, i.e., a person
to whom something is made over. This is
clear from the language of the rule yasmai
ditsā, etc. (Kalāpa, 216).

The word sampradāna is treated as an anvarthasamjñā, i.e., it means exactly the same thing as is denoted by its derivative meaning (sampradīyate yasmai). It is a gift 3 (dāna) by which the previous owner transfers his legal right to another. Prayer, 4 acceptance and inducement are considered to be the causes that persuade a man to make a gift of his own right. A gift in the religious sense of the term should proceed from a desire for either worship or favour as in devatāyai puspam dadāti (offering flowers to a deity) and bhrtyāya vastram dadāti (giving clothes to a servant), when in so doing the person to whom something is made over is entitled to the actual ownership.

- व्यागन्दपित्रयाजन्यगीनिष्ठस्वतभागितया दातुनिन्द्याविषयी ब्राह्मणः।

- ³ खललम् सपूर्वकपरस्त्रापादान् ददातर्थः :—Kavırāja.
- श्रतमलिराक्तप्रेरक लागकारणम्।
- ि संप्रदान तदैव यात् पूजागुग्रस्कान्यया । दीयमानेन संयोगात् सामिल लभते गरि ॥—Kārikās quoted by the Paŭjikāra,

The word Karman, as in Pan., 1.4.32, is used to exclude the objective case getting the designation of Apādāna, since what is desired by the agent abhipraiti) is a qualification that also applies to the object. It is generally explained as particularly implying the object the root $d\bar{a}$ (to give), but the author of the Bhāṣya has taken it in the sense of action (kriyā) in general. He has also cited popular instances to show that the word karman is used with the same signification as kriyā. Kriyā is sometimes called karman. As there is difference of meaning between the two expressions, namely, kām kriyām karişyasi (what action will you do?) and kim karma karişyasi, one is allowed to use the word karman in place of kriyā. Patañjali calls it a kind of artificial (kṛtrima) karman. It is called artificial 2 because its use in this particular sense is not sanctioned by the grammarians in general. If karman is taken to be synonymous with krivā, one may apprehend some difficulty in explaining the rule Pāņ., 1.4.49, since it is impossible for one krivā to render another as the most desirable one (katham ca nāma kriyayā kriyepsitatamā syāt).

¹ कियापि छिन्सं कर्स-Mahābhāşya.

[ै] जियापि किन्नमं कर्म। न सिध्यति। कर्नुरीपिततमं कर्म इत्युचित। क्यं च नाम क्रियया क्रियेपिततमा स्थात् । क्रियपि क्रिययेपिततमा भवति। क्या क्रियया ? इह य एव मनुष्य: प्रेचापूर्वकारी भवति स बुद्धा तावत् किंचिद्य संप्रयति संहर्ष्ट: प्रार्थना प्रार्थनायामध्यवसायोऽध्यवसाय श्रारमा श्रारमो निवृत्ति निवृत्ती फलावार्ति: |—Mahābhāṣya, under the rule 1.4.32.

How minutely Pataūjali¹ used to observe the logical sequence of facts is clearly seen from the way in which he has shown the successive stages through which one \$\langle riy\arraycolor{u}\$ or action may become the most desirable by means of another action. The usual order is as follows: a man first conceives something by his intellect, then he feels a desire to have it, next comes the effort which is followed by the actual commencement of action, then the completion or accomplishment of the action, and finally the attainment of the desired end.

As it is not always the case that Sampradāna should be invariably connected with the object of the root dā alone, Kātyāyana has added a Vārttika obviously to widen the scope of Sampradāna. On the strength of this supplementary Vārttika we are allowed to explain Sampradāna even in the case of an intransitive verb like patye sete, where the root being an intransitive one, we cannot grammatically expect to have an object that might be connected with Sampradāna as such.

Patanjali seems to have minutely scrutinised every part of the $s\bar{u}tra$, $P\bar{u}n$, 2.4.32. He does not take the root $d\bar{u}$ in its strictly literal sense (to give), nor does he lay much stress on

Mahābhāṣya, Vol. I, p. 330.

⁹ क्रियया यसभिप्रेति सोऽपि संप्रदानम्। Pataujali has क्रियायस्थानिय कर्तव्यम्, इसपि यथा स्रात्—याद्याय निगर्देत, शुद्धाय संनद्यते।—Mahabhasya, Vol. I, p. 330.

the derivative meaning (sampradīyate yasmai iti), but considers Sampradāna to be one to whom something is actually given. The instance siṣyāya capeṭam dadāti (gives a slap to the pupil), as cited by Patañjali, is a clear indication that he held a far wider view of Sampradāna. It is not evidently the use of the root dā that always gives the idea of Sampradāna, because in the example rajakasya vastram dadāti (where the genitive is intended by the speaker) the explicit mention of dadāti is not even attended with caturthī (Sampradāna-kāraka).

Susena explains the rule Pan. 2.4.32 the following way: -Sampradāna is what is desired by the agent through the instrumentality of the object. It is neither 1 the object of the verb in general, nor virtually the object of dadāti in particular wherewith Sampradāna is really connected; for, according to the first view, the village, as in ajām grāmam nayati ('brings a goat to the village') would be quite as good as Sampradāna; according to the latter, the designation Sampradāna might be applied to the 'washerman in the example clothes are given to a washerman.' The anomaly presented by the above instances received an ingenious solution at the hands The drift of \mathbf{of} Susena. argument follows: is as as the sense giving naturally follows from the very

[े] क्रियामात्रस्य कर्मणा यं खंबधाति, दहाते: कर्मणा वा ? नादाः, श्रनां ग्रामं नयति—द्रत्यादी ग्रामस्यापि संप्रदानत्वप्रसङ्गात । नापि द्वितीयः, रजकस्य वस्त्रं दहाती-त्यादावित्रसङ्गात्—Kavirāja (Kāraka).

construction of the word Sampradana (anvarthasamiña), the definition is not vitiated by the fallacy, viz., ativyāpti,1 that is to say, the village cannot grammatically have the designation of Apadana owing to the absence of any connecwith the root $d\bar{a}$. Similarly, as the tion preposition sam in Sampradana serves to indicate that dadati does not mean merely giving, but signifies gift in its legal sense, i.c., the waiving of one's own right (in regard to a thing) so as to allow another to enjoy the same as his own possession, the washerman cannot be treated as Apādāna even in connexion with the verbal form dadāti (dadāti means hore 'to make over' [arpana], and not actual giving [dana].

Susena, therefore, explains dāna as a kind of 'desire' to transfer one's right to another after the entire cessation of one's own right, and gives the accurate definition of Sampradāna in the following terms—tyāgajanyasvatvaphalabhāgitvam, i.e., Sampradāna is the recipient of the result of right or ownership that is transferred to one by formal gift. He further asserts that the principal' or direct instances of Sampradāna are

[•] चचन, संदर्शिमव्यवधं तार्था दा-भाती; यवणाह्दातिर्थयते...वण ससुर-सर्वेण सम्बद्ध् प्रदीयते वर्षे तत् संमदानिमित खुत्पचा खखलभ'सपूर्वसप्रखलायादार्थं उटातिरहीं सम्बत्धे ।—Koviraja.

ख्रस्तलभ्यं सदारा परख्त्वजनकोभृतः संकल्पनिगेषो दामस्।—Kavirāja.

एतत् सर्वे यत्र वासिका तव सुख्यमेव संप्रदानम्। भवासिकि तु विव्यामानिय प्रयोगस्य साधुलम्।—Kavirājo.

those where the transference of right actually takes place, and that in regard to other cases, it is generally the desire of the speaker $(vivak;\bar{a})$ that accounts for the use.

The validity of Sampradāna in pradīyatām Dāśarathāya Maithilī (as Rāvaṇa had no legal right over Sītā so that he might be entitled to make a gift of her to Rāma) depends upon the desire of the speaker, i.e., it is said as if Rāvaṇa had transferable right over Sītā. The fact is that one cannot give anything to another in the legal sense of the term, if he does not own it actually.

Bhartṛhari has spoken of three kinds of Sampradāna:—(i) anirākartṛ—it means a kind of Sampradāna that does neither accept nor refuse what might be offered to it; as, for instance, Sūryāya argham dadāti; the sun neither solicits worship nor is likely to refuse it; (ii) prerakam—i.e., what induces others to make over something to him, as in viprāya gām dadāti. Here the Brahmin is supposed to have induced the man to make a gift of the cow to him; (iii) anumantṛ—who approves of a gift, i.e., permits a man to make over something (though he does not actually request him to do so) as in upādhyāyāya gām dadāti (presenting a cow to the teacher).

¹ दलव रावणम्य मैचिल्यां खलाभाविऽपि खलविवचया प्रयोगस्य साधुलम्।—-Kavirāja.

CHAPTER VIII

SAMĀSA

Samāsa—definition—The meaning of samartha, ekārthībhāsa and vyapehēd—Classification of Samāsa—Power of expressing the additional sense.

The psychological principle underlying the formation of compounds and the unity of sense denoted by Samīsa has been considered in my "Linguistic Speculations of the Hindus." An attempt will be made here to show the grammatical side of the problem with particular reference to the conflicting views held by the Naiyāyikas and the grammarians on the question of the additional denotating power of Samīsa.

The word Samāsa literally means brevity, i. e., condensed or concise expression. This grammatical device has the advantage of condensing a sentence without any change of signification. It must be, however, remembered that it is not only words, or more properly nāmans, that combine with each other in a compound, but their meanings, too, are so consistently related to each other (as noun and

adjective) as to give rise to one qualified idea. Though composed of two or more padas, a Samāsa produces only one idea in the mind.

According to the rule samarthah padavidhih, $P\bar{a}n$. 2.1.1, which is quite as good as a $Paribh\bar{a}s\bar{a}$, words are allowed to form a compound when they are found to be mutually expectant and their meanings compatible with each other. Sarvavarman has nāmnām samāso yuktārthah, which means that a compound represents the consistent unification of the meanings of two or more nāmans.' A combination of nāmans expressing a united sense is what is grammatically called Samāsa. The meanings are consistently united when the words forming a compound are related to each other as substantive and attributive. The kārikā 1 quoted by Durga goes to show that viśesya and viśesana in their harmonious association are only competent to form a compound. Samāsa, holds Durga,2 is distinct from a sentence. But it is generally expressed by a sentence (vigraha) only to help the understanding of unintelligent people. The word samartha, as used in the sūtra, is of considerable importance and has given rise to various interpretations.

Patañjali has explained sāmarthya from two different standpoints, namely, vyapekṣā or mutual

[े] विशेष्यस विशेषेण मिलित' युक्तसुच्यते । समासाख्य' तदेव स्यात्ति दितीत्पत्ति-

स पुन: सभावादाक्याद्वितः तत्तुल्यक्ष्पावयव इति क्रत्वा श्रवुधबोधनाय नान्तां यक्तार्थ इत्युचते ।---Kalāpa, Tikā,

connection and ckārthibhāva or the oneness of meanings. He has made it abundantly clear with reference to all forms of compounds that no Samāsa whatsoever is grammatically admissible in the absence of such sāmarthya or competency. He has also suggested various meanings of the word samartha in order to show how the word might correctly be used to imply both vyapckṣā and ckārthībhāva.

According to his interpretation,1 the word samartha may be used in the following senses, namely, consistent or mixed up (sangatārtha), united (samsrstartha), visible (sampreksitartha) and connected (sambaddhārtha); the first two meanings indicating united into one (ekibhūtam) are agreeable with the ekārthībhāva point of view, and the last two indicating connection of meanings being harmonious with the vyapeksā standpoint. So far as the ekārthībhāva2 view is concerned, the word samartha should be taken as implying united meanings (ekībhūtam), and it brings out the sense of 'connected meanings' (sambaddhārtha) or 'reciprocally expectant meanings,' when vyapeksā is considered to be the essential condition of Samāsa. The word samartha indicates that words are not allowed

Mahābhāṣya under the rule Pāņ., 2. 1. 1.

[ै] तद यदा ताबदेकार्थीभाव: सामध्ये तदेवं विषष्ट: करिष्यते संगतार्थ: समर्थ: संख्टार्थ: समर्थ: दित: एकीभृतिभिति गयते !—Mahābhāṣya under the rule Pāṇ., 2, 1. 1.

to form a compound unless they are samartha, i.e., have either mutual connection or compatibility of meanings.

Patanjali then proceeds to bring out the full import of sāmarthya and clearly shows why Samāsa 1 does not usually take place in expressions like bhāryā rājñah purușo devadattasya and mahat kastam śritah. What means to say is this: no compound is possible between two words when one of them is grammatically connected with another word that does not form a part of the compound; in mahat kastam śritah the form kastam is asamartha (incompetent) to be compounded or consistently united with the word śritah on account of its having relation with the word mahat that qualifies it. Here asamarthya for a regular combination in order to form a Samāsa is due to the fact that the words mahat and kastam are mutually expectant as noun and adjective.2 To use the logical phraseology, sapeksatva implies the state of having relation with a word that is not a member of the compound.3

The grammarians, as a rule, are not prepared to allow the formation of compounds in cases of such $s\bar{a}pek$; atva. This is what is actually meant by the dictum savi\$e\$; an\$\bar{a}n\$\$\bar{a}m\$\$

² वसामधीत्।—Mahābbāşya under the rule Pāṇ., 2. 1. 1.

² सापेचनसमधं भवतीति।--Ibid.

^{युक्तार्थघटकीस्तपदातिरिक्तपदमक्वित्वं सापेचलम्।}

[🕯] न सापैचे क्वचित्रसमासाः।—Mahābhāşya,

erittirna, that is, a word cannot enter into combination with another word (in a Samāsa) if it happens to have an adjunct. A question may arise at this stage as to how compounds are admissible in instances like rājapuruso abhirūpatarah and rājapuruso darsanīyah (a beautiful officer of the king), because the word purusa is here compounded with the word rajan inspite of its relation with the adjective abhirupa. Now Patanjali 1 comes forward with his argument to justify the formation of a compound in such cases. When the principal member not the subordinate one, he happens to be sapeksa or connected with some other word (as adjective), there is practically no restriction for the formation of a a compound. What we actually find in rajapurusah abhirupah is that the principal member, i.e., purusali, is connected with the adjunct abhirupa and, therefore, Samāsa is grammatically admissible.

But sentences like Devadattasya gurukulam and caitrasya dāsabhāryā (the wife of the servant of Caitra), etc., which are avowedly correct in popular usage, present further difficulties. Pataŭjali first tried to get rid of this anomalous position by explaining the genitive in Devadattasya as implying relation with the whole and not with the

¹ Mahābhāṭya, p. 860 : प्रधानसन सापेद्धं, भवति च प्रधानस्य सापेद्धः। समास: I

word guru alone, but this argument also proved futile, because, the sentence is really intended to express particularly Devadattasya yo gurustasya yat kulam and so on. He then finally concludes that Samāsas are admissible in these cases (even inspite of sāpekṣatva) on account of gamakatva or power of expressing the intended sense. A compound is said to be gamaka when it is capable of expressing the very same sense (no matter if there is sāpekṣatva) as is implied by the words that go to form such a compound. This is exactly what is meant by the statement sapeksatve'pi gamakatvāt samāsah. As to why Samāsa is not admissible in mahat kastam śritah, there is no denying the fact, says Patanjali, that the signification of the sentence in this case is not necessarily the same as is expressed by the compound. This is the way how Patanjali relaxed the rigidity of his previous statement (sapekṣamasamartham bhavatīti).

Jagadīśa² ventures to differ from the grammarians. He has little regard for the view that a compound and its vigraha (the sentence to which the compound might be

[ा] इह समानार्थेन वाकीन समासीन च भवितव्यम्। यश्रेहार्थी वाकीन गम्यते महत् कष्टं श्रित इति न नातुचित् समासीनासी गम्यते महत्कष्टश्रित इति। यव गमको भवित भवित तव हित्तः, यथा देवदत्तस्य गुरुकुलम्।—Mahābhāşya, Vol. I, p. 361.

[ं] विग्रहे एव समासलभ्यार्थस्य वोधकलं तन्तं, न तु समासे विग्रहार्थस्य, विग्रह-लभ्ययोर्लिङ्ग संस्थ्ययोर्व्यञ्जकवैधुर्येण प्रायण: समासानोध्यत्वात्।—Sabdasaktiprakāsikā, under the Kār. 33.

dissolved) must have the same meaning, and holds in opposition that the vigraha, as a rule, should bring out the sense of the compound but it is not equally binding that a compound should necessarily express the entire meaning of the sentence. He has, accordingly, disjoined the compound sphuradvānī (articulate speech) as sphurantīm vānīm without having any regard to the equality of case-terminations between vyāsa and Samāsa.

The two views—ekārthībhāva and vyapekṣā—correspond respectively to jahatsvārthā vṛtti and ajahatsvārthā vṛtti: the former means that when a compound is formed, its component parts cease to retain their individual meanings, and give rise to only one united sense; and the latter implies that such constituent parts do not, as a rule, give up their meanings (as in a sentence) as a necessary condition of Samāsa.

According to the first view, samartha implies the oneness of meanings (i.e., the members of a compound having different significations are made to signify only one sense). A sentence, on the other hand, is made up of different padas that continue to retain their own meanings as rājňah puruṣah. We have to deal here with a problem of great importance.

- भ व्याग्रमास्योद्धात्यार्थकलम् ।
- Šabdaśaktı—Samāsaprakaraņam.
- पृथ्ययथीनामिकाथौंभाव: समध्वचनम् |--- Yûr.
 पृथ्ययथीना पदानामिकाथौंभाव: समधिमत्युचते |--- Mahābhāēya

As a matter of fact, there is no material difference between a sentence and a compound so far as the meaning is concerned, for instance, the compound and the sentence like $r\bar{a}j\bar{n}ah$ puruṣa $\bar{a}n\bar{i}yat\bar{a}m$ and $r\bar{a}japuruṣa$ $\bar{a}n\bar{i}yat\bar{a}m$ grammatically mean the same thing, viz., fetch an officer of the king. It, therefore, goes against the assumption of Jagadīśa who made a distinction between $Sam\bar{a}sa$ and vigraha with reference to their meanings.

Wherein, then, lies the difference between vyāsa and Samāsa? The criterion to distinguish a Samāsa from a sentence is that the former characterised by aikapadya and aikasvarya from the grammatical point of view. The prominent points of difference are as follows 8:—(1) there is no elision of caseendings in a sentence as in a compound; (2) in a sentence other words (adjectives) are allowed intervene between such mutually expectant words as rājāah rddhasya purusa iti, but such is not the case in regard to the compound $r\bar{a}japurusah$; (3) in a sentence hardly any restriction as to the syntax or order of words, but one cannot possibly alter the order of a compound without substantial change of meaning; (4) in a compound

¹ इह समानार्धेन वाकीन भवितव्यं समासेन च !-Mababhasya.

[े] ऐकपदासैक खर्री मेकविमक्तिकालं च चर्वेदैकाधीं भावे इप्यते। — Kaiyata.

³ सुदलीपी व्यवधानं यघेष्टमन्यतरेणाभिसम्बन्धः स्वर इति !—Mahābhāşya, Vol. I, p. 162.

there is only one accent and not two as in the sentence $r\bar{a}j\bar{n}ah$ purusah. It might be, however, observed here that these special features, as enumerated above, are not really brought about by $ek\bar{a}rth\bar{a}bh\bar{a}va$ or oneness of the sense, but they, strictly speaking, represent the result of Patanjali's interpretation.

Then, Patanjali continues to point out other points of difference between ryasa and Samāsa1: (i) there is difference of number in a sentence, as rājāah purusah, rājāoh purusah, rājnām purusah, but no such disterence is comprehensible in the compound (raignurusah); (ii) the meaning of a sentence is clear. while that of a compound is sometimes ambiguous (the reverse of the case is also possible, viz., a compound appears to be sometimes more clear than a sentence); (iii) an upasarjana or subordinate member is allowed to have a qualifying adjunct (rddhasua rainah puruşah) in a sentence, whereas there is a positive restriction that a member of the compound cannot have grammatical connection with an adjective lying outside the compound. This also, to speak the truth, does not constitute a special feature of Samasa, because compounds in Devadattasua gurukulam, etc., have already been declared admissible on the ground of expressiveness (gamakatva); (iv) ca is used in a sentence

² संव्याविशेषो व्यक्तासिधानसुपसर्जनविशेषणं चयोगः (—Mahābbāsya, Vol. I, p. 362.

(in the sense of collection), but not in a compound.

Some explain, on the other hand, 'mutual as the proper implication of connection' sāmarthya; the expression 'mutual connection' should not be, however, misunderstood as referring to words (reciprocally expectant words), but as pertaining to their meanings.2 When, vyapekṣā (mutual connection) pertaining to the meaning is thus held to be the denotation of sāmarthya, both the king and the man, as in rājñah puruşah, seem to be related to each other. The king 3 is connected with the man as the master (mamāyamiti), and the man also gets himself related to the king on account of his being dependent on him (ahamasya). The genitive is thus indicative of the relation between them. The older grammarians are supposed to have been in favour of vyapeksā as an indispensable condition of Samāsa.

In course of interpreting the rule 2.1.1 (Pāṇ.), Patañjali has referred to various standpoints regarding the characteristics of Samāsa. If Samāsa is considered to be a vṛtti (i.e., if it, as a rule, always brings out a specific signification),

परस्परव्यपेचां सामर्थमेके ।—Mahābhāşya.

² Mahābhāṣya, p. 365. का पुन: शब्दयोर्च्येपेचा ? न ब्र्म: शब्दयोरिति; किं तर्हि ? अथेयो: I—Mahābhāṣya, p. 365.

उ दह राजः पुरुष द्रत्युक्ते राजा पुरुषमपेचते समायमिति, पुरुषोऽपि राजानसपेचतेऽहसस्येति। तयोरभिसन्तस्य षष्ठी वाचिका भवति।—Mahabhasya, under the rule Pap., 2. 1. 1.

these views, holds Kondabhatta, are, by minute examination, reducible to two only, namely, jahatsvārthā and ajahatsvārthā.

The three views mainly discussed in the Mahābhāṣya are as follows;²(i)ekārthībhāva or the unity of meanings takes place in a compound as the salient characteristic, but a vigraha (sentence) comprehends vyapekṣā or vyapekṣā is found to be the primary condition of a sentence; (ii) on the assumption of vṛtti, Samāsa will fall under the category of either jahatsvārthā or ajahatsvārthā; (iii) just as vyapekṣā or mutual connection is necessary in a sentence, so it is in a compound, i.e., some hold vyapekṣā (as the real meaning of sāmarthya) to be the main factor that goes to form a compound.

Kaiyata, like Patañjali, supports ekārthībhāva as the most plausible view from the standpoint of the grammarians who ascribe eternality to \$abda. He argues further that the question of vṛtti, as shown above, is absolutely immaterial to those who take a sentence as containing no parts (niravayava), and look upon \$abda as eternal. The division of vṛtti into jahatsvārthā and ajahatsvārthā represents the view of those who take \$abda to be kārya.

Vaiyākaraņabhūşaņa, Kār. 30.

श्रद्धं तावद्वाये पच्छिटः प्रतीयते । समाश्रद्धार्थे मानः, विषष्ट्याये च व्यपेर्वेकः पचः । चद्य ये हिंचं वर्तयित द्रव्यारम्य जष्ठतृस्वार्याज्ञदत्सार्या चीत पच्छित्वेन मतासरम् । समाश्रदाविप वाक्यवद्यपेषेव सामर्थिमिति चापरं सतम् ।—

Samāsa is a vṛtti, that is to say, Samāsa is attended with a special significance. Vrtti is of two kinds, namely, jahatsvārthā and ajahatsvārthā. According to the standpoint of jahatsvārthā-vṛtti, the members constituting a compound generally give up their particular meanings and the compound necessarily acquires a special signification. This special sense may be produced either by śakti (denotation) or by lakṣaṇā (implication), the former helps us in getting the united meaning (ekarthibhāva) and the latter is resorted to in case of vyapeksā. Patañjali has here made use of a very well-chosen example to show the nature of jahatsvārthā. 'A carpenter,2 for instance, when engaged to perform the work of a king, is compelled to give up his own work to a certain extent.' So far as the other form of vrtti is concerned (ajahatsvārthā), the members of a compound continue to retain their respective meanings; as, for instance, 'a beggar 3 does not necessarily leave off what he procured first even when he happens to secure alms for the second time.' But there is some difficulty in accepting this standpoint as a reasonable one. The compound form should necessarily have the dual number, if each of the members

¹ परार्थाभिधानं इति:। परस्य शब्दस्य यीऽर्थनस्याभिधानं शब्दान्तरेण यच सा हत्तिरित्यर्थ:।—Kaiyaṭa.

[ै] तचा राजनर्भणि प्रवर्तमान: खं नर्भ जहाति।—Mahābhāṣya, Vol. I, p. 364.

[े] भिचनोऽयं दितीयां भिचामासाय पूर्वां न जहाति ।—Ibid, p. 365.

(rājan and puruṣa) were allowed to retain their respective meanings.

Patañiali has thus examined the validity of several views in regard to the exposition of samarthya and advanced arguments as well as counter-arguments either to support or to reject them. But the question that still awaits solution is to determine which of these two views is really acceptable from the standpoint of grammar, and appeals more to reason. In view of the emphasis laid on the charthibhava, it is clear that Patañjali accepted it as the most correct explanation. From what we have been able to gather from his lengthy discourse on the rule samarthah padavidhih, it appears that Pataniali, whose decision is held to be authoritative on all problems of grammar, was in favour of the ckarthibhava 1 point of view (or jahatsvārthā). The ekārthībhāva view, it must be remembered, is also the only reasonable explanation so far as the psychological aspect of Samūsa is concerned. According to Haradatta, both nyapekşā and ekūrthībhāva are necessary in a compound. In the absence of vyancksa or mutual connection, words are not allowed to form a compound.

Patañjali 2 has, however, drawn attention to the fact that jahatsvārthā does not mean

इड व्यपेषायां समासी न भवति, एकार्यीभाषे वाकां निति।—Kaiyeta on वावषनानवंदाम्।

that the constituents of a compound are liable to give up their respective meanings altogether. But only that sense which is found to be inconsistent with the specific signification $(par\bar{a}rthavirodh\bar{\imath})$ as denoted by a compound, is forsaken. This is why the expression $r\bar{a}japuruṣo \bar{a}n\bar{\imath}yat\bar{a}m^{1}$ does not simply mean the bringing of a man, but particularly the man having relation with the king.

Sāmarthya has been explained by some as pertaining to vṛtti. According to this view, difference (bheda) as well as association (saṃsarga) are the meanings of sāmarthya.

Patanjali has raised another question which is not less important in connection with Samāsa. A compound is generally said to be optional, that is to say, we may have either a Samāsa as rājapuruṣaḥ or a sentence like rājnaḥ puruṣaḥ without any change of meaning. To form a compound, or to use the compound-form depends upon the desire of the speaker. This view does not carry much weight with Patanjali. What he means to say is this: there are practically two views, namely, vrttipakṣa, i.e., compound and avrttipakṣa, i.e., sentence. Both the sentence and the compound have their distinct characteristics fixed by nature, and there is nothing to confuse the one with the other.

² भेदसंसर्गों वा सामर्थ्यमिति अपर श्राहा—Ibid.

³ स्त्रभावतश्चेतद्भवति वाकां च समास्य (—Mahāhhāṣya under the rule Pāṇ., 2. 1. 1.

Kaiyata' clearly shows the difference between a sentence and a compound by stating in clear terms that no compound is admissible in case of vyapeksā, and, therefore, a sentence is impossible when ekārthībhāva is intended to be implied.

It must be noticed that the view held by Haradatta goes against such a rigid distinction. Some hold, on the contrary, that ekarthibhava, vyapeksa and ajahatsvārthā vrtti are all that is required in the formation of a compound.2 Those who hold the non-eternality of sabda a are of opinion that compounds are capable of being formed optionally out of sentences, the formation of compounds being a matter of option with them. Those who, like the grammarians, maintain that sabda is a permanent entity 4 (naityaśabdika) opine that sentences and Samāsas materially different, that is to say, Samāsas represent a permanent combination of words, for they are so fixed by usage that they do not admit of any decomposition. To be more clear, the drift of Patanjali's argument is that the so-called process of disjoining a comnound into vuasa or vigraha (whereby a compound is dissolved into its elements) is at best

- ¹ इह व्यपेचाया समासी न भवति, एकार्यीमावे वाका नैति ।—Kaiyata
- ³ तथारिकार्थीभागेव्यपेचाइनस्त्र्यार्था चीत वर्ध समुभितं परिभाशप्रहात्तस्तु,। —Varyakaranabbuşana, under Kar, 30

artificial, and that recourse is taken to such a method only for the purpose of bringing out the signification of a compound which is really an indivisible unit of speech. This view is analogous to what we have already referred to in deciding the priority of samhitā to padas (padaprakṛtih samhitā). Further light is thrown upon this view by the so-called nitya-samāsas, because we are not allowed to disjoin a compound like krsnasarpah (as we cannot do so without altering the sense); this class of compounds is not capable of being broken up into parts without necessary change meanings. They do neither admit of vigraha in the usual way, nor are their meanings directly expressed by their component parts, but some other words are required to bring out their signification (avigraha or asvapadavigraha).

Bhartrhari has also shown the difference between a sentence and a compound. Samāsa is held to be an indivisible unit and the so-called vigraha is after all an artificial method that serves to bring out the meaning of a compound to unintelligent people. Durga has tato'nyat vākyamiti, which implies that a compound is distinct from a sentence by its very nature. There are, so to speak, two

¹ श्रविधान् प्रत्यपायाश्च विचिवाः प्रतिपत्तये। शब्दान्तरत्वादत्यन्तं भेदी वाक्य-सनासयोः।—Vakyapadīya.

different views on Samdsa, 1 namely, (i) a compound is a permanent unit of speech; (ii) a compound 2 is only a condensed form of a sentence, or, in other words, a sentence is reduced to a compound-form for the sake of brevity or conciseness. Patañjali and his followers seem to have supported the first view Others hold that there is no material difference between a compound and a sentence, that is to say, Samūsa is a designation that may be optionally applied to a sentence under certain conditions.

Samāsa depends more or less on current or popular usage. According to Durgasinha, Samāsa ³ is sometimes permanent or obligatory (as in krṣṇasarpaḥ), optional in the majority of cases, and is not admissible in some instances (Rāmo jāmadagnyah). A Samāsa is called nitya or obligatory, when its constituents foil to express the intended sense, as, for instance, the members of the compound krṣnasarpah mean simply a black serpent by their respective powers of denotation, but it is far from being the actual sense, viz., 'a snake that cannot be subdued either by medicinal herbs or by snake-charmers.' 4 An optional

artificial, and that recourse is taken to such a method only for the purpose of bringing out the signification of a compound which is really an indivisible unit of speech. This view is analogous to what we have already referred to in deciding the priority of samhitā to padas (padaprakrtih samhitā). Further light is thrown upon this view by the so-called nitya-samāsas, because we are not allowed to disjoin a compound like kṛṣṇasarpaḥ (as we cannot do so without altering the sense); this class of compounds is not capable of being broken up into parts without necessary change meanings. They do neither admit of vigraha in the usual way, nor are their meanings directly expressed by their component parts, but some other words are required to bring out their signification (avigraha or asvapadavigraha).

Bhartrhari has also shown the difference between a sentence and a compound. Samāsa is held to be an indivisible unit and the so-called vigraha is after all an artificial method that serves to bring out the meaning of a compound to unintelligent people. Durga has tato'nyat vākyamiti, which implies that a compound is distinct from a sentence by its very nature. There are, so to speak, two

¹ श्रवुधान् प्रत्यृपायाय विचिनाः प्रतिपत्तये। श्रन्दान्तरत्वादत्यन्तं भेदी वाक्य-समासयीः ।—Vākyapadīya.

different views on Samasa, namely, (i) a compound is a permanent unit of speech; (ii) a compound is a permanent unit of speech; (ii) a compound is only a condensed form of a sentence, or, in other words, a sentence is reduced to a compound-form for the sake of brevity or conciseness. Patañjali and his followers seem to have supported the first view Others hold that there is no material difference between a compound and a sentence, that is to say, Samāsa is a designation that may be optionally applied to a sentence under certain conditions.

Samāsa depends more or less on current or popular usage. According to Durgasinha, Samāsa is sometimes permanent or obligatory (as in krsnasarpah), optional in the majority of cases, and is not admissible in some instances (Rāmo jāmadagnyah). A Samāsa is called nitya or obligatory, when its constituents fail to express the intended sense, as, for instance, the members of the compound krsnasarpah mean simply a black serpent by their respective powers of denotation, but it is far from being the actual sense, viz., 'a snake that cannot be subdued either by medicinal heibs or by snake-charmers.' An optional

compound means that we are allowed to say either rājapuruṣaḥ or rājñaḥ puruṣaḥ, the former having only the advantage of concise-According to this point of view, most cases of compounds are simply dependent on option. Samāsa is grammatically inadmissible in where padas are so related to those cases each other that they cannot give rise to any special signification $(par\bar{a}rth\bar{a}bhidh\bar{a}n\bar{\sigma})$.

It should be particularly explained here what is really meant by holding Samāsa to be a vṛtti. Vṛtti means, as Patanjali maintains, 'the power of expressing the sense that is different from those that are denoted by the members of a compound,' that is to say, Samāsa is expressive of some special or additional signification.

Patañjali has dealt with the problem of Samāsa with such elaboration in and such details that his minute successors had no room for making further contributions to the subject. In a number of popular kārikās. Śrīpati 1 has carefully summarised all that can concerning Samāsa in general. Jagadīśa's 2 definition and exposition Samāsa are such as to show that followers of the Navya-nyāya considered a compound to be the same as a sentence, though

प्रतियोगिपदादन्यत् यदन्यत् कारकादपि। हत्तिग्रन्दैकदेशार्थं सन्वन्सस्तेन नेष्यते ॥—Kāt. Pariśişta

यादृशस्य महावाक्यसान्त ह्वादि निंजार्थके । यादृशार्थस्य धीहेतु: स समासक्तद-र्धन: ॥—Sabdasakti., Kār. 31.

in a condensed form, and, unlike the grammarians, they did not necessarily recognise the special signification of Sanara

In course of showing the applicability of his definition to all cases of Samāer, and dealing particularly with certain arregular forms of compound, Jagadisa has made some important observations which one can hardly afford to pass over for an adequate knowledge of the subject. We give below only a few instances of Samīer where Jagadisa has given a stump of his originality of exposition.

- (i) The rigidad' (the sentence whereby the meaning of a compound is usually expressed) should be such as would bring out the entire meaning of a compound, but there is no such rigid condition in the case of a compound. It is generally found that a compound-form does not contain anything to give an exact idea as to the precise number and gender of the rigidad. Thus, Jagadist refutes the view that 'both vyāra and Samāsa are exactly expressive of the same sonse'.
- (11) In cases other than those of Nipūtas, the meanings of two Namans (words) are related to each other as if they were identical 2
- (iii) As the genitive (denoting relation) is dropped in a compound like rajapurusah (as a

निवातातिरिक्तस्यक्षे नामावयोरभेदास्यस्याय्यत्पद्मसम् ।—Ibid

necessary condition of $Sam\bar{a}sa$ in general), the Naiyāyikas ¹ have taken recourse to $lakṣaṇ\bar{a}$ to expressly indicate the relation of puruṣa with $r\bar{a}jan$.

- (iv) Though Karmadhāraya compounds having pronoun like yad and tad as their last members are not generally recognised by the grammarians, Jagadīśa has supported the validity of such a compound as paramasah on the authority of Jumaranandī.
 - (v) If a compound is allowed to be formed by the combination of more than two padas, it should be either Dvandva or Bahuvrihi, i.e., excepting these two compounds no other compounds are generally found to consist of three or more members.
 - (vi) An anomaly is presented by the expression karmacāṇḍālayogotham, because yogotham (resulted from the conjunction) cannot be grammatically taken here as an adjunct qualifying pāpa (sin) which forms a part of the compound pāpakṣayaḥ. Jagadīśa meets this position by suggesting that yogotham should be taken in the sense of yogaprayojyam (i.e., resulting from a conjunction of Rāhu with either the sun or the moon) which might be

³ वहपदे वहुन्नीहिरेव नेतरो इन्दान्य: ससास: ।—Ibid.

consistently connected with the meaning of pāpakṣaya by the relation of identity.

(vii) As Dvigu² and Karmadhāraya compounds are found to have a striking similarity between themselves from both physical and psychological aspects (each having the first member as an adjective and both indicating the relation of identity) only with this difference that in cases of Dvigu the first pada is a numerical adjective, Jagadīša has no objection in including Dvigu within the category of Karmadhāraya.

On the evidence of the rule Pāu. 2.1.23, Bhattoji also speaks of both Dvigu and Karmadhāraya as two special classes of Tatpuruṣa, taking a wider view of the latter.

(viii) According to Jagadīša, a Tatpuruṣa compound, with an adverb as its first member, is also admissible. He recognises stokapaktā as an instance of Karmadhāraya. But there is some difficulty in explaining the compound as such, because the meaning of the adverb stoka (little) is not such as may have the relation of identity (tādātmya-sambandha) with that of

[े] योगोत्यमिन्यम्य योगप्रयोज्यमिन्ययः, स चामेर्रेन पापचयेऽस्तितः।— Sabdasakti.

² हिंगी. कर्मधारयानगैतलेऽपि न चिति: |-Ibid, under the Kar, 38.

तत्पुरपविभेषः कमं धारय सहिभेषो हिगः।

क्तिजपळिलादी किवाबिमेपणै: कर्मधारय एवः मध्यक्तिमें श्लाविक इलादी किवितादाविय.....मार्थिकदेश प्रचादावपत्नामार्थणभिदालयवोषकत्या स्यालसम्भवात — Babdasaktiorakasika under Kar. 39,

paktr (one who cooks). As a matter of fact, the adverb is really connected with the action (cooking) and not with the agent. Here Jagadīśa has been compelled to admit the validity of nāmārthaikadeśānvaya, that is, the relation with a part of the meaning of a Nāman, and, accordingly, suggests on the strength of such mahākavi, mahāvijna (where examples as mahattva or greatness refers respectively to the state of being a poet and that of being wise, that the adverb stoka is related to pacana (cooking) which forms part of the meaning of paktā.

- (ix) By supporting such expressions as stokanamrā stanābhyām (as used by Kālidāsa), Jagadīśa has sought to refute the view that 'no compound whatsoever is admissible with an adverb.
- (x) Jagadisa has thoroughly rejected the grammatical definition of Avyayībhāva compound, as it involves the fallacy of avyāpti. It is not strictly correct to say that an Avyayībhāva compound has always an indeclinable as its prior member, for, in instances like śalākāpari, akṣapari,2 etc., we find an indeclinable as the last member; again, trijamunam (a collection of three Jumnas),

¹ क्रियाविशेषणै: समास एवाव्युत्पन्न इति तु न देश्यम्।—Sabdasakti under Kār. 39.

अचपरि श्लाकापरि—इल्यायव्यशीभाविऽव्याप्तिस्याव्ययगर्भेलेऽपि तत्पूर्वकला-भावात् ।—Sabdasakti.

lohitagangam (the country where the Ganges is red) are examples of Avyayibhara where no indeclinable is traceable '

There is evidence to believe that it was accent that determined $Sam\bar{a}sa$ in the early stage of the Sanskrit language. A slight defect in the use of accents is said to have proved fatal to the sacrificar himself. What an important part was played by the variation of accents in the determination of $Sam\bar{a}sas$ is best illustrated by such examples as trimum (vyakaranam) which with slight difference of accents may be taken either as $Avyay\bar{\imath}bhava$ or $Bahuvr\bar{\imath}hr$ compound

The ancient grammarians are said to have divided Samasas into four classes according to the predominance of the meanings of members forming the compound. The principle underlying these classifications, as we shall see liter on, is connected more with the meaning than with the physical aspects of Samāsas. They are as follows (1) pūrvapadār thapr adhāna as Avyayī-bhāva—in this class of compounds the meaning of the first member (indeclinable) seems to be principal in relation to that of the last, (11) uttar apadas thapradhana, 1e, Tatpunusa—it is so called because in all varieties

¹ एतेष्वययर्गभैतस्याध्यभावात्।—Sabdafaktı p 52

[°] दुष्ट गब्द खरती वर्णती मा निष्या प्रयुक्ती न समर्थमाह। स बाग्वकृ यजमान हिनसि यथिष्ट्रभन्न स्वरतीऽपराधातृ॥ Sikea

इह कथिन समास पूर्वपदार्थप्रधान , कथिदुत्तरपदायप्रधान , कथिदन्यपदार्थं प्रधान , कथिदुन्यपदार्थं प्रधान , कथिदुन्यपदार्थंप्रधान , कथिदुन्यपदार्थंप्यपदार्थंप्रधान , कथिदुन्यपदार्थंप्रधान , कथिदुन्यपदार्यपदार्थंप्रधान , कथिदुन्यपदार्यपदार्थंप्रधान , कथिदुन्यपदार्थंप्रधा

of Tatpurusa compounds the meaning of the last member appears to be predominant; (iii) anyapadārthapradhāna, i.e., Bahuvrīķi—the characteristic feature of this class of compounds (anekamanyapadarthe) is that the sense of a word that does not actually enter into the combination comes to have the predominance; (iv) sarvapadārthapradhāna as Dvandva, where the meanings of all members are of equal importance. Following the classifications of earlier grammarians such as Vābhata 1 and others, Jagadīśa has made an addition (madhyapadapradhāna) to the aforesaid division of Samāsas as given by Patanjali. Tatpuruşa compounds like ghațānadhikaraņam and pratiyogitanavacchedakah, etc., are explained by instances wherein the Jagadīśa as sense middle pada (i.e., non-existenceof the denoted by the negative particle na) is accordingly, predominant, and he. them madhyapadārthapradhāna, On a close examination of facts it is, however, found that these classifications of the earlier grammarians are neither sufficient to cover the entire field, nor free from the fallacies of ativyāpti and avyāpti. Bhattoji 2 has clearly pointed out how the principle underlying such divisions cannot be applied to instances like atimālah, unmattagangam,

पूर्वमध्यान्यसर्वान्यपदप्राधान्यतः पुनः। प्राचौः पचिविधः प्रीतः समासी नाभटादिभिः॥ Sabdasakti, Kār. ३३.

² समास्यतुर्विष इति तु प्रायीवाद: ।-Bhattoji.

otc., from a strictly grammatical point of view. In conformity to the rules of grammar, atimālaļi is taken to be an example of Tatpuruṣa, though the sense of the first member in this case appears to be the principal one. Thus, the predominance of the sense of the first member of a compound cannot be grammatically regarded as the only criterion for determining an Avyaytbhāva compound.

According to the popular divisions, Samūsas are six in number, or seven by the inclusion of the so-called Upapada compound. Some gram marians, however, interpreted the rule us un. Pāṇ., 2.1.4, in such a way (applying the principle of yogavibhāga) as to establish six i different kinds of Samūsas; the peculiar among these being the compound made of two verbal forms as khādatamodatā on the strength of the gaṇasūtra—ākhyātamākhyātena kriyūsūtatye.

According to Jayāditya, Samāsas are capable of being divided into two well-known classes, namely, nitya and anitya. Anitya-samāsas are those where the addition of the case-terminations to the members of the compound is sufficient to bring out the sense, as, for instance, the genitive and prathamā respectively in rājāaḥ and and puruṣaḥ are competent to express the meaning of thee ompound rājapuruṣaḥ. In the case

मुपां सुपा तिङा नामा धातुनाय तिङा तिङा। सुवन्तेनिति विज्ञे यः समागः पङ्विधो बुधैः॥

विभक्तिमावप्रचेपादिजान्तर्गतनामसः ।
 स्वार्थस्थावोधवोधान्यां नित्यानित्यौ समासकौ ॥

of nitya-samāsas, on the other hand, the mere addition of the case-endings to the constituent elements cannot fully bring out the sense of the compound, for by simple analysis of the compound kṛṣṇasarpaḥ as kṛṣṇaścāsau sarpaśceti (meaning any and every kind of black serpent) one cannot get into the meaning of the compound (i.e., a snake irresistible either by medicinal herbs or physicians).

The most important question that deserves to be particularly considered in connection with the problem of Samāsa is to decide whether the sense denoted by a compound is virtually the same as is expressed by the constituent members, or a compound has by nature the power of expressing a special signification distinct from those of its members. This is a problem over which the grammarians and the Naiyāyikas hold different views. Jagadīśa¹ has referred to Patañjali and his followers as samāsa śaktivādins, who do not take number to be the denotation of a compound, specially aluk-samāsa, inspite of the presence of the case-endings that indicate number (as in kanthe-kālaḥ).

Reference has already been made to the two views— $ek\bar{a}rthibh\bar{a}va$ and $vyapeks\bar{a}$; the grammarians evidently uphold the former (as it is quite clear from the interpretation of the Mahābhāṣya), while the Naiyāyikas and the

¹ व्यञ्जनसुप: सन्तेऽपि संख्या न बुध्यते इति समासश्तिनादिन: पातञ्जला:। — Sabdasakti.

Mīmāmsakas seem to have supported the latter. The main point at issue is that the <code>chārthf-bhāvavādins¹</code> are of opinion that a compound as a whole has the distinct power of expressing a sense in addition to the meanings usually signified by the members,² whereas the <code>vyapekṣāvādins</code> have either taken recourse to <code>laksanā</code> wherever the members of a compound are not likely to bring out the full signification or have taken the sense of a compound as exactly equivalent to those of its members.

The arguments usually advanced in favour of the ekārthībhāvā view are as follows:—a compound-form like citraguh (Bahuvīhi naturally indicates 'the owner of handsome cows;' rājapurusah means 'one having relation with the king;' upakumbham gives the idea of 'proximity with a pitcher' and pānipādam expresses the sense of a 'collection of hands and feet'(samāhāru). These meanings, to speak the truth, are not directly expressed by the members of those compounds; as, for instance, the sense of the 'owner' is not denoted by either citrā or go, the idea of 'relation' is not brought out by either rājan or purusa, and 'collection' by either pāni or pāda

¹ एकाधींआपे समास एक संग्रहोतो न व्यपेचायामिति आवादेकाधोंआव एव सिंदान्तसम्बत, । राज पुरुष इति वाक्यात् प्रतिपादाधंग्य विशिष्टक्षेण शक्या प्रति-पादन च तत्त्वमिति समाधि इदि निधाय साध्यकारमत समास्वेदतिरिक्ता शक्ति साध्यम् समग्रैयते (—Vayakarapabhūsana

समास खलु भिदेव याक पडलपण्डला । यहना हिस्समीणा वचनेरेव साधने । स्थान्य इन्गीरवं तलादिकार्थीभाव पात्रित ॥—Valyakaranabhüşana, Kar 31

and so on. The grammarians have, therefore, assigned the power of expressing such special or additional senses as those of 'owner,' 'relation' and 'collection,' etc., to the compounds, taking Samāsa as a whole or an indivisible unit of speech.

The word pankaja admits of double meanings—one as 'lotus' signified by samudāyašakti and the other as 'something that grows in the mud' (avayavašakti) denoted by its parts. Similar is the case with a Samāsa; it has one meaning as is denoted by its parts and the other as expressed by the whole. According to the Naiyāyikas, the word pankaja falls under the category of yoga-rūdha, that is to say, it has two-fold signification as denoted by the parts and the whole. The grammarians have recognised such a samudāyaśakti in order to arrive at the additional sense of a compound.

Moreover, the ekārthībhāva view is not vitiated by prolixity or gaurava as is the case the vyapekṣāvāda. The Naiyāyikas¹ or with the vyapekṣāvādins, on the contrary, are not prepared to admit of such śakti or power of expressing the additional sense so far as compounds are concerned. They have rather taken recourse to lakṣaṇā whenever they failed to get the intended sense directly from the members of a compound. They have, for

¹ व्यपेचावादिनो नैयायिकादय:। न तावहहुनीही ग्रांतार्जचणयैवीपपत्ते:। -Vaiyākaraņabhūşaņa.

instance, resorted to laksanā in the case of citraguh so as to obtain the sense of the 'owner.' Kondahhatta maintains that in such cases the assumption of &alti1 is almost unavoidable, since lahsanā in regard to either citrā or go is not sufficient to bring out the full signification, i.e. the owner of beautiful cows. But there is some difficulty in the way of applying such laksanā,2 for, if the word 'citrā' were indicative (laksaka) of 'the owner of the beautiful cows, 'it would have no consistent relation with the meaning of the word go; again, if the word go were to indicate the same sense, the meaning of the word citra would not be compatible with that of 'the owner' (because it is not the owner who is citra or handsome but his possessions-the cows). In a Tatpuruşa compound such as a ajanurusah. Gangesa says that laksana is to be attributed to the relation as is denoted by the genitive in rainah. According to the Mimamsakas, the whole sentence should be taken as laksanā or indicative (as Gangeśa has clearly pointed out).

¹ चित्रगुरित्यादी खाम्यादिप्रतीतये यक्तिरावग्यकी, भ च खचण्या निवाह:।
—Vaiyakaranabbüşana onder kår 81

[ै] न च विवापट विचतीस्त्रामिलवक, तव गीपदार्थानन्यात्। नापि गीपट लचक गीस्त्रामिनि चित्रापदार्थानन्याप्ते।—Tattvacintamanı—Sabdakhanda, p 702

[•] तत्माद्यात्रार्थीचभगीसन्तित्वया पुरुषस्य प्रशीतिषेष्ठतीशी वाको एव खचयेति।— Tattvacintamanı—Sabdakhanda, p 737.

The Naiyāyikas have, however, resorted to lakṣaṇā in regard to only one pada, either citrā or go, and taken the other as only suggestive or tātparya-grāhaka, as in rājapuruṣaḥ the word rājan is said to be indicative of the relation with the king and so on. They do not, therefore, agree with the Mīmāṃsakas so far as the indicativeness of the whole sentence is concerned. It is specially in the case of Bahuvrīhi and Tatpuruṣa compounds that they have taken the help of lakṣaṇā for the purpose of getting the intended sense. It is not necessary to resort to lakṣaṇā in a Karmadhāraya compound,² where the sense of identity is derivable from the very relation of meanings.

The expressions niṣādasthapatim yājayet, varṣāsu rathakāro'gnimādadhīta have given rise to considerable difficulties. The Mīmāṃsakas do not take niṣādasthapati as an instance of Tatpuruṣa (as in that case lakṣaṇā is to be resorted to) but construe it as a Karmadhāraya compound (niṣāda eva sthapatiḥ) identifying sthapati with niṣāda (the architect who is one and the same as niṣāda).

CHAPTER IX

GRAMMAR IN OTHER SYSTEMS OF THOUGHT

Language and Grammar-problems of grammar in the Mimania-Nyaya and treatises on Alarikara.

Grammar is a popular branch of study. Consciously or unconsiously, every one makes use of grammar or follows certain principles in the verbal expression of his thought. Man as a speaking animal is first acquainted with grammar, though he does not know that the way in which he combines one word with another presupposes a number of principles upon which is based the science of grammar. Grammar has its origin in the popular mode of expression, and derives its vital essence from the popular usage. Grammar, particularly Sanskrit grammar, is indispensably necessary for an adequate knowlege of all branches of literature. Bhartrhari calls it adhividua in order to point out that grammar is intimately connected with all branches of learning, and in consequence of this intimate relation it is held to be the most useful of all departments of studies.2 One

¹ पवित्रं सर्वेवियानामधिवियं प्रकाशते ।-Vākyapadīya, Kār. 1. 14.

^{*} तहैव खीकी विद्यौनासेवा विद्यापराययम ।-- Ibid.

can hardly expect to make a profitable study of any branch of Sanskrit literature without having a thorough knowledge of grammar. Grammar, Patanjali rightly observes, is a useful companion to the study of the entire Vedic literature.

Speculations on grammar naturally presuppose the existence of language; and the relation in which the study of a language stands to that of its grammatical system is an intimate one. The grammar of a language generally makes its appearance when that language in particular has reached a certain stage of development and produced literary records comprising a vast field of knowledge. Based as it is on the strictly scientific method of generalisation (utsarga) and particularisation (apavāda) on the one hand, and that of agreement (anvaya) and difference (vyatireka) on the other, Sanskrit grammar is found to have thrown much light upon what are known as the fundamental problems of philology. Moreover, the rules of Sanskrit grammar, as they unfold the laws that regulate the growth, formation and correctness of the recognised linguistic forms, are in themselves short formulæ of the science of language. Again, the rules, such as sannikarşah samhitā (Pāņ., 1.4.109) akah savarne dīrghah (Pān., 6.1.101), which

^{&#}x27; सर्वेवेदपारिषदं द्वीदं शास्त्रम्।--- Mahābhāṣya. under the rule Paņ., 6.3.14,

virtually show the tendency of two vowels having close proximity and homogeneity to lengthening, are as much phonological as grammatical. There was, as we have already pointed out, a period in the history of the Sanskrit language when, in the absence of such technical devices of grammar, Samāsas had to be determined by different modulations of voice. The division of sound into udātta, anudātta and svarīta, the transformation of sounds as is illustrated by the rules of samprasārana, and the principles of euphonic combination (sandhi) are indication how intimately grammar is related to phonology.

The study of Sanskrit from a philological basis and that of the methodology of its grammatical systems present before us problems of Semantics which, as a cognate science, deals with the psychological aspects of language. The science of meaning, though of comparatively modern growth in the domain of western philological researches, seems to have already developed into a scientific branch of study at the hands of the Nairuktas or etymologists. The antecedence of ideas to words, the relation between the sign and the object signified, the eternal 2 connection between \$abda and artha,

¹ षर्वतस्य शब्दम्यीत । वर्धे सम्बाद्यविद्यानीति मन्द्रः प्रयुक्तते।—Mabābbasya, Vol II, p 16 सर्वे हि मन्दीऽर्धमस्यनार्धे प्रयुक्तते —Tantra-varttika, under 1, 3 8

[ं] चौत्पत्तिकम् ग्रन्थार्थेन सम्बन् — Mim Sütra, 1 1 5 सिन्ने ग्रन्थार्थ-सम्बन्धे and नियो द्वर्यवतामर्थेर्भसम्बन्धः (— Mahābhārya, Vol I, p 7.

the derivability of words 1 from verbal roots, the method of naming objects, the origin of certain words (as kāka, kokila, dundubhi, etc.) from an imitation of natural sound,2 and the way how words change their meanings (as kavi, mṛga, kuśala, pravīṇa, etc.) are facts that have been scientifically dealt with by the Nairuktas the grammarians. The etymological explanations of words, as they occur in the Brāhmaņa and Nirukta literature, is an evidence that investigation in the science of meaning was not only necessary for the proper understanding of the Vedic texts, but formed an important part of the study of Sanskrit grammar. Though an independent branch study mainly devoted to the psychological side of language, the Nirukta, as Yāska maintains, is materially akin to grammar, the former serving as a complement of the latter.3

In course of foregoing discussions on grammatical problems, we have had occasion to make reference to certain philosophical views, mainly from the Mīmāmsā and the Nyāya systems, having direct bearing upon problems of purely grammatical interest. As a department of study intimately connected with the process of thinking, grammar, like

¹ नामान्याख्यातजानीति शाकटायनी नैरुक्तसमयश्च (-Nirukta, 1. 12.

² काक इति शब्दानुक्रतिसदिदं शक्तिषु बहुलम्।—Ibid,

⁸ तदिरं विदाखानं व्याकरणस्य कात् सारं स्वार्धसाधकं च।—Nirukta, p. 115.

logic, deals with a subject (sabda and artha) that forms the very basis of knowledge. The supreme importance of Sabda-sāstra lies in the fact that it deals with words whereby we think, know and express our thoughts to others. Every word is a symbol of intelligence. No knowledge whatsoever, says Bhartrhari,1 is possible without words; knowledge of all denominations is materialised through the medium of words. Punyaraja 2 particularly points out that the use of words (sabda-bharana) nots as an important factor in the manifestation of qualified knowledge (savikalpakajāāna). An attempt is made here to show the extent to which grammar is related to other philosophical systems, specially the Mimamea and the Nyaya.

Certain Mimāmsā doctrines are found to have close relationship with those of grammar. (i) The eternality of Sabda (Sabda-nityatāvāda): The Mimāmsakas have not only accepted the eternality of words with all earnestness but have made it a fundamental tenet for defending the eternal character of the Vedas. It seems to have been on the part of the Mimāmsakas a pious necessity to maintain the eternality of words inspite of the arguments advanced by the Naiyāyikas. Unless words are held to be eternal, it is not

¹ न सीऽस्ति प्रव्यवी खोके यः शब्दातुगमाहते । सतुविद्यमित शानं सर्वे शब्देन भासते ॥—Vākyapadiya, Kār. 1. 124,

^{*} सा दि बादूपता प्रवासमां: संविकस्यकशान तत्समादिकेलाएं:-Pupyarkja under Väkyapadiya, Kör. 1. 125.

possible to establish the authoritativeness or trustworthiness of the Vedas which, as we find, consists of a huge collection of words representing the Mantras and Brahmanas. The Mim. Sūtras 6-11 are those that are usually put forward by the Naiyāyikas against the eternal character of words. The Mīmāmsakas had their arguments ready to refute those attacks one after another (Mim. Sūtras 12-19) in a manner that reflects much credit on them. final conclusion is arrived at by the statement 1 darśanasya parārthatvāt which means that words are held to be nitya on account of their being used for the purpose of signifying the sense. Words 2 do not, as the Naiyāyikas hold, exist only for a moment and totally disappear after the utterance is over, but continue to exist so as to express the intended meaning.

Grammar, as we have already shown, though based on a purely analytical method, has also established the eternality of śabda. But there is some amount of difference regarding the standpoints from which the eternality (nityatva) has been conceived by the Mīmāṃsakas and the grammarians. The Mīmāṃsakas take sound to be eternal, as it is manifested by the utterance

¹ नित्यस्त साहर्भनस्य परार्थवात्—Mim. Sütra, 1. 1. 18.

[ं] दर्भनसुचारणं तत्परार्थं परमर्थं प्रत्यायितुम्। उचरितमावि हि विनष्टें प्रव्ये प्रत्यायितुन्। उचरितमावि हि विनष्टें

GRAMMAR IN OTHER SYSTEMS OF THOUGHT 317

and is represented by the letters, whereas the grammarians have gone a step beyond sound as such and sought to find out the subtle element which is exactly manifested by sound, that is to say, they realised the existence of Sphola as the final cause of sound. The grammarians understand $V\bar{a}kya\cdot Sphola$ as representing the true type of $nitya\cdot \hat{s}abda$. A glance into the characteristic attributes with which $nitya\cdot \hat{s}abda$ is comprehended by Patanjali is sufficient to corroborate the view that Sphola to the grammarians was the same as Brahman to the Vedāntins.

(ii) The Mimāmsakas have agreement with the grammarians in regard to the relation of words with their meanings. The Mimāmsā Sūtra, 1. 1. 5, states expressly that a word (preferably those that represent the Vedic mantras) has inborn or eternal relation (relation that is permanently fixed) with its signification. The first Vārttika of Kātyāyana and the exposition of Patañjali thereon purport to establish the very same view so far as the relation of words with their meanings is concerned. The view of Kātyāyana as incorporated in the opening Vārttika goes to show that the grammarians used to look upon words, meaning and the relation as

वाक्यस्तीटमपरे (वैद्याकरणाः) संगिरने ।—Kaiyaja,

[ै] भू वं क्टस्यमिकाल्यनपायीपजनिकार्यतुत्पत्यहडाध्यययीगि यक्तद्वित्यमिति। —Mahahaşya, Vol. I, p. 7.

चौत्पितिकस्तु शब्दसार्थेन सम्बन्धः।

सिंहे शस्टार्थसम्बन्धे ।

permanently fixed (siddha). Patañjali 1 has expressly stated that a significant word is permanently related to its meaning. The relation of a word with its meanings is called nitya in this sense that it is found to be current in popular usage from time eternal 2 (anādi). This relation is grammatically known as śakti 3 or may be viewed as one of identity; a word is sakta, i.e., capable of denoting the sense, the meaning is śakya and the relation subsisting between them is called śakti or yogyatā.

(iii) The Mīmāmsakas agree with the grammarians in respect of the denotation of a word. The Mīm. Sūtra, 1.3.33, lays down that all words denote a class (ākṛti), the individual being comprehensible by means of mutual dependence 4 between the class and the individual or avinābhāva. The author of the Bhāṣya has clearly pointed out the difficulty that arises, if an individual only is held to be the denotation of a word. The two well-known grammarians, Vyādi and Vājapyāyana, held opposite views, the former advocating the class-theory and the latter supporting the individualistic one. The view of Panini, 5 as explained by

¹ नित्यी द्यर्थवतामर्थेरिभसम्बन्धः (—Mahābhāṣya, Vol. I, p. 7.

² सन्तन्तस्यापि व्यवहारपरम्परयानादिलान्नित्यता।—Kaiyata.

⁸ शब्दार्थयो: सन्बन्धय शक्तिरुपं तादात्मामिनेति |—Pradipoddyota.

^{*} श्राक्ततिर्हि व्यक्ताा नित्यसन्वसा।—Sabara-bhāşya.

⁵ उभयथा ह्याचार्ये ण स्त्राणि पाँठतानि ।—Mahābhāşya, Vol. I, p. 6.

Patanjali, is that both the class and the individual are denoted by words.

- (iv) In the Ślokavāttika, Kumārila has devoted a lengthy chapter to refute the theory of Sphota as expounded by the grammarians. As the theory of Sphota is apprehended to destroy the glorious edifice of the Vedas by declaring all divisions of sentences and words as merely artificial, the Mimāmsakas could not recognise the existence of Sphota apart from sound. The assumption of Sphota is thus untenable from the Mimāmsā point of view. So far as experience goes, letters that constitute a word are found to be significant, and it is, therefore, nothing but unreasonable to acknowledge an incomprehensible thing as Sphota, which is materially distinct from letters.
 - (v) There is a distinct section in the Mīmāṃsā Sūtras called vyākaranādhikarana dealing mainly with the problems of grammatical interest. The subject discussed in this particular section is almost the same as dealt with by Patañjali in the first āhnika of the Mahābhāṣya. The question 2 that presents itself for solution is to ascertain the reason for using words of purely Sanskrit origin. While correct forms (as qauh)

र दोषवडा गकारा देंगेवादे: प्रतिपादक:। भ्रुवं प्रतीयमानलात्तत्पूर्वं प्रतिपादनात् ॥—Slokavärttika, Kar. 186.

[ं] गोशब्दो यथा साखादिमति प्रमार्थ, कि तथा गाळादबोऽप्यु त नेति सन्देह:।— Sabara bbāsya, under 1. 3 25.

as well as the incorrect ones (as gavī, goņī, goņōtalikā, etc.) are found to be equally expressive of sense, it is really difficult to understand the import of the scriptural injunction 1 which unconditionally prohibits the use of corrupt words (apabhramśas). This prohibition seems to have been strictly followed by Sanskritspeaking Brāhmins, particularly at the time of sacrificial performance, lest the purity of their rituals might be vitiated by the utterance of corrupt words. These incorrect words, hold the grammarians, are distorted forms Sanskrit, this distortion or mutilation of forms being due to wrong imitation or inability of pronouncing the correct words of Sanskrit origin.2 The grammarians have drawn a clear line of demarcation between these two classes of words as the first and foremost function of the science of grammar.8 As it helps the discrimination of correct words, the science of grammar has been elevated to the dignity of Smrti by the Mīmāmsakas.

Though the meaning is equally expressed by correct and corrupt words, it is the use of correct words alone, holds Patañjali,⁴ that is attended with religious merits. It must be,

however, remembered that this principle of preferring the use of words strictly in conformity with the rules of grammar to those that do not come under the cognisance of grammar, is based on a purely religious consideration. How, then, are we to distinguish correct words from incorrect ones? According to the Mimamsakas, it is grammar or Vyākarana-smṛti that serves as the helping guide for such a discrimination. The rules of grammar are, therefore, held to be authoritative and a kind of trustworthy evidence.

(vi) The Mīmāmsā-Sūtra, 1.3.28, makes it clear that the origin of corrupt forms should be traced to natural inability to pronounce the correct words, and that the meaning is expressed by such distorted forms on account of structural similarity 1 with correct words. This view is exactly analogous to what is held by the grammarians in regard to the origin of apabhramsas. Pataujali 2 maintains apasabdas or perverted forms are the result of imperfect imitation and inhorn inoptitude. Bhartrhari has the following: Sanskrit is a divine tongue current from time immemorial; it has undergone distortion at the hands of those who failed to give utterance to the correct Sanskrit word by reason of their natural

incompetency. They are also significant like correct words, but their signification is a matter of inference, that is to say, they become significant only by recalling the corresponding correct words with which they have close resemblance.

(vii) In the bhāvārthādhikaraņa, there is a discussion as to whether noun or verb is related to the result $(ap\bar{u}rva)$. As it is produced by the action, apūrva is connected with the word indicating the verb and not with words denoting either substance or qualities.2 The Mim. Sūtra, 2.1.1, enjoins that all verbs should signify action. This view bears close comparison with the statement of Patanjali (kriyāvacano dhātuļi and bhāvavacano dhātuh). The view of the Mīmāmsakas regarding the meaning of the root and of the suffix (result and action pectively) is different from that of the grammarians.3 The Mīm. Sūtras, 2.1.3 and 2.1.4, give the definitions of nāman and ākhyāta respectively, which 4 remind us of the definitions suggested by Yaska. The Mim. Sūtra, 2.1.6. speaks of a twofold division of action, namely, primary and secondary, and the subsequent rules give their definitions.5

GRAMMARIN OTHER SYSTEMS OF THOUGHT 328

The Nyāya system, specially the Navyanyava has made valuable contributions to the study of grammar. The Naiyāyikas are credited with having expounded the most scientific theory about the origin of sound. To the Naiyayikas, śabda is a quality of the sky, i.e., space (sabdagunamākāšam). Though they have taken šabda as the product of human effort, the Naiyāyikas have included sabda or, more properly, verbal cognition, within the category of pramanas.1 In accordance with their view, sabda is liable to production and destruction 2-two important characteristics of all things that are kārya or non-eternal. They have sought to explain the relation between śabda and its meaning with reference to the will of God. Sakti or primary signification of a word is not determined, hold the Naiyāyikas, by social convention, but seems to have been fixed by the volition of God (sanketa) expressed in the following strain: 'let this word be denotative of this sense' (ayam śabdo'mumartham pratipūdayatu). According to the Naiyāyikas, Sābda-bodha or verbal knowledge is derivable from a sentence s and not from individual words: and so far as verbal cognition is concerned, the knowledge of

viśeṣaṇa¹ (adjective) must have precedence to that of viśeṣya (noun). They have made a distinction between Upasargas and Nipātas, holding the former to be indicative (dyotaka) and the latter as directly expressive of sense (vācaka).

Gangeśa's Tattvacintāmani is an epochmaking work, remarkable throughout by its originality of thought; it ushered in a new order of thinking that was readily assimilated by the later grammarians. The Tattvacintāmani is, indeed, a valuable record marking the height of perfection which the Indian thought had reached at that time. Scholars of outstanding genius such as Raghunātha, Mathurānātha, Jagadīśa and Gadādhara tried their level best to popularise this new school of logic following in the wake of Gangeśa. This work is divided into four parts dealing with perception, analogy, inference and śabda.

The śabda-khanda deals, among other things, with all important problems of grammar:

(i) it has established the trustworthiness of śabda as a pramāṇa; (ii) it has advanced arguments in support of the non-eternal character of śabda; (iii) it has shown how to determine the śakti or primary signification of words;

¹ नाग्टहीतविभीषणा बुिर्बावभीष्येषूपनायते and भान्द्वीधे प्राक्पतीयमानलं विभीषणत्वम्।

(iv) it has given an adequate treatment of Dhātu, Upasarga, Nipāta and Samāsa; (r) it has elaborately dealt with expectancy, compatibility, proximity and import is important factors of verbal knowledge, and (r) it has discussed the question of the origin of corrupt words (apablicamšas). How indispensable Jagadīša's Sabdasaktiprakāsikā and Gadādhara's Vyutpattivada are for the proper study of the philosophy of Sanskrit grammar has already been pointed out

In Grammar lies the origin of the science of Poetics. The Alamkara-kīstra is not less akin to Grammar than is the Nirukta. The contribution of grammar is nowhere so prominent is in this particular branch of study. The science of poetics may be and to have been principally based on grammar Sabda and artha not only form the subject of grammar but have also provided the fundamental base upon which stands the whole fabric of the Alamlara sastra. Vyakarana and Alamkara are organically connected and used to be studied in India as cognute departments of study.

The rhetoricians or Alimbaribas have extensively dealt with poetical compositions with special reference to their merits and defects Having regard to what constitutes the essence of poetry, they have expounded the doctains of vyanjana and made an elaborate treatment of rasa

Poetry is the outcome of joy. Endowed with the power of articulating his voice and born in the midst of magnificent beauties of nature, man feels naturally inclined to clothe his emotions in a rapturous and rhythmical language, seeking proper expression for the music of his heart and tending to give a poetic touch to his thought, when he is in an ecstasy of joy. Whether it is 'a spontaneous overflow of powerful emotions' or whether it 'makes us inhabitants of a world to which the familiar world is a chaos,' poetry appears to be the living manifestation of the internal storehouse of joy. Poetry has been rightly called hlādaikamayī, that is to say, 'comprehending joy alone, rising from a source that is often represented as the sea of joy (ānandābdhi).

The three attributes generally ascribed to Brahman are Being (sattā), Consciousness (cit) and Joy (ananda). To a Vedantin, the transcendental self is an inexhaustible source of joy. The expression raso vai sah 2 is explained by the Vedantins in such a way as to identify the supreme self with rasa—the joy of all joys. A religious devotee, particularly a Vaisnava, adores a deity who is the repository of all

¹ त्रानन्दमयोऽभ्यासात्।—Vedānta-Sūtra, 1. 1. 12.

² श्रानन्दमयं प्रन्तुल 'रसी वै सः' इति तस्यैव रसलमुक्की चाते 'रसी ह्योवायं यं लब्धा त्रानन्दी भवति ।—Sankara-bhāṣya.

beauty, full of joy and the bestower of all blessings. Sri Kṛṣṇa, as depicted in the Bhagavata, is an incarnation of joy and love, characterised by things that are not only exceedingly beautiful but serve to excite the most pleasant emotions in a moment of deep devotion. the supreme Godhead has any conceivable form, or, to put the idea in a different way, if the formless is at all cognisable in any particular form, it is joy and joy alone. He is, to speak the truth, the embodiment of joy. The rais of the Upanisads have called him rasa and amria-the fountain source of perpetual jov.1 One that dwells in us all is joy 2 itself, serene and supreme; it is the immortal (amrta) in all beings that makes us sometimes joyful even in the midst of cares, and anxieties. What is called multi or final emancipation is only a state of everlasting joy, what the yogins yearn to attain is a serene joy that knows no bounds ; what the artist designs to paint is the image of the one that is most beautiful and joyful; what the poets of all ages have been eager to depict with all their resources of imagination is the figure of perfect beauty and joy. The ultimate motive of all arts is to find out this eternal source of joy, the attainment of which quenches all thirsts and satisfies all mundane desires. To

[ं] सर्व त्रानमननं ब्रह्म and पानन्तं ब्रह्मकी विदान्।—Taittirtyopanisad. * प्रानन्तमध्य सर्वोन्तरवास्।—Sankara-bhāsya.

those who have visualised the Beautiful in themselves, the whole world appears dancing in an ecstasy of divine joy.

Poetry is the expression of such joy. The mission of a poet is to reveal this thrill of joy hidden in the storehouse of nature, touching those tender chords of the heart that are naturally moved by emotions. The poet is a creator in the idealistic sense of the term. his creation being a world of ideal beauty-a dreamland shining with touches of fine imagery. Rasa which forms the life of poetry is brought into existence by the genius of the poet through the suggestiveness of his composition. The imaginative pictures drawn by the poet are different from those that are found in the world of experience.1

The art of poetry seems to have been cultivated in India from a very long time. hymns of the Vedas, which embody the most literary records, are specimens ancient beautiful poetry with considerable amount of rhetorical embellishment here and there. The in their simple flow represent the genuine outburst of a heart seized with extreme joy and wonder, excited by the awe-inspiring splendour of nature on all sides. More poetical

GRAMMAR IN OTHER SYSTEMS OF THOUGHT 329

in outlook are the Rāmāyaṇa and the Mahā-bhārata—two great monumental works in Sanskrit epic poetry, written in simple but elegant style, and preserving a brilliant record of Indian culture in all its phases. These two epoch-making works prepared the ground for the advent of a more advanced type of classical poetry as is evident from the works of Kālidāsa and others. The sweet melody and high-flown similes of Kālidāsa, the pathetic touches of Bhavabhūti and the beautiful expressions of Srīharṣa will continue to keep the poetical horizon of India reverberated for ages to come.

Turning to the definition of $K\bar{a}vya$, we find that it is \$abda and artha that go to constitute a $K\bar{a}vya$. The body 2 of a $K\bar{a}vya$, to use the language of the rhetoricians, is composed of two elements, namely, \$abda and artha, or a combination of words capable of expressing the intended sense. A word, some hold, expressive of a beautiful sense is $K\bar{a}vya$. Visvanātha has laid greater stress on rasa, comprehending it to be the vital element of poetic compositions. To quote his definition, $K\bar{a}vya$ is a combination of words possessing rasa in an appreciable extent.

¹ तददीयी मन्दार्थी सगुणावनलड् ती पुन: क्वापि। — Kāvyaprakāša.

[&]quot; भव्दार्थी वपुरस्य ;—Ekāvalī.

^{*} रमणीयार्थप्रतिपादकः भृन्दः काश्यम् (—Rasagabgādhara. * वाकां रसासकं काश्यम् (—Sābityadarpaņa.

Kāvya is generally divided into two classes, namely, superior and inferior. A poetical composition,1 where the suggested sense appeals more beautifully to our sentiment than the meaning ordinarily expressed by words, is known as the best type of poetry. An inferior class of poetry is one that is characterised by only sonorous words and marked absence of suggestiveness (maximum of words with minimum of sense). Mammata has referred to the grammatical doctrine of Sphota connection with the definition of the superior class of poetry.

The Alamkarikas have divided words into three classes, namely, vācaka (expressive), lākṣaṇika (indicative) and vyañjaka (suggestive). This threefold division, it must be remembered,⁸ refers intrinsically to the designation (upādhi) and not to the object designated (upādheya), because there are no fixed classes of words as denotative, indicative and suggestive. same word, say $Gang\bar{a}$, as in the expression Gangāyām ghosah, may be taken either as denotative or indicative according to the context and propriety of sense. It should be particularly noticed here that vyanjana, as an additional vitti, has been accorded a prominent place only

in the science of Poetics and not in other systems

of thought.

The grammarians have acknowledged sakti (primary signification) and lakşaņā (secondary sense or implied signification), and, consequently, recognised both rācaka and lākṣaṇika na two kinds of words. Laksanā is called by other names also, such as upacāra, āropa, etc., and the sense that is indicated is often called bhakta in philosophical treatises. Gotama 1 has enumerated the causes that give rise to upacara or transference of one's attributes to another.2 Quite in agreement with Gotama and almost in the same language. Patanjali has under the rule Pan., 4, 1, 48, clearly shown the four different circumstances under which Laksana is usually resorted to. Visyanatha's definition of Lakeana is materially the same as suggested by the rhetoricians.

Bhartrhari has divided the meanings of words as gauna (secondry signification) and mukhya (primary signification) and has shown twofold upacāra (imposition) as pertaining to sabda and artha. Those who take one word 5 as capable of expressing several meanings, that is to say,

Nyāya-Sūtra, 2, 2, 63.

^{*} अतहावेऽपि तदुपचार: ।--Ibid.

[°] एकमाहरनेकाथँ ग्रन्टमन्ये परोचकाः।

[.] निमित्तभेदादेकस सावीय तस भिराते ॥-Vākyapadiya, 2, 252.

find only one word like go which is applicable to both cow-individual and Vāhīka, have their theory based on the assumption restricted or accidental meanings.1 It must be, however, remembered that a word does not simultaneously express more than one meaning.2 The other meanings, apart from what is called primary signification, seem to be quite as good by synonyms, comprehensible context or connection with some other words.3 Bhartrhari 4 maintains that the word go which is used to denote a being possessing dewlap, hump, hoofs, etc., is also applied to Vāhīka (an inhabitant of Vāhīka—modern Punjab) on account of his proverbial similarity to an ox in point of dullness. How, then, are we to justify the division of meaning as gauna and mukhya? The first meaning, we must admit, seems to have obtained more currency than the latter, that is to say, the word go is popularly used to denote a cow and implies $V\bar{a}h\bar{i}ka$ only indirectly or accidentally. The author of the Vākyapadīya 5 states clearly that it is popular and accidental usage that renders one meaning mukhya gauna. In connection with imposition (upacāra)

¹ तत्रैकशब्ददर्शने शब्दोपचार: प्रसिद्धप्रसिद्धिनिमित्तक: |--Puṇyarāja.

² यौगपद्मनिक्रस्य पर्याये व्यवतिष्ठते ।—Vakyapadiya.

³ अर्धप्रकरणाभ्यां वा योगाच्छच्दान्तरेण वा ।—Ibid.

यथा सासादिमान् पिखो गीभव्देनाभिधीयते। तथा स एव गोगन्दी वाहीकिऽपि व्यवस्थित: ॥—Ibid.

⁵ प्रसिंडिभेदाङ्गौणलं सुख्यलं चीपपद्यते।—Ibid.

pertaining to artha, Bhartrhari ¹ speaks of two kinds of meanings, namely, $svar\bar{u}pa$ or naturally fixed by its very form and $b\bar{u}hya$ as is indicated by imposition or $upac\bar{u}ra$. The word go denotes a class gotva by the force of $mukhy\bar{u}rtha$, and the same is transferred to $V\bar{u}h\bar{t}ka$ for the purpose of implying the same amount of stupidity and dullness on the part of a $V\bar{u}h\bar{t}ka$. Thus, we find that the \bar{A} lamk \bar{u} rikas not only agree with the grammarians in regard to the circumstances and causes that necessitate the acceptance of $Lak_{\bar{s}}an\bar{u}$, but have made use of the same examples $(Gang\bar{u}y\bar{u}m\ gho_{\bar{s}}ah\ and\ gaurv\bar{u}h\bar{t}kah)$.

The difference is, however, remarkable so far as regards the treatment of vyañjanā in the science of Poetics. Vyañjanā, as distinct from both sakti and Lakṣaṇā, has been given a prominent place in discourses on Poetics, though an additional vṛtti like vyañjanā is not actually accepted by other schools of thought. In accordance with the view of the Ālaṃkārikas, it is Vyañjanā or suggestiveness that gives rise to rasa in all poetical compositions. As sakti and Lakṣaṇā are not sufficient to bring out the sense of cxtreme coldness and sanctity of the Ganges, in the expression Gangāyām ghoṣaḥ, the Ālaṃkārikas were compelled, as it were, to

Valyapadiya, 2, 256.

ष्रयेगच्स्य दिविष: सद्पं वाद्यय। तत्र निमित्ताच्यादारीति वाहीके प्रयतपत्र्यते, शब्दस्य गीलमेवाभिषत्त इति वाद्यायोपचार: (-Pupyarāja,

acknowledge the suggestiveness of words. The Naiyāyikas and the earlier grammarians have not recognised *vyañianā* as an additional meaning like the Ālamkārikas.

Jagadīśa has referred to the same example mukham vikaśitasmitam (face blooming with a smile) whereby suggestiveness has been established by Mammata and others, and discussed at length whether vyañjanā is at all worthy of recognition. There is no justification, he argues, to recognise the existence of something like suggestiveness, so far as the direct or indirect meaning of a word is concerned. The so-called suggested sense, i.e., extreme coldness and sanctity, or fragrance (i.e., the smiling face is as fragrant as flowers) is derivable by the usual mental cognition, the special beauty of the erotic sentiment (camatkāra) being a matter of mental apprehension (mānasa-bodha).

The meanings of words,⁴ says Bhartrhari, are not only determined by their very forms, but there are other instruments such as sentence, context, time, place, etc., which also help us

GRAMMAR IN OTHER SYSTEMS OF THOUGHT 335

in ascertaining the intended sense, specially when a word happens to have more than one meaning. When the primary signification of a word having several meanings is fixed or restricted by association, etc. (as shown by Bhartrham), the other meanings, holds Mammata, are to be regarded as suggested (cyangya). This is called suggestion based on primary sense in the science of Poetics.

There is no evidence to believe that ryanjana was ever recognised by the ancient grammarians, Among the grammarians, Nages 1 has definitely supported vyaniana, and he lays much emphasis on the desirability of acknowledging it from the standpoint of grammar.2 Nagesa has, however, tried to show that he was not the first among the grammarians to recognise vyañianā as such. In accordance with his interpretation, the grammarians,3 like Bhartrhari and others, have also indirectly referred to quantiana by supporting indicativeness (dyotakatva) of the Niputas and taking sphota as what is suggested by sound. With Nageśa, dyotakatva is the same as vyanjakatva. The sense of perfection in prajayati and that of measuring in pradesam vilikhati is nothing but suggested. because laksanā in such cases is not admissible

^{&#}x27; जनेकार्यस्य गच्दस्य वाचकले नियम्ति । स्थोगार्यस्वाचार्यभोक्षद्वाप्तिरञ्जनम् ॥—ार्वस्थवन्तर्वेक, 1. 10

अत्तर्व निपातानां योतकलं स्कीटस व्यक्त्यता च इंगैदिभिरुका—Ibid.

owing to the absence of primary signification on the part of Nipātas. Thus, what we call dyotakatva in connection with Nipātas and ākṣepakatva in relation to Karmapravacanīya are only different in names, but indicate the same thing, viz., suggestiveness (vyanjakatva).

The science of Poetics comes in closer touch with grammar in regard to the problem of rhetorical defects (dosa). The entire discourse on dosa is more or less grammatical in nature. The most prominent among them are as follows: cyutasamskṛti 1 (ungrammatical form) such as anunāthate for anunāthati; aprayukta sanctioned by popular usage) as daivatah; for daivatam; asamartha (incompetent) as hanti in the sense of gacchati; nirarthaka (meaningless) as hi in mama hi gauri; avācaka (not capable of expressing the sense), as the use of the word dina in the sense of 'bright'; avimṛṣṭavidheyāmśa (to place the predicate before the as nyakkāro'yameva instead \mathbf{of} nyakkārah, etc. It must be, however, remembered that these and similar other grammatical mistakes were committed by the poet almost unconsciously. Poets found it often difficult to abide by the rigid rules of grammar, and even the most famous of our poets had the boldness of using certain forms in direct violation of the rules of grammar. This is why Mallinātha often calls them nirankuśa (ungovernable).

² Kāvyaprakāśa, 7.

GRAMMAR IN OTHER SYSTEMS OF THOUGHT 337

The beautiful poetry of the Vedas exhibits a considerable amount of rhetorical excellence. Sometimes-we meet with examples of beautiful similes and metaphors in the hymns. The poets of the Rk-Veda have not only poured forth ritualistic prayers and invocations to the forces of nature, but also succeeded in giving a stamp of poetical beauty to their expressions by making use of some well-conceived figures of speech, mostly similes and metaphors. The sun-god 1 (riding in a chariot drawn by seven horses) running after the resplendent Dawn (usas) is compared to a man following a beautiful woman. How brilliant is the conception with a touch of classical beauty! Again. the goddess of Vak 2 is described as unfolding her graceful person to a learned man, just as a loving wife dressed in fair garments shows herself to her husband. We have other instances of beautiful similes in the following: 'just as one' sifts the barley corn by means of a sieve, even so the wise discriminates the correct words by intelligence;' 'as the water of a pond is agitated by a strong wind;' and 'overcoming ' the sins just as crossing a river by means of a boat.' A wallchosen metaphor conveniently used in the Upanisads to show the difference between

[े] सूर्यों देवीसुपर्स रोचमाना मध्यों न योपामधीत प्यात्।—Bk. Veda, 1. 10.

उत्ती लक्षे तन्त्रं विसन्ते आधेव पत्र चत्रती सुवासः::— Rk-Veds, 10 6, 71, स्मानिव वितउना पुनन्ती यद धीरा मनसा वाषमञ्जतः ।— Ibid.

jīvātman and paramātman is as follows: 'two beautiful 1 birds related to each other by mutual friendship reside in the same tree, one of them eating the sweet fruit (pippala) and the other only witnessing without partaking of the There are other instances of beautiful upamā such as hamsāviva patatamā (falling like swans), simho na bhīmā āyudhāni bibhrat (holding dreadful as lions) and so on. weapons as Here and there we meet with brilliant poetic expressions as amrtasya putrāh (the children of the immortal); rtasya panthamanveti sadhu (following the path of righteousness); rtena rtamapihitam (truth veiled by truth); dūto devānāmasi (Agni is described as the messenger of the gods) and dyaurvalı pitā pṛthivī mātā (heaven is your father and the earth is your mother). These show unmistakably that the Rsis Rk-Veda were acquainted with the poetical use of beautiful metaphors.

Grammar seems to have some bearing upon alamkāra or figures of speech, specially upon upamā. As one radically connected with most of the alamkāras and one that lends supreme excellence to poetry in general, upamā is placed at the head of all figures of speech. The main principle underlying upamā, viz., similarity³.

· between two different objects (samāna-dharma), has been clearly explained by the rules of grammar (Pān., 2.1.55 and 2.1.56), Sādršya or similarity means tadbhinnatve sati tadgatabhāyodharmavattvam, viz., two things are said to be similar when they are materially different but possess some common properties. The particles and suffixes that often indicate similarity (vati, iva, yathā) are also clearly shown by the rules of grammar (Pan., 5.1.105). Jimūtasyeva (like the cloud) occurs in the Rk-Veda and has been made use of by the grammarians as an instance where the caseending is not dropped (nitya-samāsa). The expression puruşavyaqlıralı (a tiger-like man) shows that the man, though different from the tiger, as belonging to two distinct species, possesses those qualities such as valour, strength, courage, etc., which are generally found in the tiger. Under the rule upamānāni sāmānyavacanaih (Pān., 2.1.55), Pataujali 1 has thoroughly dealt with the characteristics of upamāna and upameya. He says that two things are generally related to each other as upamāna and upameya when they are in possession of some properties that are common to both. Quite in keeping with the Alamkārikas, Patanjali 2 has explained

[े] एवं तर्ति यत किंचित् सामानं करिश्व विशेषस्त्रोपमानोपसिये भवतः।— Mahābhāṣya, undar the rule Pāp, 2 1.55.

340 PHILOSOPHY OF SANSKRIT GRAMMAR

the expression candramukhī devadattā by observing that qualities in the moon such as gracefulness to the sight is transferred to the face on account of its striking similarity with the moon. The popular example under the rule Pān., 2. 1. 55, i.e., ghanaśyāmaḥ¹ (black as the cloud), where the common property is expressly mentioned, is an attribute of Kṛṣṇa, who is often compared to a cloud on account of his black complexion. The Vedic expression² mṛgo na bhīmaḥ (fierce as the beast) is a similar instance where the common property, i.e., dreadfulness is clearly pointed out.

Anipsita, a variety of Karman, 268

of

οf

Anirakartr, a kınd Sampradana, 238

Anitya, a kind of Samāsa, 305

Anumantr, a kınd Sampradana, 280

Anyapadärthapradhäna, class of Samäsa, 301.

Anyapürvaka, a variety 'of Karman, 268

Apaddad, a Kirola—
discursion on 2704;
Pagnai's definition of,
2701; three linds of,
271.

Apeksital riya, a linl cf Apadina, 271.

Antaranga, a variety of Karman, 200.

Audāsinya, a variety ci Karman, 209

Aupallegila, a variety of Admi arona 255

Bahiranga, a variety o Karman, 269,

Bhāvārthādhl arara, section of Mimāms; deship with the relation of noun or serb to Apūre; 822,

Class theory of the sense of words, 111

Driliyā ribhalli, rarious meanings of, 199f

El arthibhavavadina, 307.

Grammatical gender, meaning of, 107ff

Hetu, various meanings of 252f.

Individualistic theory of the sense of words, 41f.

Jahatsvārthā, a hind of Vītli, 201.

Kalma, a form of Karman, 270. Kārakas, number and classification of, 227f; definitions of, 216ff;—according to Patanjali, 216f;—according to Durgasimha, 288f; according to Jagadīśa, 219f.

Kāraka-vibhakti, 199.

Karana, a Kāraka—
discussion on, 264ff;
difference with Hetu
of, 251f; logical definition of 250; relative
importance of, 249.
Karman, a Kāraka—

discussion on, 257ff; Pāṇini's definition of, 257f; Kātantra's definition of, 248f. Logical definition of, 258ff; wide application of, 262; seven forms of, 262ff; other divisions of, 268ff.

Karmapravacanīya, the sense of Ākṣepakatva of— 336.

Kartr, a Kāraka,
discussion on 228; independent character of,
228ff; reducibility of
other Kārakas to, 217;
logical definition of,
244ff.

Kṛt suffixes—sense of Bhāva 210ff; Bhāva of two kinds, 210.

Kṛtrima-karman, kriyā regarded as, 276.

Kriyā, meaning of. 218ff; regarded as an artificial object, 176.

Lakāras, sense of, 205.

Mīmāṃsā, doctrines of, in Grammar, 315ff.

Nipāta, sense of dyotaliatva of, 336.

Nitya, a kind of Samāsa, 305.

Nirdristavisaya, a kind of Apādāna, 274.

Nirvartya, a variety of Karman, 203ff.

Nyāya, a system of philosophy, contribution of, to the

study of Grammar,323ff.

Pada vādin, 58f.

Pañcamī, various senses of, 210f.

Paribhāṣā, meaning of, 69f; classes of, 70f. 72. Parts of speech, four men-

tioned by Yāska. 136-149; twofold and fivefold division of, 165; mean ings of the four classes of, 150ff.

Prākṛta, origin of, 11.

Prāpya, a variety of Karman, 267f.

Prakrti (stems) and Pratyaya (suffixes), meaning and mutual relation of, 139ff.

Pratyayas, varieties of 196; meanings of different classes of, 197ff.

Preraka, a kind of Sampradāna, 280.

Pūrvapadārthapradhāna, a class of Samāsa, 303.

Sabdakhaṇḍa, section of the Tattvacintāmaṇi,

—grammatical problems dealt with in, 324f.

Sakti, meaning of caseendings, 202. Samāsa, occasions of, 282ff; divisions of, 305f; sense of, 306f; four characteristic senses of, 304.

Samāsa šaktīvadīns, 306

Samgraha, a work on grammar, 27.

Samipaka, a variety of Adhi karana, 255.

Saminā, nature of, 61f, Classes of (1) Krtirma and akrtirma, 66, (2) significant and meaningless, 68, (3) Naimittikī etc, 69

Sampradana, a Karaka,

discussion on, 274ff, signi fication of the term, 275, three kinds of, 280.

Samarthya, various mean ings of, 283

Sandhi, meaning and definition of, 6; fundamental condition of, 78ff; different classes of, 82f.

Saptami, the seventh case termination — meaning of 255, use in various senses of, 256.

Sanskut Grammar, origin, of 4ff, origin of the different systems of, 10ff different systems of, 10ff different epithets of 10, 18, 22, 42, first author of 16f, need of the study of 18ff, speculations in Vede literature on 19ff; identified with Smrt 19,—with Veda or Agam 10, 22, 35, relation of, with Mimamsa 315f, with Myāya 323f, Alahkūra 325f.

Sphofa, theory of the origin of, 85f; identity with Pranava of 87f, derivative meaning of 91; characteristics of, 99; views of Bhartrham on, 100ff; views of Intergrammarians on, 107ff, forms of, 109, non mention of, in the Upanisad 90.

Sphotavāda, examination of the views of different philosophical systems on, 110ff.—Yoga system, 111,—Sūṃkhya, 112ff,— Mimūmsā, 111ff.— Vedānta, 116ff,—Nyāyavaišesika, 110ff.

Sutra, characteristics of, 73, classes of, 74.

Taddhita suffixes, kinds of, 206, sense of tva, and tal, 207ff.

Trimuni vyākarana, an epithet of grammar, 30, 303

Tritiyā, various meanings of,

Sarvaapadarthapradhāna, e class of Samūsa, 304

Upapada vibhakti, 199

Upasarjana, a subordinate member in a compound, 289

Uttarapadarthapradhāna, characteristic sense of a class of Samāsa, 303

Uttarāvidyā, epithet o Grammar, 42

Vaisayıka, a variety of Adhikarana, 255, Vāg-yogavit, epithet of a grammarian, 20.

Vākya, sentence,—views on its real nature. 128ff.

Vākyavādin, 57f.

Vedānām Vedam, epithet of grammar, 10, 22.

Vedas, relation with grammar of, 3f.

Vikārya, a variety of karman, 265f.

Vrtti, as Samāsa, 298.

Vyādi, a grammarian, 13,27.

Vājapyāyana, gram- \mathbf{a} marian, 13, 27.

Vyākaraņa, connotation of, 75f.

Vyākaraņādhikaraņa, section on grammar in Mīmāṃsāsūtras, 319ff.

Vyākaraņāgama, 35.

Vyākaraņasmṛti, 19.

Vyāpaka, a variety of Adhikarana, 254f.

Vyapeksāvādins, 307.

Vyāsa, a sentence, difference between Vyāsa Samāsa, 289.

Words, theories regarding the sense of 44; classification of, 170f.

(1) Nāman, Tātipadika, Linga (nom pal base), definition of 70ff; classification of 73ff; meaning of 1,6ff; various theorie f, 184ff.

(2) Dhātu (verbal root), 191ff; meaning of, 192ff, 194; definitions of, 194.

EXTRACTS FROM OPINIONS ON THE WORKS OF THE AUTHOR.

1 The Philosophy of Sanskrit Grammar—(published by the University of Calcutta)

Mahamahopadhyaya Ramavatara Sarma, Sahityacarya, M.A., Senior Professer of Sanskrit Patna College -

"I hat an opportunity of going through the papers on the Philosophy Sauskrit Grammar written by Dr. Prabbat Chandra and capacity it search He has selected a rather difficult field for his study but has a sady dealt with it with throughness marvellous for his age and limited resources available in the country"

Prof S, N Dasgupta, MA, Ph D (Cal), Ph D (Cantab), IES, Professor of Philosophy, Presidency College -

"Dr Prabhat Chandra Chakrabarti, M A, Ph D has been making a special study of Pannis & Grammar, the Mahābhatya of Patāṇjati, the Vakyapadiya of Bhartthari and other kindred works on gramma tical literature and philosophy of grammar. He has been the first man to undertake a study of philosophy of grammar a difficult and abstruse line of research, in which no work has hitherto been done either in Europe or in India."

2 Linguistic Speculations of the Hindus (published in the Journal of Letters, Calcutta University, Vol. XII 1925)

Mahamahopadhyaya Dr Ganganath Jha, M A., D Latt, Vice Chancellor, Allahabad University —

'I have formed the impression that it was an important piece of research on a subject to which practically no attention had been given till now, it also evinced the promise of a very important and fascinating field of study and research. I hope you will be soon placed in a position where you will be sufficiently free from cares to be able to devote your entire attention to your important studies and research."

A. Barriedale Keith, Regius Professor of Sanskrit and Comparative Philology at the University of Edinburgh, :--

"I have read your papers with care and I consider that they set, forth in a clear and effective manner the fundamental doctrines of Indian speculations on questions of Speech. The adduction of the evidence of the Mahābhāṣya and of the Vākyapadīya is specially interesting and valuable, and all who are interested in linguistic matters must be glad to have so convenient a summary, disengaged from the unnecessary detail, of the views of Sanskrit grammarians."

M. Winternitz, Ph. D., Professor of Indian Philology and of Ethnology at the German University of Prague:—

"It is not too much to say that grammar is the only science in which the ancient Indians by forury sed all other nations of antiquity. No wonder that both grammarians and philosophers were not content with studying the grammar of Sanskrit, but also occupied themselves with speculations on the science of language. Your papers are a valuable contribution to our knowledge of these speculations. It is interesting to see how these problems have been approached from different points of view by grammarians, philosophers and students of poetics,

L. D. Barnett of the British Museum :-

"I think your work a very instructive and useful statement of the leading facts."

Journal of the Royal Asiatic Society, January 1926, pages 123-124 (reviewed by J. Charpentier)—

"It seems that the author has stated his points in a fairly clear way, and has given an analysis of the often very intricate linguistic speculations belonging to the ancient schools of Hindu grammarians and philosophers."

Bulletin of the School of Oriental Studies-Vol. IV, part II, Nov. 1926. pp. 377-379-

"This work is an interesting contribution to the history of linguistics and is an attempt to bring into a consistent whole the linguistic theories of arcient Hindu philosophers and grammarians. The author gives a fairly complete exposition of Hindu theories on the origin of language and his treatment of the well-known controversy on the eternity of sound shows considerable freshness and sound judgement."

Dr V Lesny, Professor of Indian Philology in the University of Prague :-

"Your essay is an able enrichment of our grammatical studies."

3 The Mahabhasya of Patanjall-Ahnika I

Translated into English for the first time with historical, gramma tical, philological and philosophical notes

E J Thomas, M A D Litt, Senior Under Librarlan, Cambridge University -

"It is a work thoroughly worth doing, first because a good translation like yours with your valuable and exhaustive notes will form the best possible commentary for ordinary students of this great work.

Further the translation will be invaluable to others who are studying Indian history and antiquities, and you would make it accessible to those who are not prepared to dive into the original I have examined the part you have completed, and think it very ably done. I hope you will stick to your purpose to translate the whole and thus establish a place for yourself in Sanskrit scholarship and confers a great boon on western scholars.

A B Keith, Edinburgh -

"I am very glad that a scholar has at last appeared with the leisure and equipment sufficient to undertake the task of translating the Mahabhāya which remains largely a closed book for the world of scholarship I have no doubt that you will accomplish a work of the highest importance in the field of Sanskrit grammer"

Mahamahopadhyaya Dr Ganganath Jha, M A , D Litt -

"Many thanks for the specimen pages of your valuable work on he Mahabhäya I hope you will be given the time and the facility for completing this work on the magnificent scale on which you have begun it"

Prof. E J Rapson :-

"All that I can say is that your translation of the Mahabhaya will be most useful and most welcome. It is a difficult work, and I most cordially wish you all success in your great undertaking."

SYSTEM OF VEDANTIC THOUGHT AND CULTURE. (AN INTRODUCTION TO THE METAPHYSICS OF ABSOLUTE MONISM OF SANKARA SCHOOL). By Mahendranath Sarkar, M.A., Ph.D., Professor of Philosophy, Sanskri College, Calcutta. Demy 8 50. 220 50. 320 50. 320 50. 320 50.

250 PHILOSOPHY OF SANSKRIT GRAMMAR

In accordance with the definition as suggested by the Naiyāyikas, Karaņa is the same as Kāraņa (vyāpāravat kāranam karanam) only with this difference that karana is closely associated with the action, i.e., cause, when it is actually in operation to bring about the accomplishment of the action, is what is called karana in grammar. Gadādhara maintains that the words vyāpārādhīnatva should be added to the definition (vyāpāravat kāraņam karanam) so as to clearly indicate the subserviency of Karana to the agent. An accessory (as Karana), as we find, cannot accomplish the action unless and until it is set to work by the agent (kartyviniyoga). This being the actual state of things, one may possibly bring forward the argument that it is more plausible to attribute the adjunct sādhakatama to the agent itself in preference to Karana.1 Bhartrhari 2 meets this objection by saying that the primary function of the agent is to employ the accessories to operation 3 which, thus engaged, immediately accomplish the action. This is to show how Karana comes between the agent and the action, and, consequently, has greater proximity to theoperation than the agent itself.

¹ कर्नविनियोगीत्तरकाली साधनानां प्रवत्तीसदपेचया कर्नेरेव साधकतमलं न्याध्यमिति—Helaraja.

² खातन्तेर्राप प्रयोक्तारसारादेवोपक्तवते। करणेन हि सर्वेषां व्यापारी व्यवधीयते॥—Vakyapadīya, 3.93.

³ विनियोगी हि कतेव्याणारः।

Now it is sufficiently clear why Karana is said to be sādhakatama in relation to other accessories. Bhartrhari has again alluded to the preponderance of vivakṣā and the difference between the agent and Karana by referring to the example asischinatti (where the function of the agent has been attributed to the instrumental, viz., sword, with a view to indicate the independent activity or excessive power for accomplishing the action on the part of Karana). In the above example, it should be noted, the sharpness of the sword comes to be regarded as Karana when the sword itself is used as the agent.

Though apparently synonymous, hetu and Karana are, however, distinguished by the grammarians, the criterion of such difference being the invariable association with the action on the part of Karana. The first and foremost thing necessary for a Kāraha is to have close relation with the action. Hetu generally gives the idea of a substance and has practically no invariable connection with the action. Bhattoji has clearly elucidated this distinction. A substance unconnected with action is called hetu, but Karana, as a form of Kāraha, is
